Demographic Trends of COVID-19 cases and deaths in the US reported to CDC

Maps, charts, and data provided by CDC, updates Tues-Sun by 8 pm ET[†]

CDC is working with states to provide more information on race/ethnicity for reported cases. The percent of reported cases that include race/ethnicity data is increasing.

These data only represent the geographic areas that contributed data on race/ethnicity. Every geographic area has a different racial and ethnic composition. These data are not generalizable to the entire U.S. population.

If cases were distributed equally across racial and ethnic populations, one would expect to see more cases in those populations that are more highly represented in geographic areas that contributed data.

Percentages displayed in the charts below represent the percent of cases or deaths for which the demographic variable of interest is known.

CDC | Data as of: Wednesday, October 6, 2021 1:32 PM ET. Posted: Wednesday, October 6, 2021 3:49 PM ET

Footnotes

[†]Data will update Tuesday - Sunday as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily (Tues-Sun) updates might be delayed due to delays in reported data.

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an [updated COVID-19 position statement and case definition](#) issued by the Council of State and Territorial Epidemiologists. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at [FAQ: COVID-19 Data and Surveillance](#). Demographic data for COVID-19 cases and deaths is based on a subset of individuals where case-level data are reported by state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020. Demographic data have varying degrees of missing data and are not generalizable to the entire population of individuals with COVID-19. All displayed counts include confirmed COVID-19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for certain jurisdictions also include probable COVID-19 cases and deaths. The process used for finding and confirming COVID-19 cases displayed by other sites may differ. On May 29, 2021, data on deaths among those ages 0-4 years were adjusted after the identification of a data discrepancy, resulting in a new count of 144. Counts from surveillance data are provisional and subject to change. On July 22, 2021, COVID Data Tracker released an update to display cases by age group using new age groupings. There was an error in the calculation used to aggregate cases into these new age groups, which resulted in COVID Data Tracker displaying an incorrect percentage of cases among people ages 16-17 years old. This issue has been resolved and the proper percentage of cases among people 16-17 years old is now displayed. On August 12, 2021, data on deaths were adjusted after the identification of a data discrepancy. This resulted in updated counts across several age groups.
