## United States COVID-19 Cases and Deaths by State

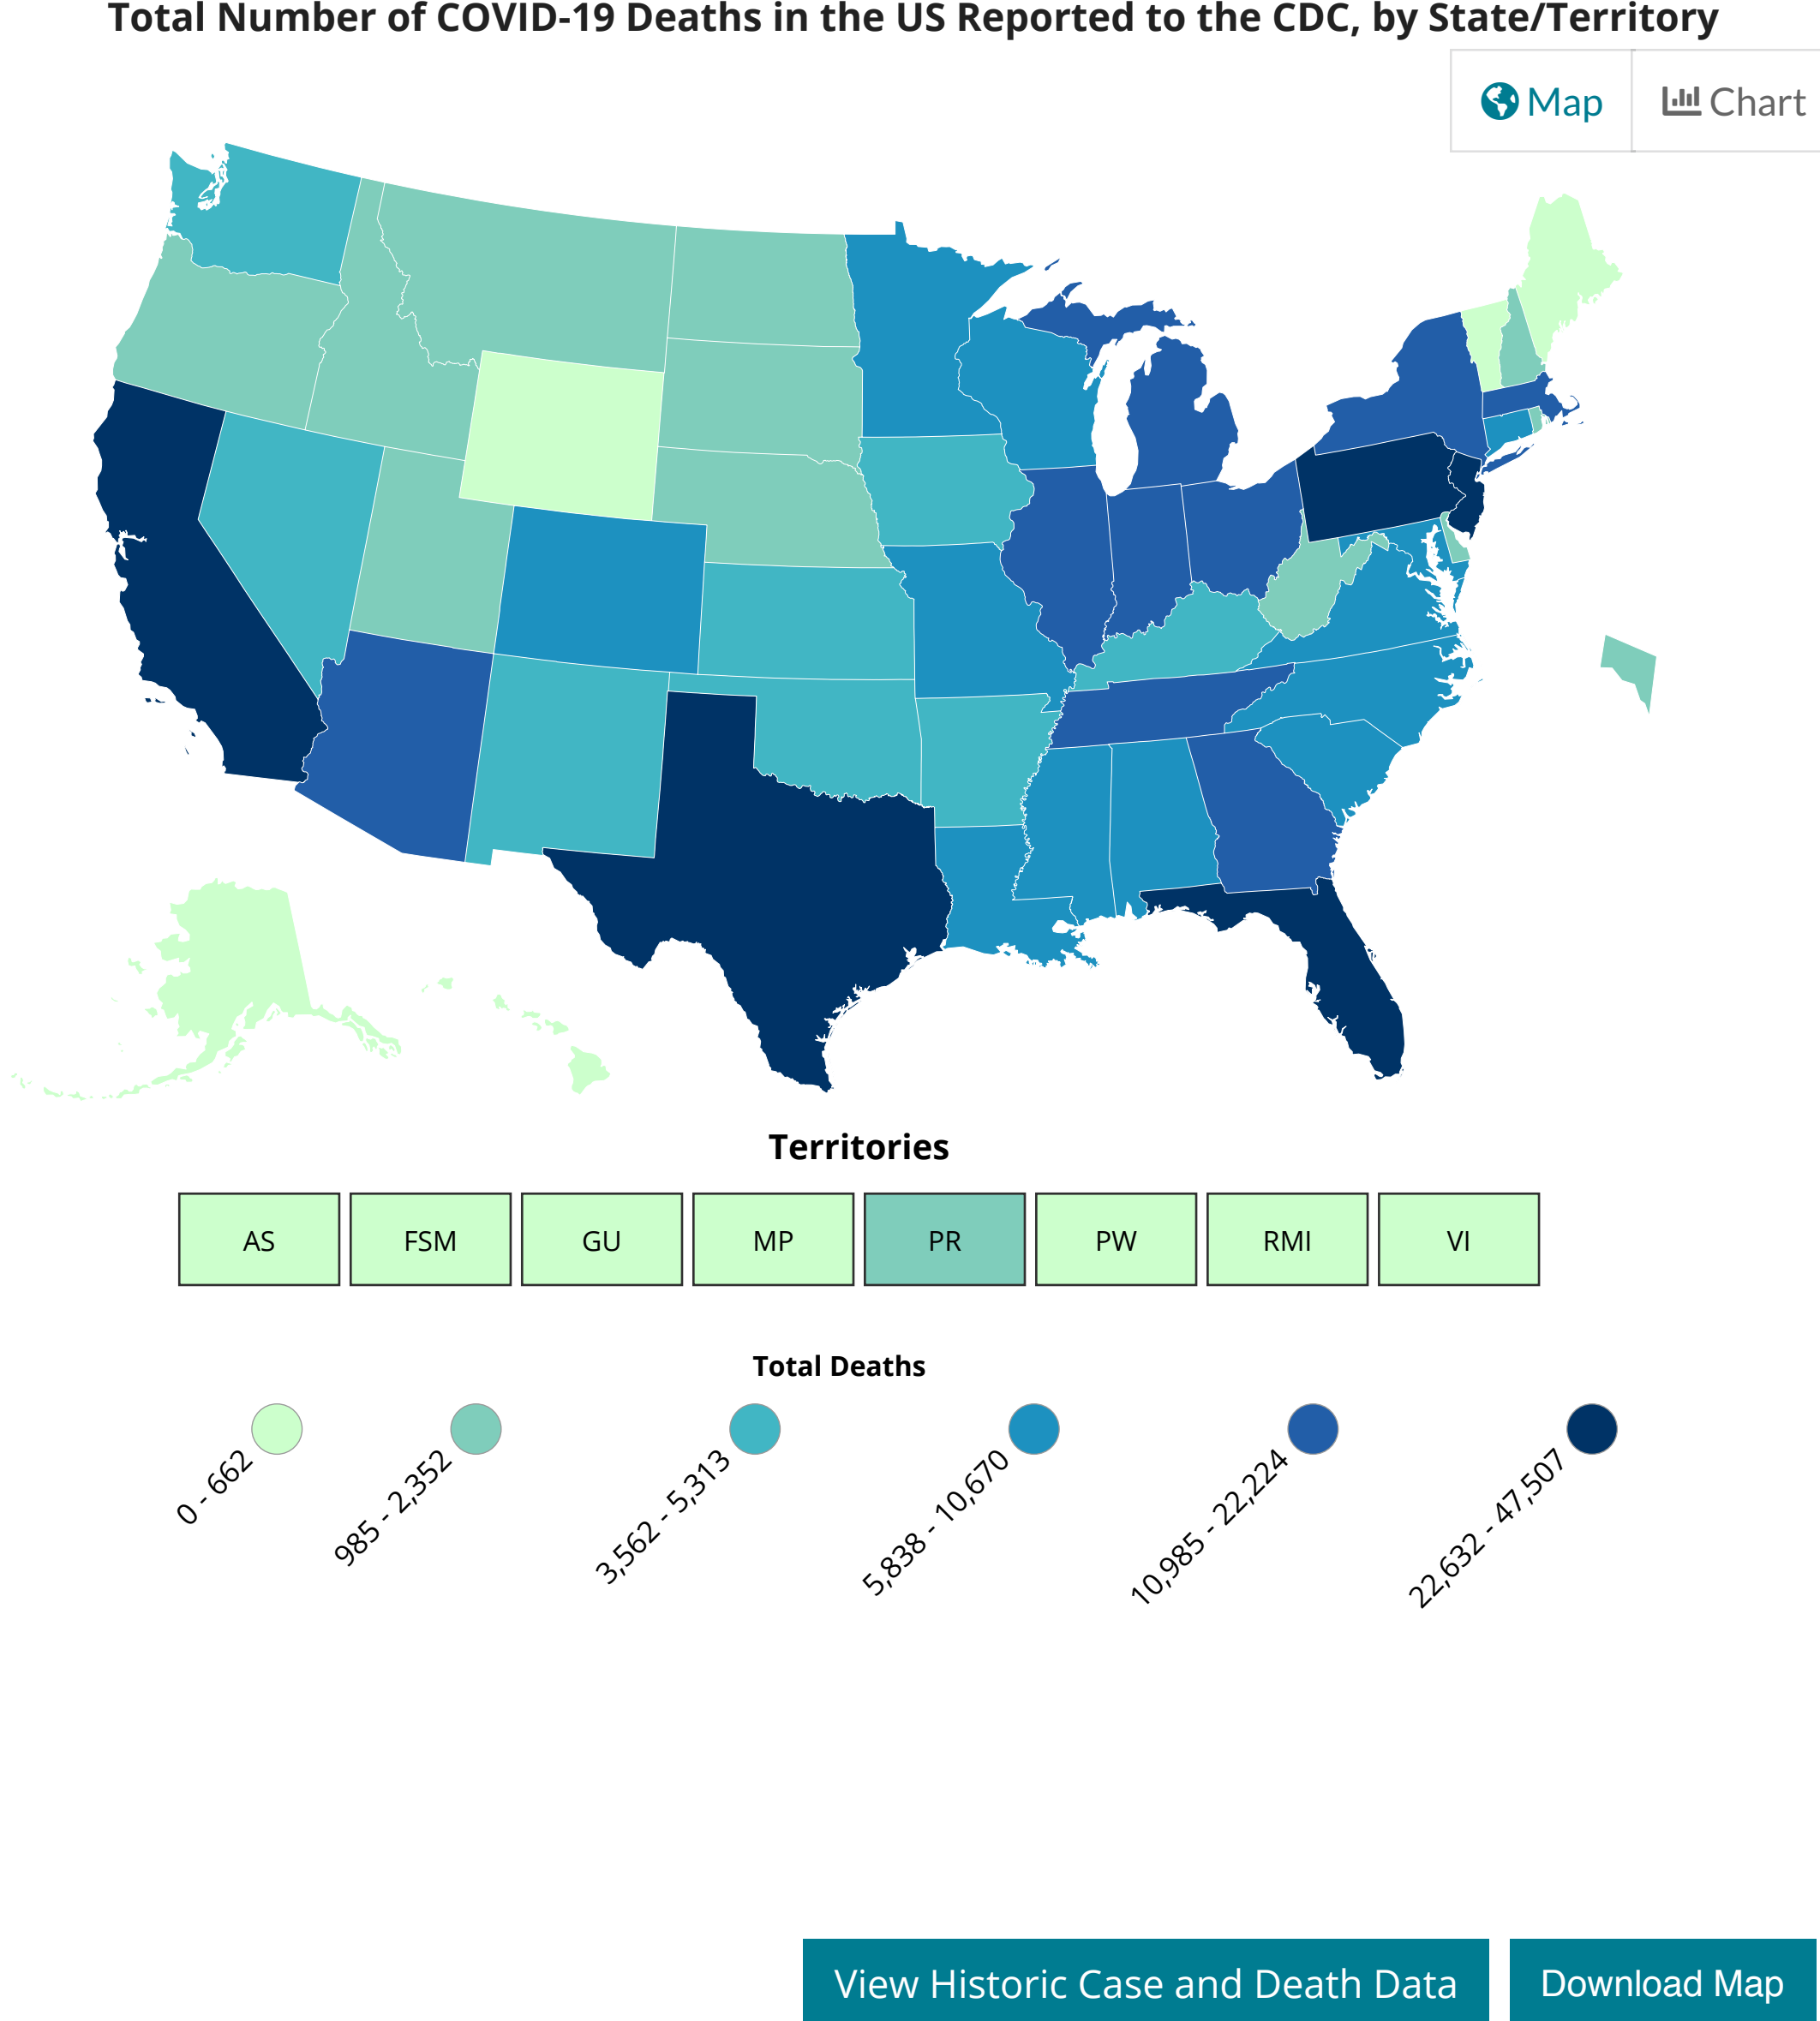

Maps, charts, and data provided by the CDC, updated daily by 8 pm ET<sup>†</sup>

TOTAL CASES <b>27,669,556</b> +69,165 New Cases	DEATHS IN LAST 7 DAYS <b>18,957</b>	TOTAL DEATHS <b>489,067</b> +2,601 New Deaths
---	--	---

CDC | Updated: Feb 18 2021 12:45PM

**View:**  Cases  Deaths  
**Time period:**  Last 7 Days  Since Jan 21, 2020  
**Metric:**  Count  Rate per 100,000

This shows the total number of deaths since the pandemic started.

Data Table for Total Deaths by State/Territory

CDC | Updated: Feb 18 2021 12:45PM [Download Data](#)

State/Territory	Total Deaths	Confirmed	Probable
California	47,507	N/A	N/A
Texas	40,717	N/A	N/A
Florida	29,311	N/A	N/A
New York City*	28,591	23,547	5,044
Pennsylvania	23,319	N/A	N/A
New Jersey	22,632	20,343	2,289
Illinois	22,224	20,057	2,167
New York*	17,500	N/A	N/A
Ohio	16,513	14,046	2,467
Georgia	16,273	14,254	2,019
Michigan	16,160	15,188	972
Massachusetts	15,520	15,312	208
Arizona	15,063	13,328	1,735
Indiana	12,250	11,825	425
Tennessee	10,985	8,834	2,151
North Carolina	10,670	9,482	1,188
Louisiana	9,391	8,740	651
Alabama	9,346	7,324	2,022
South Carolina	8,117	7,248	869
Missouri	7,695	N/A	N/A
Maryland	7,661	7,479	182
Connecticut	7,476	6,129	1,347
Virginia	7,090	6,096	994
Wisconsin	6,798	6,214	584
Mississippi	6,531	4,601	1,930
Minnesota	6,458	6,124	334
Colorado	5,838	5,114	724
Arkansas	5,313	N/A	N/A
Iowa	5,306	N/A	N/A
Nevada	4,774	N/A	N/A

[View and Download](#) COVID-19 Case Surveillance Public Use Data

<sup>†</sup>Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

On 4 February 2021, a state reported 1,507 new deaths. CDC is working with the state to assess the time period from which these data cover. This may temporarily impact death counts, rates and averages.

**Data Sources, References & Notes:** The case classifications for COVID-19, a nationally notifiable disease, are described in an [an updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of jurisdictions reported to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). The average daily rate per 100,000 people in the last 7 days is calculated as the 7-day moving average of new cases or deaths (current day + 6 preceding days divided by 7) per 100,000 people using the U.S. Census Bureau, 2019\* [American Community Survey 1-year estimates](#). The 7-day cumulative rate is calculated as (current day + 6 preceding days) per 100,000 people using the U.S. Census Bureau, 2019\* American Community Survey 1-year estimates. Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the U.S. Census Bureau, 2019\* American Community Survey 1-year estimates.

\*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. This raised the total number of new cases in both Texas and the U.S. during this time period and correspondingly affects the 7-day rolling average of new cases.
