[What's this?](#)

*There is about a 2-4 week delay in the data for a jurisdiction to confirm a case of SARS-CoV pregnant woman and report it to CDC.

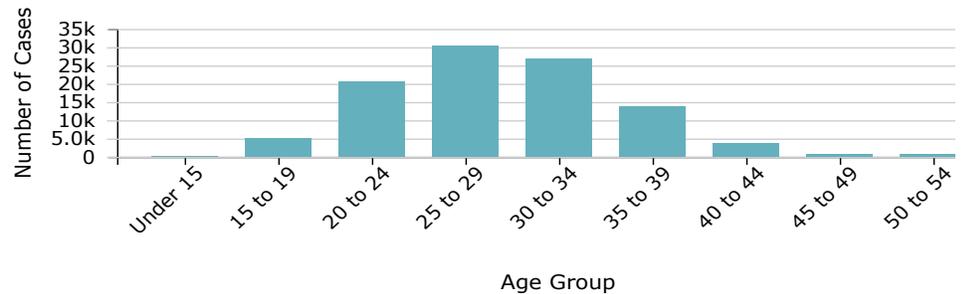

**Date of diagnosis is derived from the earliest date of either 1) when the case report was received by CDC from a jurisdictional health department or 2) the earliest available date relative to the illness or specimen collection.

Pregnant women with COVID-19 by age, United States, January 22, 2020 - July 19, 2021

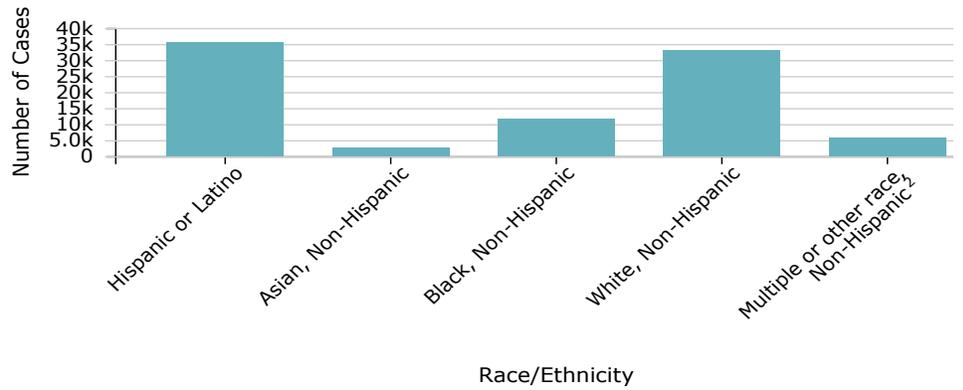

Data were collected from 101,710 women, and age was available for 101,710 (100%) women

[Download \(](#)

Pregnant women with COVID-19 by race/ethnicity, United States, January 22, 2020 - July 19, 2021

Data were collected from 101,710 women, but race/ethnicity was only available for 88,169 (women).

[Download](#)

Pregnant Women with COVID-19 who were hospitalized, United States, January 22, 2020 - July 19, 2021

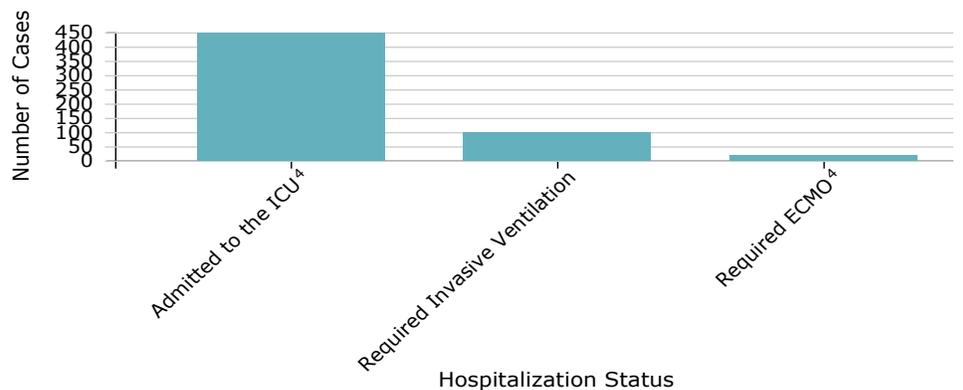

Data were collected from 101,710 women, but hospitalization data were only available for 8 (79.8%).

HOSPITALIZED CASES³

17,380

Pregnant women with COVID-19 admitted to the ICU, who required invasive ventilation, or who required ECMO, United States, January 22, 2020 - July 19, 2021

Data were collected from 101,710 women, but ICU admission data were only available for 1 (13.6%) women, invasive ventilation data were only available for 9,545 (9.4%) women, and ECMO data were only available for 10,130 (10%).

¹Cases with age <9 years and >54 years are excluded. Cases with unknown age are included.

²Other race includes non-Hispanic American Indian or Alaska Native or non-Hispanic Native Hawaiian or Other Pacific Islander

³Data were not available to distinguish hospitalization for COVID-19-related indications, such as worsening respiratory status, from hospital admission for pregnancy-related indications, such as delivery.

⁴Abbreviation: ICU, intensive care unit; ECMO, extracorporeal membrane oxygenation, an advanced life support technique used for patients with life-threatening heart and/or lung problems.

There are currently 56 U.S.-affiliated jurisdictions reporting cases of COVID-19 to CDC. This includes 50 states. Only about a third of case report forms include information on pregnancy status. Therefore, these numbers likely do not include all pregnant women with COVID-19 in the U.S. and must be interpreted with caution. The increase in COVID-19 among pregnant women are largely due to the upsurge of pregnancy status among already reported cases. Overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reported jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The week to week due to data quality and cleaning processes.

Since October 2020, CDC has excluded reports of cases of COVID-19 among pregnant women who are younger than age 9 and older than age 54 in the weekly reporting. Based on review of data quality, cases reported as pregnant with ages younger than 9 or older than 54 are less likely to be true pregnancies, and more likely to be data errors. Cases with unknown age are still included.

For more information on how CDC collects COVID-19 surveillance data, see [FAQ COVID-19 Data and Surveillance](#)
