Total Cases with Known ECMO Status	8544	Geography
Percent with Known ECMO Status	10.2	
Total ICU Cases	379	
Total Ventilation Cases	87	
Total ECMO Cases	18	

There are currently 56 U.S.-affiliated jurisdictions reporting cases of COVID-19. This includes 50 states, District of Columbia, New York City, the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands. Because only about a third of jurisdictions include information on pregnancy status, these numbers likely do not include all pregnant women with COVID-19 in the United States and must be interpreted with caution. The completeness of this variable continues to improve each week as more jurisdictions report cases. Case numbers reported on other websites may differ from what is posted on CDC's website because overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reported cases in jurisdictions and CDC's website may occur because of the timing of reporting and website updates. The process of reporting and confirming cases displayed by other sites may differ. Case counts may fluctuate from week to week due to data cleaning processes.

As of October 2020, CDC will exclude reports of cases of COVID-19 among pregnant women who are younger than age 54 in the weekly reporting. Based on review of data quality, cases reported as pregnant with ages less than 54 are less likely to be true pregnancies, and more likely to be data errors. Cases with unknown age are still included in the reporting.

For more information on how CDC collects COVID-19 surveillance data, see [FAQ COVID-19 Data and Surveillance](#)

For surveillance data on birth and infant outcomes from the Surveillance for Emerging Threats to Mothers and Babies (SET-NET) see [COVID-19 during Pregnancy: Birth and Infant Outcomes](#)
