^a Data for each postvaccine study period were averaged among unvaccinated children who were age-eligible for the vaccine: those 3–17 mo of age by July 1, 2007, and those 3–23 mo of age by July 1, 2008; July 1, 2009; and July 1, 2010. Rate reductions for diarrhea-associated hospitalizations among unvaccinated children are provided in Table 4 in the article.

^b Average annual hospitalization rate for 2001–2006 among children aged <2 y during the July–June study period.
