day of reporting. • Vaccination data on CDC's COVID Data Tracker are updated daily between 1:30 pm and 8:00 pm ET. • Updates will occur the following day when reporting coincides with a federal holiday.

Updates: On April 13, 2021, the total doses administered data posted to Tracker inadvertently included approximately 200,000 duplicate doses effecting Vermont, Georgia, Illinois, West Virginia, and Maine. The issue has since been resolved and totals for April 14, 2021 accurately reflect the total doses administered.

two doses on different days (regardless of time interval) of the two-dose mRNA series or received one dose of a single-dose vaccine. • CDC determined the number of people receiving at least one dose and the number of people who are fully

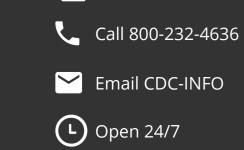

• For reporting on CDC COVID Data Tracker, CDC counts people as being "fully vaccinated" if they received

vaccinated based on information that state, territorial, tribal, and local public health agencies and federal entities reported to CDC on dose number, dose manufacturer, administration date, recipient ID, and date of submission. Because the method used to determine dose numbers needs to be applied across multiple jurisdictions (states, territories, tribes, or local entities) with different reporting practices, CDC's dose number estimates might differ from those reported by jurisdictions and federal entities. People receiving doses are attributed to the jurisdiction in which the person resides.

• When the vaccine manufacturer is not reported, the recipient is considered fully vaccinated with two doses.

CDC has capped the percent of population coverage metrics at 99.9%. These metrics could be greater than 99.9% for multiple reasons, including census denominator data not including all individuals that currently reside in the

• Since March 29, 2021, the total number of doses delivered, and total number of doses administered by dialysis centers participating in the Federal Dialysis Center Program are reflected in national totals and in jurisdictional totals.
