What's this?

United States COVID-19 Cases and Deaths by State

Maps, charts, and data provided by CDC, updated daily by 8 pm ET†

TOTAL CASES 32,481,455 +34,159 New Cases	7 DAY CASE RATE PER 100,000 84.6	TOTAL DEATHS 578,520 +579 New Deaths
--	---	--

CDC | Updated: May 9 2021 12:27PM

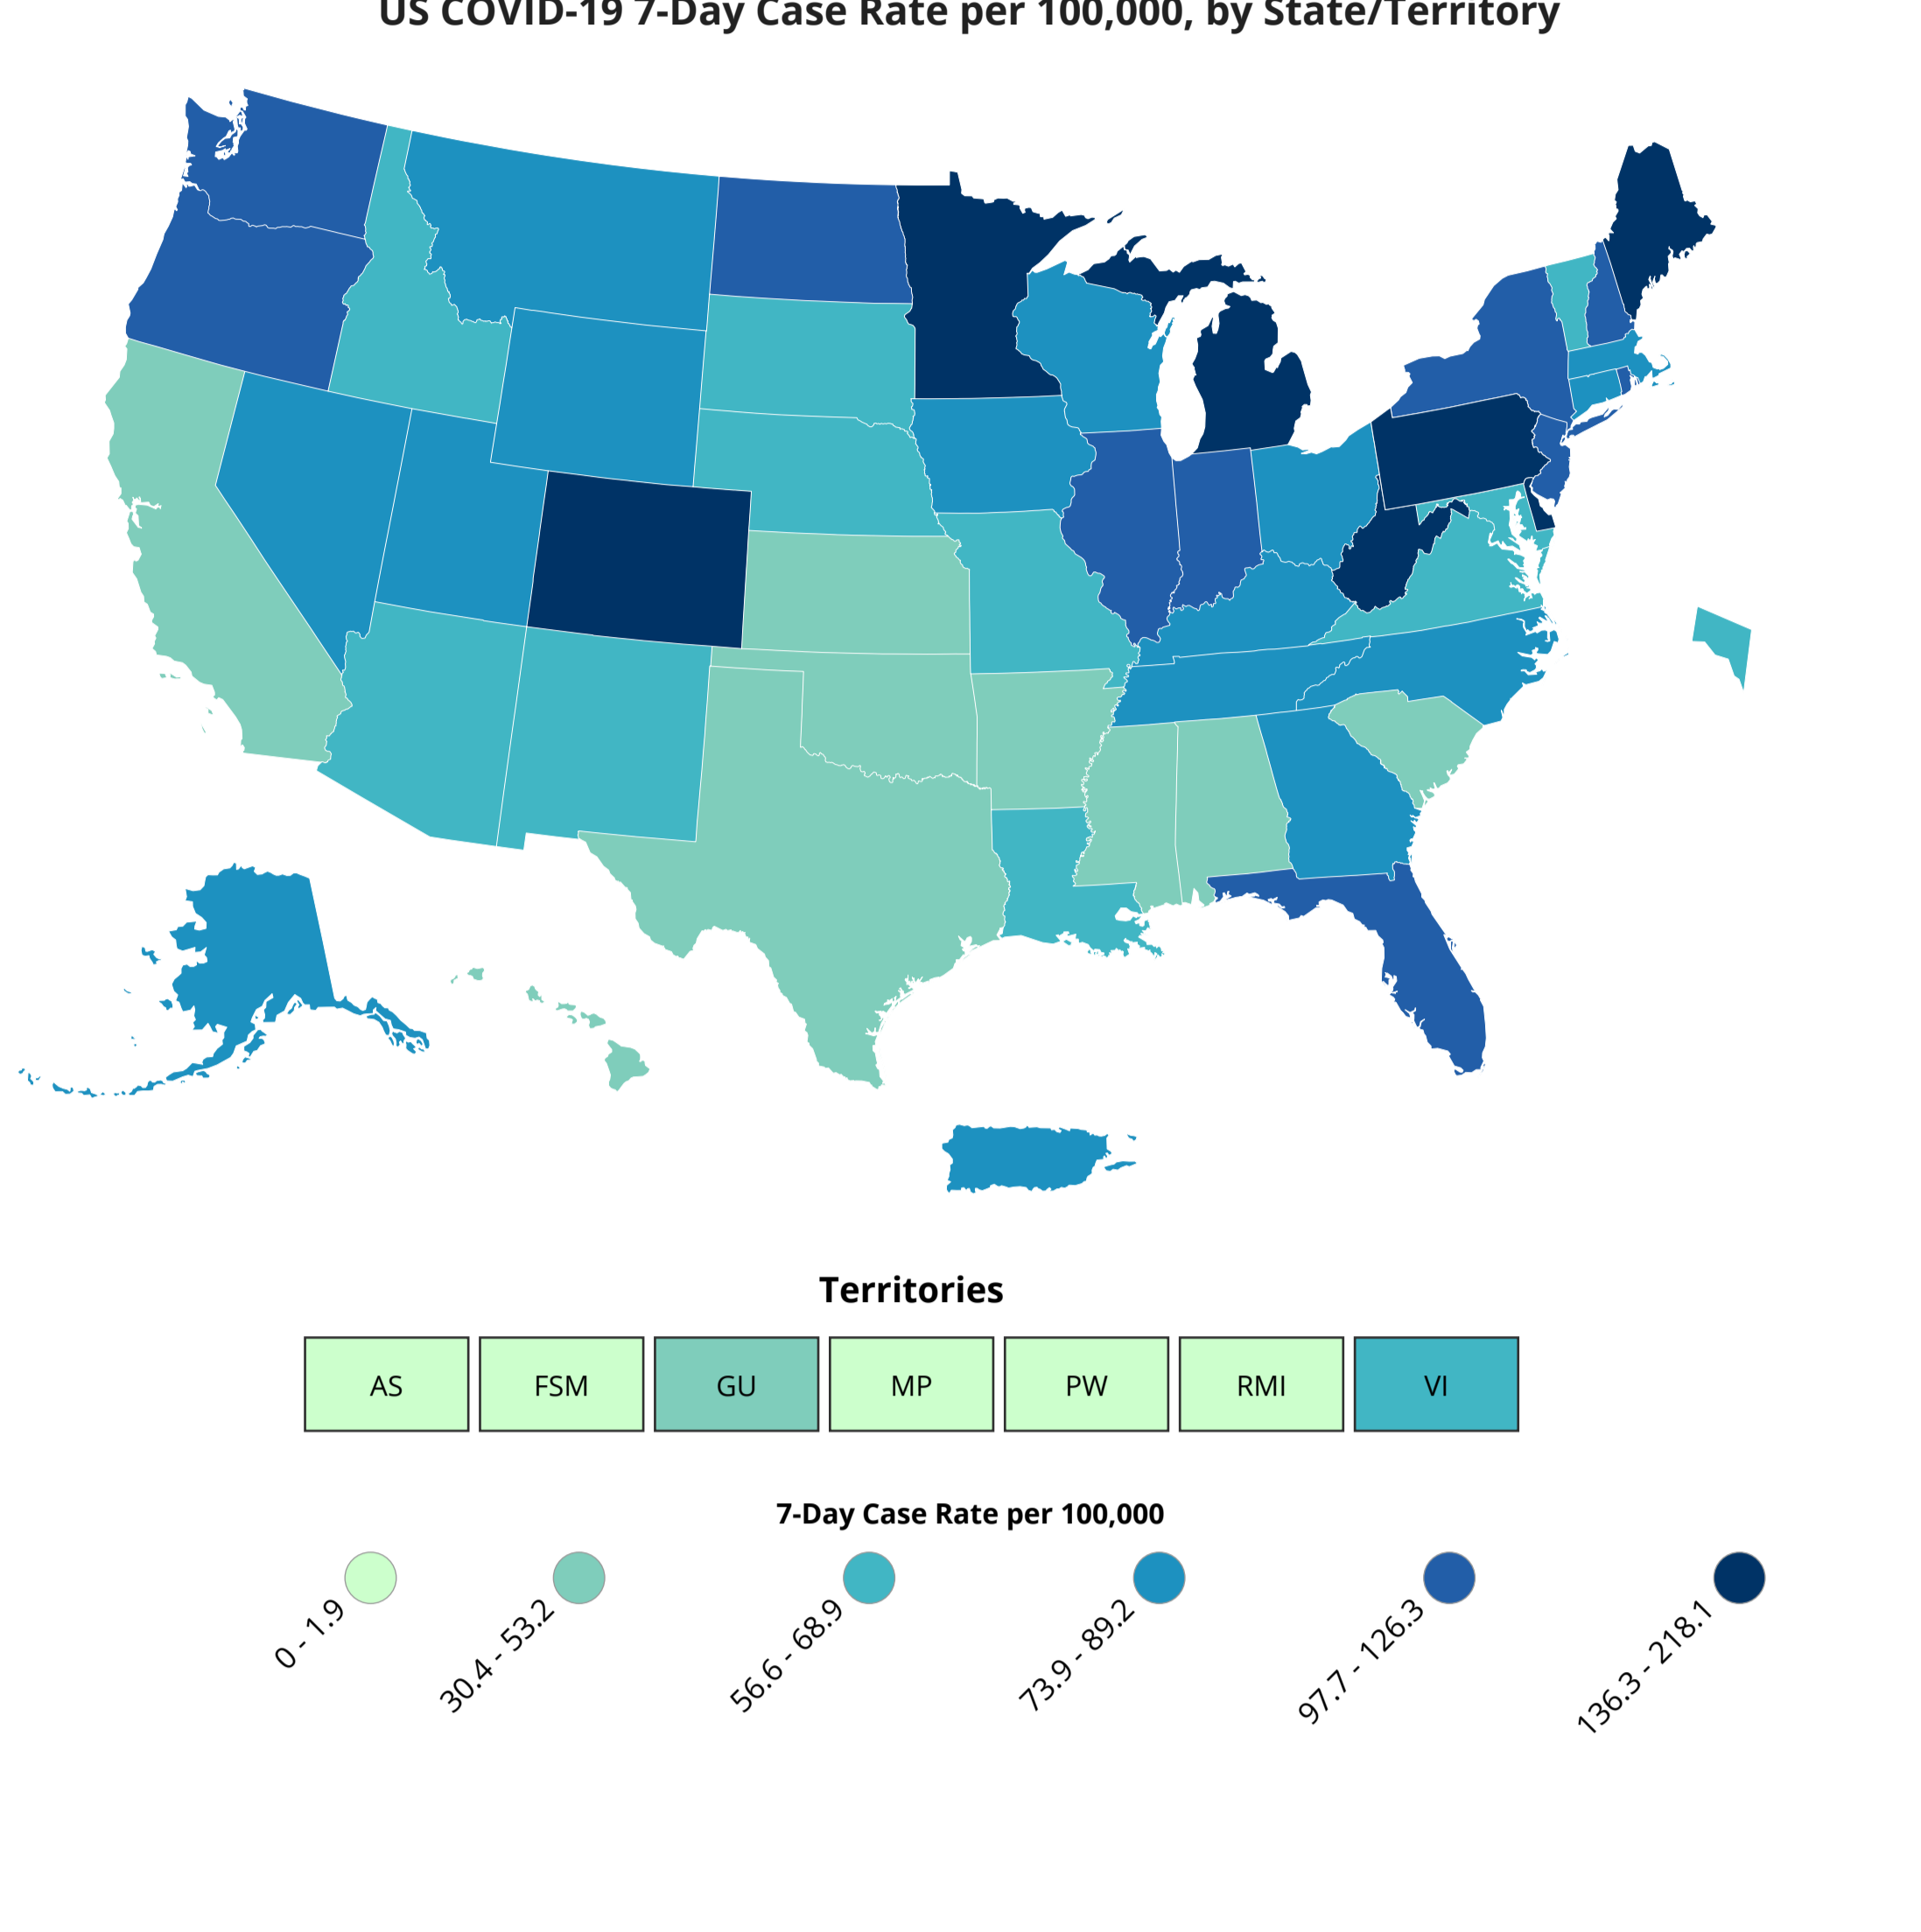

View: Level of Community Transmission Cases Deaths Tests Performed Percent Positive

Time period: Last 7 Days Since Jan 21, 2020

Metric: Count Rate per 100,000

This shows the number of COVID-19 cases for every 100,000 people over the last 7 days, allowing you to compare areas with different population sizes.

US COVID-19 7-Day Case Rate per 100,000, by State/Territory

Data Table for Cumulative Cases per 100k in Last 7 Days

CDC | Updated: May 9 2021 12:27PM

State/Territory ↕	7-Day Case Rate per 100,000 ↕
Michigan	218.1
Minnesota	167.3
Colorado	166.3
Maine	159.7
Pennsylvania	142
West Virginia	139.7
Delaware	136.3
Florida	126.3
Oregon	123.5
Washington	121.8
Illinois	121.2
Indiana	107.5
Rhode Island	105.6
North Dakota	101.6
New Hampshire	98.4
New Jersey	98.4
New York*	97.7
Kentucky	89.2
Connecticut	85.5
North Carolina	85.1
Alaska	85
Montana	84.6
Puerto Rico	84.3
Massachusetts	80.6
Wisconsin	79.6
Tennessee	78.2
Ohio	75.3
Wyoming	74.6
Utah	74.5
Georgia	73.9
Iowa	73.9
Nevada	73.9
New York City*	68.9
Virgin Islands	68.8
Maryland	68.4
New Mexico	66.2
Vermont	66.2
Arizona	66.1
Louisiana	63.2
Nebraska	63
Virginia	62.5
South Dakota	61.6
District of Columbia	58.9
Missouri	58.5
Idaho	56.6
Texas	53.2
Arkansas	48
Hawaii	44
Kansas	44
South Carolina	43.8
Oklahoma	34.7
Guam	32.6
California	31.6
Mississippi	31.4
Alabama	30.4
Northern Mariana Islands	1.9
American Samoa	0
Federated States of Micronesia	0
Palau	0
Republic of Marshall Islands	0

Wondering what all the data mean?
 CDC's new [COVID Data Tracker Weekly Review](#) helps you stay up-to-date on the pandemic with weekly visualizations, analysis, and interpretations of key data and trends.

† Data will update as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily updates might be delayed due to delays in reported data.

On 4 February 2021, a state reported 1,507 new deaths. CDC is working with the state to assess the time period from which these data cover. This may temporarily impact death counts, rates and averages.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated interim COVID-19 position statement and case definition](#) issued by the jurisdictions implement these case definitions on August 5, 2020. The 7-day cumulative rate is calculated as (current day + 6 preceding days) per 100,000 people using the [US Census Bureau Population Estimates Program](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the [US Census Bureau Population Estimates Program](#).

Total cases are based on aggregate counts of COVID-19 cases reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020, with the exception of persons repatriated to the United States from Wuhan, China, and Japan. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. In accordance with the CSTE definition of COVID-19 cases and deaths, counts for many jurisdictions include both confirmed and probable COVID-19 cases and deaths. *Counts for NYC and New York State are shown separately; data for New York State show total cases and deaths for the state excluding data for NYC. COVID-19 case and death data that are not available to CDC are denoted by N/A. For aggregate state-level data, CDC calculates the number of new cases or deaths each day either by using the information provided by states and territorial jurisdictions or by calculating the difference in cumulative counts reported by the state from the day before. CDC also is working closely with states and jurisdictions to incorporate their historical data (<https://www.cdc.gov/coronavirus/2019-ncov/covid-data/faq-surveillance.html>). The number of historical cases and deaths presented on HealthData.gov reflects the information provided by the states and jurisdictions. Thus, data may reflect either the date the case or death occurred or the date it was recorded in the state. Provision of historical cases and deaths by jurisdictions can influence new case and death numbers and 7-day averages once CDC incorporates these data and assigns the data to the appropriate dates.

The map can be modified to show cases and deaths per 100,000 people in the last 7 days, total new cases and deaths in the last 7 days, total cases and deaths since January 21, 2020, and rates for cases (cases/100,000 people) and deaths (deaths/100,000). The 7-day cumulative rate is calculated as (current day + 6 preceding days) per 100,000 people using the [US Census Bureau Population Estimates Program](#). Rates per 100,000 are calculated as the total cases or deaths per 100,000 people using the [US Census Bureau Population Estimates Program](#).

2018 population estimates are still used for American Samoa, Federated States of Micronesia, Guam, New York City, Northern Mariana Islands, Palau, Republic of Marshall Islands and United States Virgin Islands.

CDC's overall COVID-19 case and death numbers are validated through a confirmation process with each jurisdiction. COVID-19 case and death numbers reported on other websites may differ from what is posted on the CDC COVID Data Tracker due to the timing of reporting and COVID Data Tracker updates, which may differ by up to 24 hours. COVID-19 counts from previous dates may be continually revised as more records are received and processed. Not all jurisdictions report counts daily; some counts are reported in batches and may increase COVID-19 case and death counts at different intervals and appear as spikes. The process used for finding and confirming COVID-19 cases and deaths displayed by other sites may differ.

Testing Data: The data represent viral COVID-19 laboratory test (reverse transcription polymerase chain reaction) results from laboratories in the United States, including commercial and reference laboratories, public health laboratories, hospital laboratories, and other testing locations. The data represent laboratory test totals-not individual people-and exclude antibody and antigen tests. The data are provisional and subject to change. National total test counts reflect data from the previous day and may not match the sum of the data presented for all jurisdictions. Data reported for each state and territory may be delayed several days in order to mitigate discrepancies in daily test counts due to variation in jurisdiction reporting. The data may also not include results from all testing sites within a jurisdiction (e.g., point-of-care test sites) and therefore reflect the majority, but not all, COVID-19 tests in the United States. The data are reported to state and jurisdictional health departments in accordance with applicable state or local law and in accordance with the Coronavirus Aid, Relief, and Economic Security (CARES) Act (CARES Act Section 18115). The data for each state are sourced from either data submitted directly by the state health department via COVID-19 electronic laboratory reporting (CELR), or a combination of commercial, public health, and in-house hospital laboratories. CELR data are used for states that either submit line-level data or submit aggregate counts that do not include antigen or antibody tests. The data are available for public use on HealthData.gov (<https://healthdata.gov/>). On April 26, 2021, CDC moved to presenting the RT-PCR testing data with a blanket 7-day lag to better align with other CDC products.
