COVID-19 Vaccination Equity

Vaccination Equity | Maps, charts, and data provided by CDC, updates daily by 8 pm ET[†]

This site provides a county-level view of COVID-19 vaccination coverage and social vulnerability measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks. The footnotes describe each data source and the methods used for calculating the metrics. For the most complete and up-to-date data for any county or jurisdiction, visit the relevant health department website. Additional data and features are forthcoming.

Population Fully Vaccinated:

- Total Population
- Population ≥ 12 Years of Age
- Population ≥ 18 Years of Age
- Population ≥ 65 Years of Age

Footnotes

Timing:[†] : Data will be updated after review and verification, usually before 8:00 pm ET.

Note: Daily updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on the day of reporting.
- Vaccination data on CDC's COVID Data Tracker are updated daily between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when reporting coincides with a federal holiday.

Methodology:

CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has

excluded from county-level summary measures vaccination records missing county of residence.

CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

County Reporting Completeness: Represents the proportion of fully vaccinated people whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. States with lower percentages for valid county of residence should be interpreted with caution.

CDC generates these maps by categorizing CDC SVI scores and each vaccination coverage metric into four classes (low, low-to-moderate, moderate-to-high, and high). Vaccination metrics and SVI rank are then combined to visualize county-level vaccination coverage by social vulnerability.

CDC Social Vulnerability Index (SVI):

- Low social vulnerability: 0-0.25
- Low-to-moderate social vulnerability: 0.2501-0.50
- Moderate-to-high social vulnerability: 0.5001-0.75
- High social vulnerability: 0.7501-1.0

Vaccination coverage for the total population, population ≥ 12 years of age, and population ≥ 18 years of age:

Percent of population that is fully vaccinated:

- Low vaccination coverage: 0-29.9%
- Low-to-moderate vaccination coverage: 30%-39.9%
- Moderate-to-high vaccination coverage: 40%-49.9%
- High vaccination coverage: 50% or more

Vaccination coverage for the population ≥ 65 years of age:

Percent of population that is fully vaccinated:

- Low vaccination coverage: 0-29.9%
- Low-to-moderate vaccination coverage: 30%-49.9%
- Moderate-to-high vaccination coverage: 50%-69.9%
- High vaccination coverage: 70% or more

CDC has capped the percent of population vaccination coverage metrics at 99.9%. These metrics could be greater than 99.9% for multiple reasons, including census denominator data not including all individuals that currently reside in the county (e.g., part time residents) or potential data reporting errors.
