United States COVID-19 Cases and Deaths by State

Maps, charts, and data provided by the CDC, updated daily by 8 pm ET†

TOTAL CASES 27,600,391 +57,970 New Cases	CASES PER 100,000 PEOPLE 8,313	TOTAL DEATHS 486,466 +1,396 New Deaths
--	---	--

CDC | Updated: Feb 17 2021 1:35PM

View: Cases Deaths
Time period: Last 7 Days Since Jan 21, 2020
Metric: Count Rate per 100,000

This shows the number of cases since the pandemic started for every 100,000 people, allowing you to compare areas with different population sizes.

COVID-19 Case Rate in the US Reported to the CDC, by State/Territory (cases per 100,000)

Data Table for Case Rate by State/Territory

CDC | Updated: Feb 17 2021 1:35PM

State/Territory ↕	Case Rate per 100,000 ↕
North Dakota	12,978
South Dakota	12,501
Rhode Island	11,523
Utah	11,302
Tennessee	11,122
Arizona	10,987
Oklahoma	10,571
Iowa	10,456
Wisconsin	10,450
Arkansas	10,389
Nebraska	10,207
Kansas	9,867
Alabama	9,840
Mississippi	9,724
Indiana	9,663
South Carolina	9,526
Idaho	9,398
Nevada	9,384
Wyoming	9,218
Illinois	9,193
Montana	9,138
Georgia	9,133
Louisiana	9,043
Texas	8,854
Kentucky	8,746
California	8,635
New Mexico	8,635
Delaware	8,562
New Jersey	8,456
Minnesota	8,416
Florida	8,399
New York City*	8,094
Ohio	8,070
New York*	7,939
North Carolina	7,879
Massachusetts	7,858
Missouri	7,703
Connecticut	7,596
Alaska	7,482
Colorado	7,207
West Virginia	7,149
Pennsylvania	7,024
Virginia	6,509
Michigan	6,324
Maryland	6,169
District of Columbia	5,545
New Hampshire	5,238
Guam	4,647
Washington	4,330
Oregon	3,577
Maine	3,189
Puerto Rico	3,082
Virgin Islands	2,428
Vermont	2,230
Hawaii	1,844
American Samoa	7
Republic of Marshall Islands	7
Federated States of Micronesia	1
Northern Mariana Islands	0
Palau	0

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

On 4 February 2021, a state reported 1,507 new deaths. CDC is working with the state to assess the time period from which these data cover. This may temporarily impact death counts, rates and averages.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). The average daily rate per 100,000 people in the last 7 days is calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). The 7-day cumulative rate is calculated as (current day + 6 preceding days) per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019* [American Community Survey 1-year estimates](#).

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
