**Q: Can the current adult/adolescent formulation (purple cap) be used to vaccinate children 5 to <12 years old once the vaccine is authorized for this age group?**

**A: No.** For children under 12 years of age, you cannot use the current formulation and will need to use the future pediatric (orange cap) formulation.

**Purple Cap** – Adult/Adolescent: Authorized only for ages 12 years and older

**Orange Cap** – Pediatric: Future authorization for ages 5 to <12 years. A separate vaccine formulation specific for a 10mcg dose will be introduced.

**NOTE:** Use of the current adult/adolescent formulation (purple cap) to prepare doses for children 5 to <12 years would result in an injection volume for the 10mcg dose of 0.1mL, which is both generally considered too small for typical IM injections and has not been studied.

\*Diluent: 0.9% sterile Sodium Chloride Injection, USP (non-bacteriostatic; DO NOT USE OTHER DILUENTS)

\*\*The vaccine is currently under emergency use authorization review by the Food and Drug Administration (FDA) for children 5 to <12 years old
