## United States COVID-19 Cases and Deaths by State

Maps, charts, and data provided by the CDC, updated daily by 8 pm ET<sup>†</sup>

TOTAL CASES

27,542,421

+56,384 New Cases

CASES PER 100,000 PEOPLE

8,296

TOTAL DEATHS

485,070

+1,217 New Deaths

CDC | Updated: Feb 16 2021 12:28PM

**View:**

☒ Cases

☐ Deaths

**Time period:**

☐ Last 7 Days

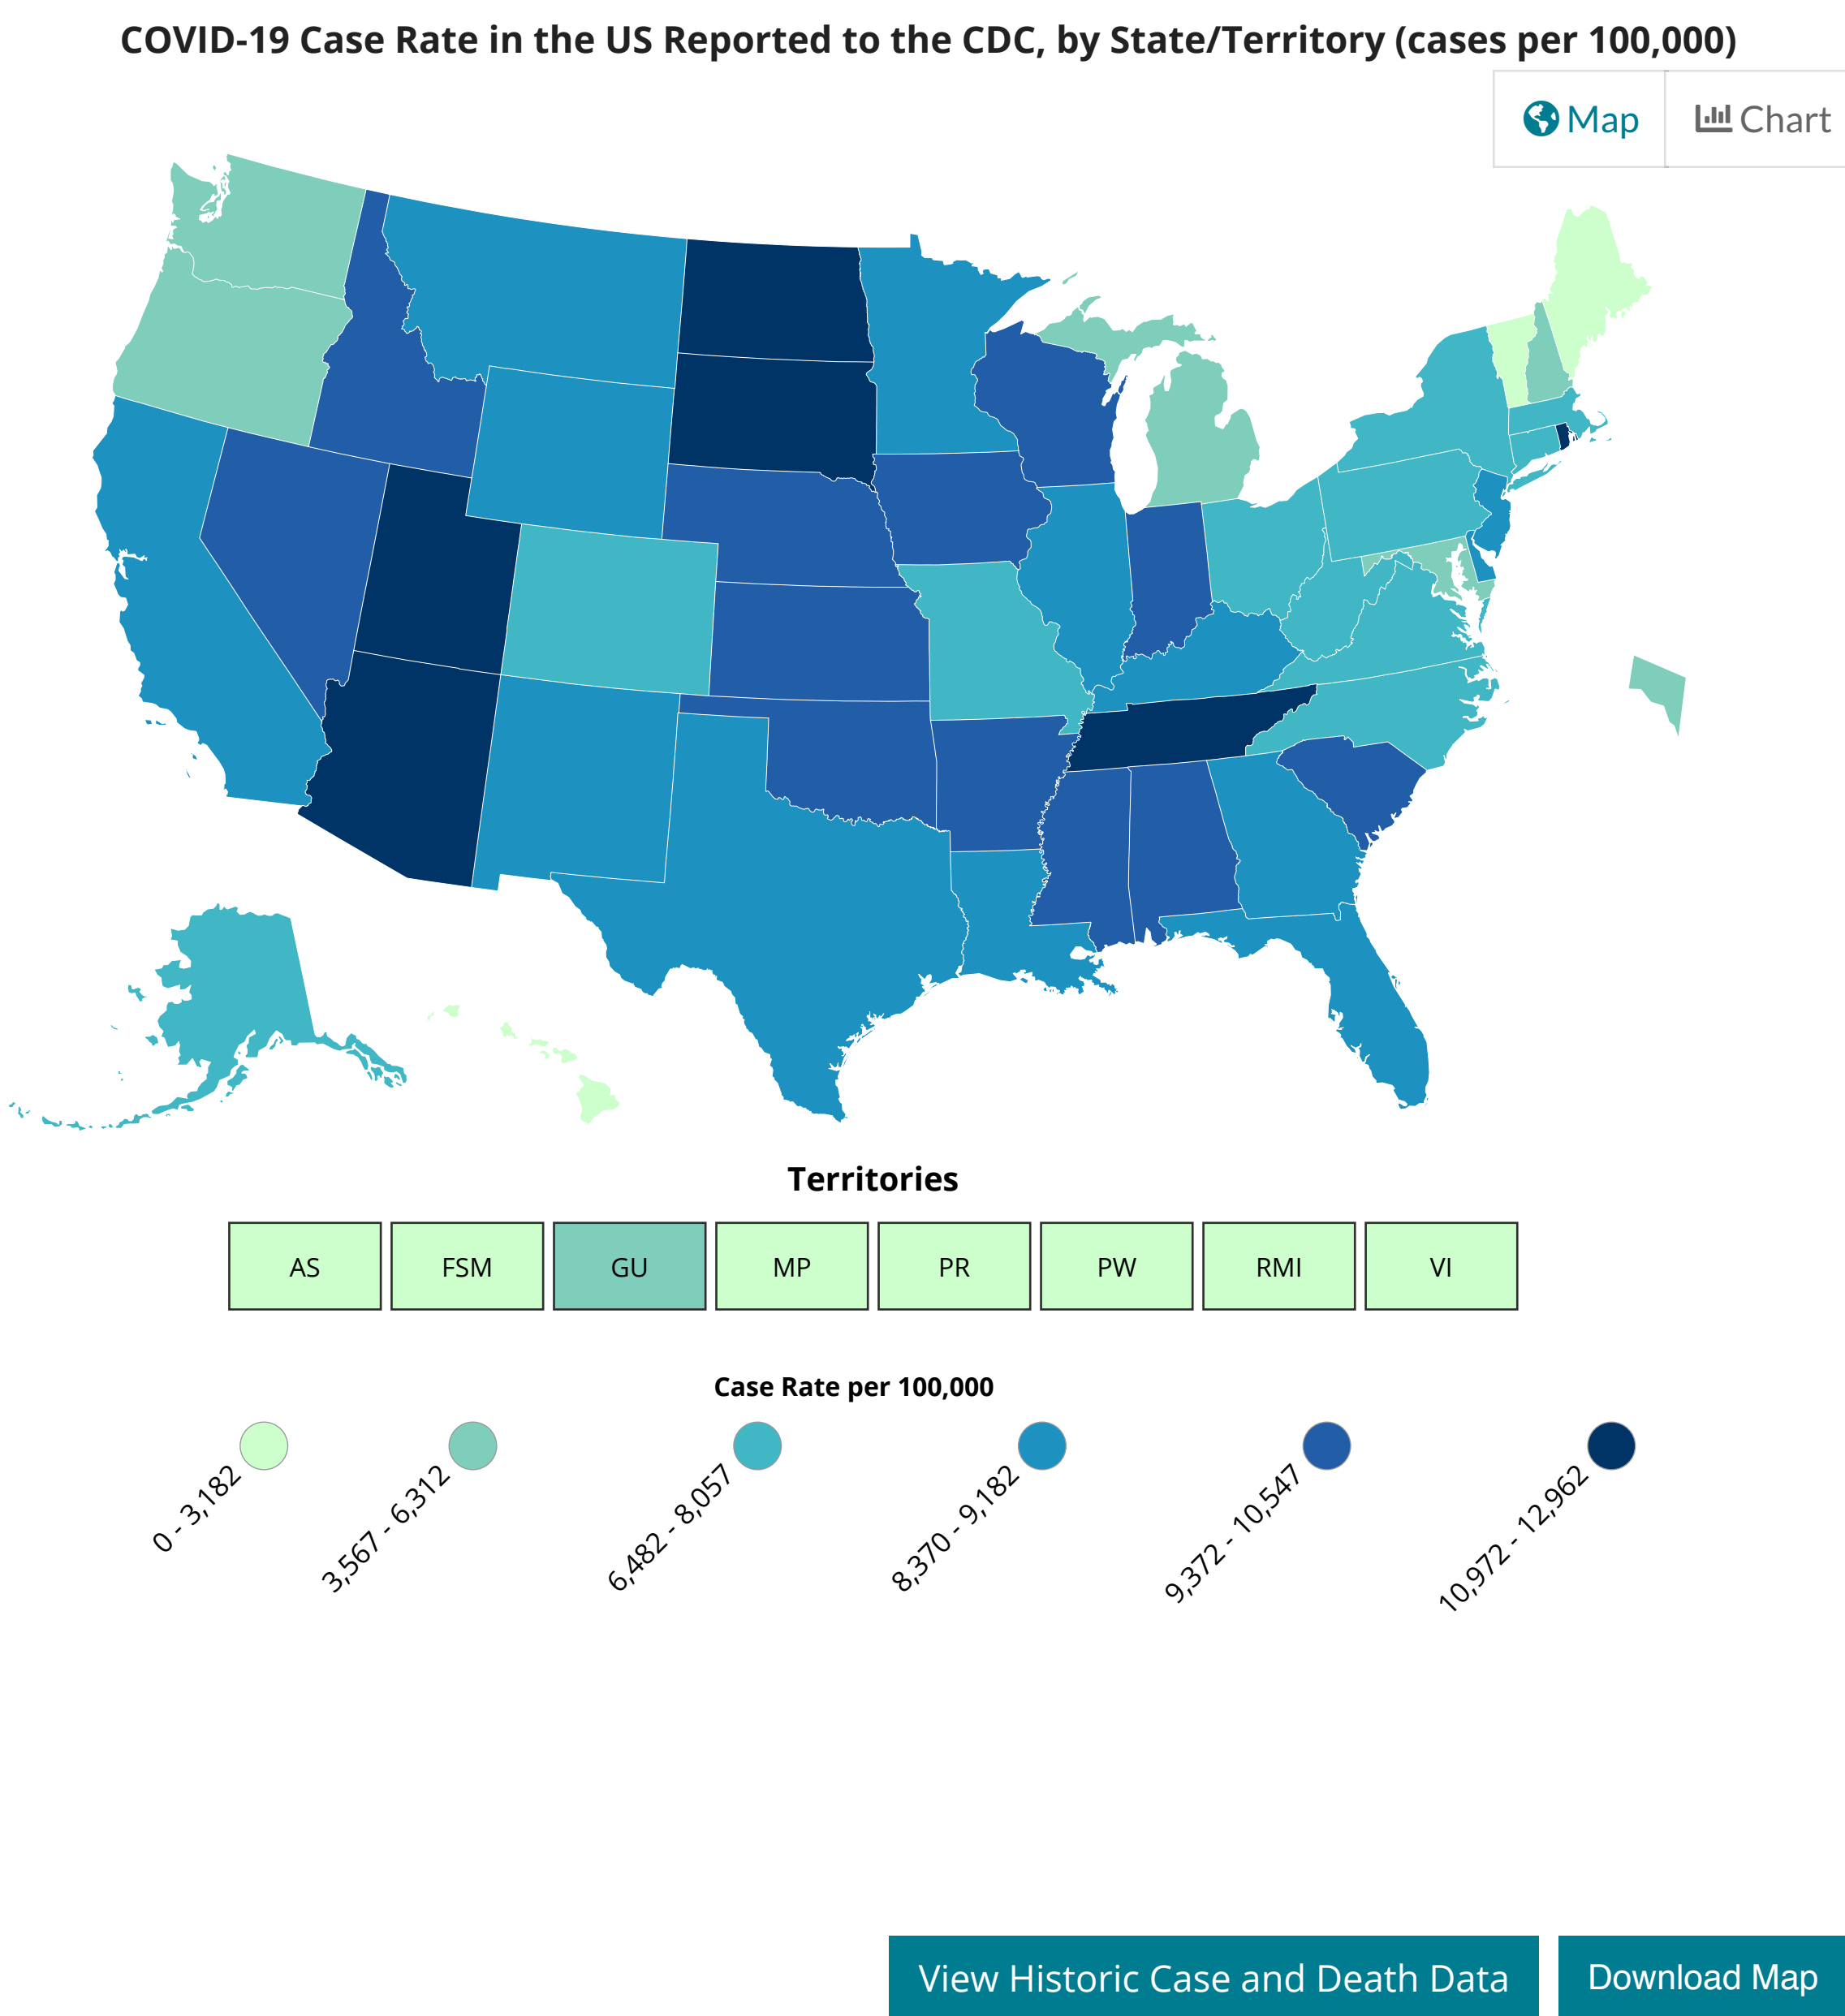

☒ Since Jan 21, 2020

**Metric:**

☐ Count

☒ Rate per 100,000

This shows the number of cases since the pandemic started for every 100,000 people, allowing you to compare areas with different population sizes.

### Data Table for Case Rate by State/Territory

CDC | Updated: Feb 16 2021 12:28PM

State/Territory ↕	Case Rate per 100,000 ↕
North Dakota	12,962
South Dakota	12,477
Rhode Island	11,496
Utah	11,284
Tennessee	11,108
Arizona	10,972
Oklahoma	10,547
Iowa	10,442
Wisconsin	10,436
Arkansas	10,383
Nebraska	10,206
Kansas	9,867
Alabama	9,822
Mississippi	9,701
Indiana	9,650
South Carolina	9,498
Nevada	9,374
Idaho	9,372
Illinois	9,182
Wyoming	9,181
Montana	9,126
Georgia	9,106
Louisiana	9,043
Texas	8,842
Kentucky	8,719
California	8,621
New Mexico	8,621
Delaware	8,548
New Jersey	8,415
Minnesota	8,408
Florida	8,370
New York City*	8,057
Ohio	8,052
New York*	7,911
North Carolina	7,860
Massachusetts	7,844
Missouri	7,693
Connecticut	7,580
Alaska	7,420
Colorado	7,196
West Virginia	7,136
Pennsylvania	7,006
Virginia	6,482
Michigan	6,312
Maryland	6,157
District of Columbia	5,526
New Hampshire	5,223
Guam	4,646
Washington	4,319
Oregon	3,567
Maine	3,182
Puerto Rico	3,078
Virgin Islands	2,428
Vermont	2,222
Hawaii	1,843
American Samoa	7
Republic of Marshall Islands	7
Federated States of Micronesia	1
Northern Mariana Islands	0
Palau	0

<sup>†</sup>Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

On 4 February 2021, a state reported 1,507 new deaths. CDC is working with the state to assess the time period from which these data cover. This may temporarily impact death counts, rates and averages.

**Data Sources, References & Notes:** The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020 . However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). Totals per 100,000 people in the last 7 days are calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019\* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019\* American Community Survey 1-year estimates.

\*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID-19 Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
