United States COVID-19 Cases and Deaths by State

Maps, charts, and data provided by the CDC, updated daily by 8 pm ET†

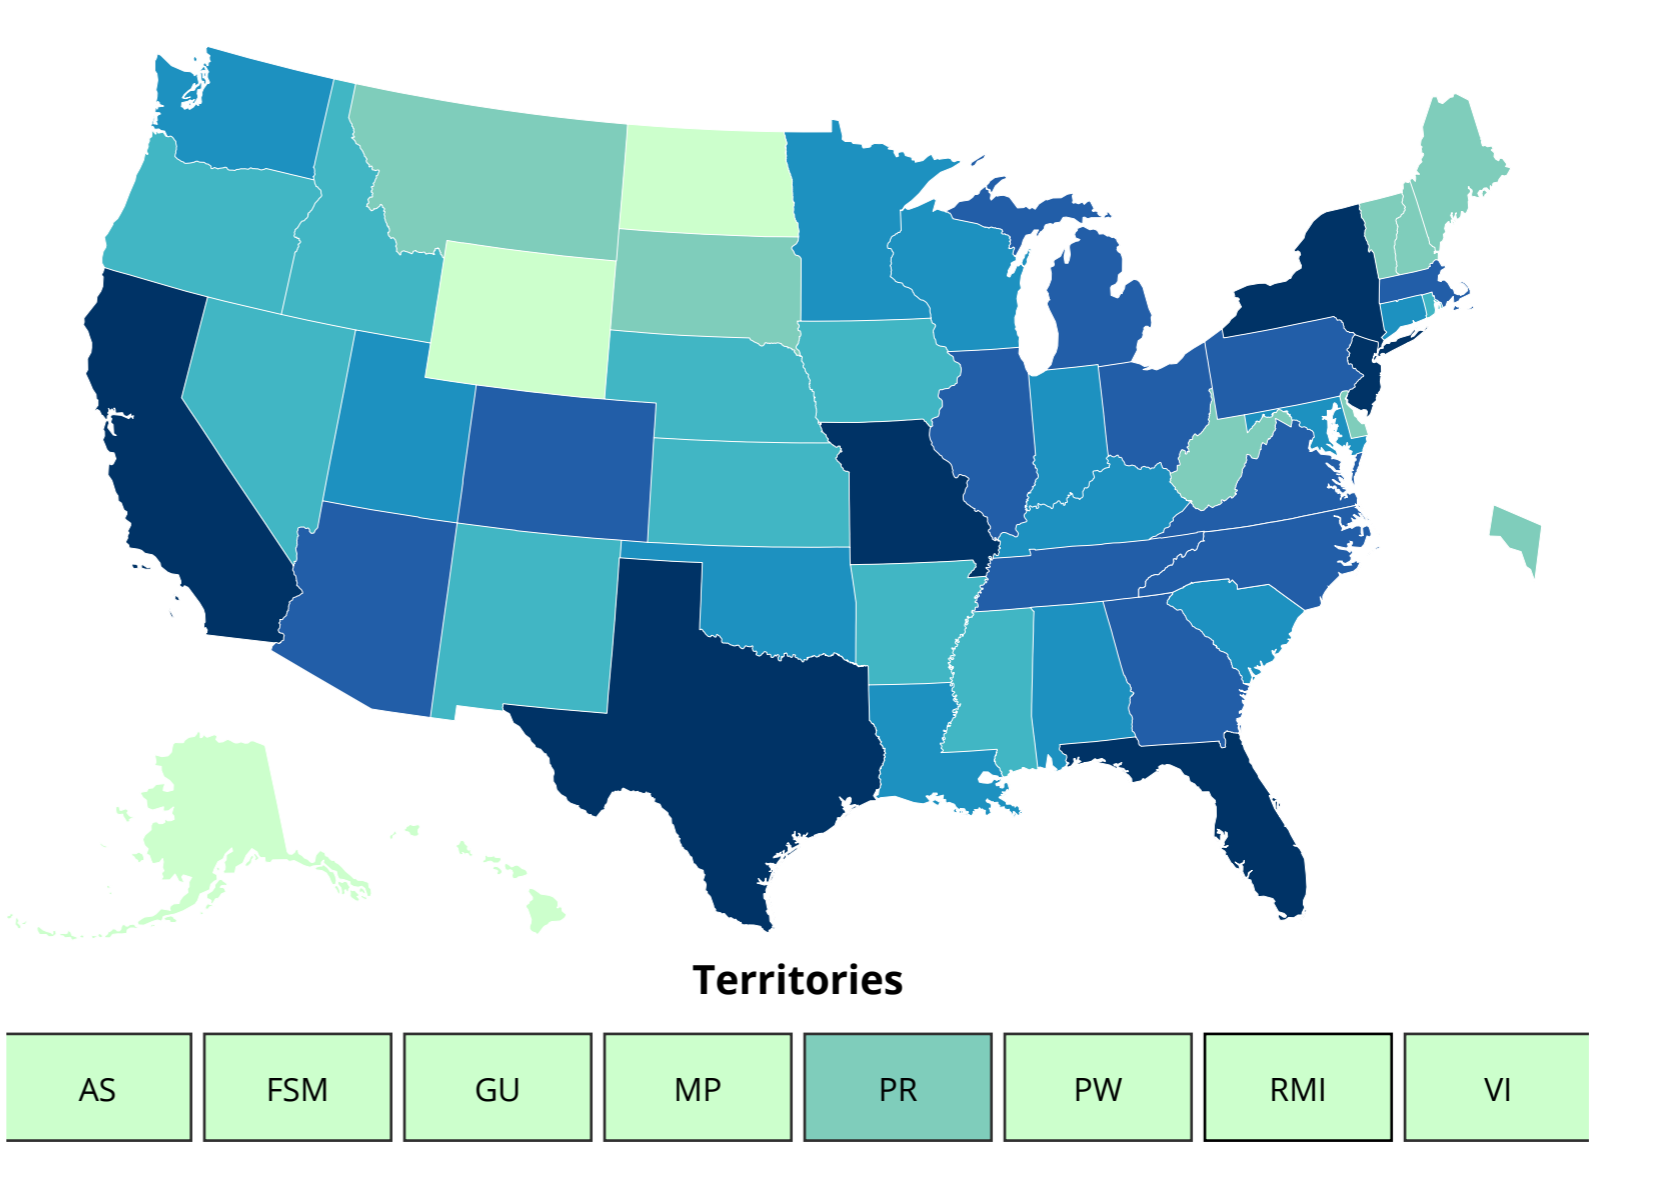

CDC | Updated: Mar 9 2021 12:27PM

View: Cases Deaths
Time period: Last 7 Days Since Jan 21, 2020
Metric: Count Rate per 100,000

This shows the total number of cases over the last 7 days to show the spread of COVID-19.

US COVID-19 Cases Reported to the CDC in the Last 7 Days, by State/Territory

Data Table for Cases in Last 7 Days by State/Territory

CDC | Updated: Mar 9 2021 12:27PM [Download Data](#)

State/Territory ↕	Cases in Last 7 Days ↕
Missouri	84,037
Texas	41,568
Florida	36,622
New York City*	26,032
California	25,574
New York*	23,152
New Jersey	22,420
Pennsylvania	16,891
Georgia	16,271
North Carolina	12,736
Illinois	11,678
Michigan	10,940
Ohio	10,851
Virginia	9,570
Arizona	9,416
Massachusetts	8,425
Tennessee	8,211
Colorado	7,348
South Carolina	6,616
Alabama	6,323
Kentucky	5,914
Indiana	5,523
Maryland	5,496
Minnesota	5,253
Washington	5,023
Connecticut	4,770
Wisconsin	4,142
Oklahoma	3,853
Louisiana	3,785
Utah	3,617
Iowa	3,132
Mississippi	2,713
Arkansas	2,442
Nevada	2,413
Rhode Island	2,393
Kansas	2,149
Nebraska	1,933
Idaho	1,847
New Mexico	1,743
Oregon	1,728
West Virginia	1,579
Delaware	1,483
New Hampshire	1,472
Puerto Rico	1,202
South Dakota	1,126
Maine	1,114
Montana	956
Vermont	915
District of Columbia	895
North Dakota	557
Alaska	547
Wyoming	432
Hawaii	325
Virgin Islands	98
Guam	10
Northern Mariana Islands	3
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

Wondering what all the data mean?
CDC's new [COVID Data Tracker Weekly Review](#) helps you stay up-to-date on the pandemic with weekly visualizations, analysis, and interpretations of key data and trends.

†Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

On 4 February 2021, a state reported 1,507 new deaths. CDC is working with the state to assess the time period from which these data cover. This may temporarily impact death counts, rates and averages.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists on August 5, 2020. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [CDC's COVID-19 FAQ webpage](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state level data, CDC calculates the number of new cases or deaths each day by calculating the difference in cumulative counts reported by the state from the day before. Historical data are not typically updated unless requested by the state. Therefore, the number of historical cases and deaths presented on CDC's website reflect the date the data was reported to CDC and not necessarily the date the case or death was recorded in the state.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). The 7-day cumulative rate is calculated as (current day + 6 preceding days) per 100,000 people using the [US Census Bureau Population Estimates Program](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the [US Census Bureau Population Estimates Program](#).

*2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. CDC COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

Provision of historical cases and deaths by jurisdictions can impact new case and death numbers and 7-day averages. On 18 December, Texas reported 171,505 historical counts of probable cases with dates between 1 November and 18 December. Additionally, historical cases were reported on: Feb 27, 2021 (TX - 2,990); Mar 1, 2021 (TX - 1,840); Mar 3, 2021 (TX - 1,641, AL - 2,114); and Mar 8, 2021 (MO - 81,806, TX - 1,295). Historical deaths were reported on: Feb 2020 (NJ - 1,824); Feb 4, 2021 (IN - 1,507); Feb 12, 2021 (OH - 2,559); Feb 13, 2021 (OH - 1,204); and Feb 25, 2021 (CA - 806). On 08 March 2021, Texas reported 1,295 and Missouri reported 81,806 historical counts of probable cases. This raised the total number of new cases in both Texas, Missouri, and the U.S. during on this day and correspondingly affects the 7-day rolling average of new cases. Without the inclusion of these probable cases in COVID Data Tracker for 08 March 2021, the resultant new cases in the United States on 08 March 2021 would be 41,237.
