Data on COVID-19 during Pregnancy: Severity of Maternal Illness

Monitoring the impact of COVID-19 during pregnancy can protect pregnant women and their babies; maps, charts, and data provided by CDC

Looking for data on birth and infant outcomes among pregnant women with COVID-19?

Visit CDC's Birth and Infant Outcomes data page for information on delivery type, preterm birth, and infant test results.

Pregnant women¹ with COVID-19, United States, January 22, 2020 - April 19, 2021

TOTAL CASES¹

86,488

TOTAL DEATHS

97

Pregnant women with COVID-19 by age, United States, January 22, 2020 - April 19, 2021

Data were collected from 86,488 women, and age was available for 86,488 (100%) women.

Download Chart

Pregnant women with COVID-19 by race/ethnicity, United States, January 22, 2020 - April 19, 2021

Data were collected from 86,488 women, but race/ethnicity was only available for 74,069 (85.6%) women.

Download Chart

Pregnant Women with COVID-19 who were hospitalized, United States, January 22, 2020 - April 19, 2021

Data were collected from 86,488 women, but hospitalization data were only available for 69,244 (80.1%).

HOSPITALIZED CASES³

14,652

Pregnant women with COVID-19 admitted to the ICU, who required invasive ventilation, or who required ECMO, United States, January 22, 2020 - April 19, 2021

Data were collected from 86,488 women, but ICU admission data were only available for 11,902 (13.8%) women, invasive ventilation data were only available for 8,046 (9.3%) women, and ECMO data were only available for 8,677 (10%).

[View and Download](#) COVID-19 Case Surveillance Public Use Data with Geography

About the Data: This page is updated weekly. The cases reported are only confirmed cases with laboratory evidence of SARS-CoV-2 infection.

There are currently 56 U.S.-affiliated jurisdictions reporting cases of COVID-19. This includes 50 states, District of Columbia, Guam, New York City, the Northern Mariana Islands, Puerto Rico, and the U.S. Virgin Islands. Because only about a third of case report forms include information on pregnancy status, these numbers likely do not include all pregnant women with COVID-19 in the United States and must be interpreted with caution. The completeness of this variable continues to improve each week. Increases in the total number of cases of COVID-19 among pregnant women are largely due to the updating of pregnancy status among already reported cases. Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur because of the timing of reporting and website updates. The process used for finding and confirming cases displayed by other sites may differ. Case counts may fluctuate from week to week due to data quality and cleaning processes.

As of October 2020, CDC will exclude reports of cases of COVID-19 among pregnant women who are younger than age 9 and older than age 54 in the weekly reporting. Based on review of data quality, cases reported as pregnant with ages less than 9 or greater than 54 are less likely to be true pregnancies, and more likely to be data errors. Cases with unknown age are still included.

For more information on how CDC collects COVID-19 surveillance data, see [FAQ COVID-19 Data and Surveillance](#)

For surveillance data on birth and infant outcomes from the Surveillance for Emerging Threats to Mothers and Babies Network (SET-NET) see [COVID-19 during Pregnancy: Birth and Infant Outcomes](#)
