Data will update Tuesday - Sunday as soon as they are reviewed and verified, oftentimes before 8 pm ET. However, daily (Tues-Sun) updates might be

state and territorial jurisdictions to the Centers for Disease Control and Prevention (CDC) since January 21, 2020. Demographic data have varying

19 cases and deaths as reported by U.S. states, U.S. territories, New York City (NYC), and the District of Columbia from the previous day. Counts for

new count of 144. Counts from surveillance data are provisional and subject to change. On July 22, 2021, COVID Data Tracker released an update to

display cases by age group using new age groupings. There was an error in the calculation used to aggregate cases into these new age groups, which

resulted in COVID Data Tracker displaying an incorrect percentage of cases among people ages 16-17 years old. This issue has been resolved and the

proper percentage of cases among people 16-17 years old is now displayed. On August 12, 2021, data on deaths were adjusted after the identification

degrees of missing data and are not generalizable to the entire population of individuals with COVID-19. All displayed counts include confirmed COVID-

certain jurisdictions also include probable COVID-19 cases and deaths. The process used for finding and confirming COVID-19 cases displayed by other

sites may differ. On May 29, 2021, data on deaths among those ages 0-4 years were adjusted after the identification of a data discrepancy, resulting in a

Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an updated COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists . However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found at FAQ: COVID-19 Data and Surveillance. Demographic data for COVID-19 cases and deaths is based on a subset of individuals where case-level data are reported by

of a data discrepancy. This resulted in updated counts across several age groups.
