[What's this?](#)

*There is about a 2-4 week delay in the data for a jurisdiction to confirm a case of SARS-CoV-2 and report it to CDC.

**Date of diagnosis is derived from the earliest date of either 1) when the case report was received from a jurisdictional health department or 2) the earliest available date related to the illness collection.

More information on this dataset: [COVID-19 Case Surveillance Public Use Data](#)

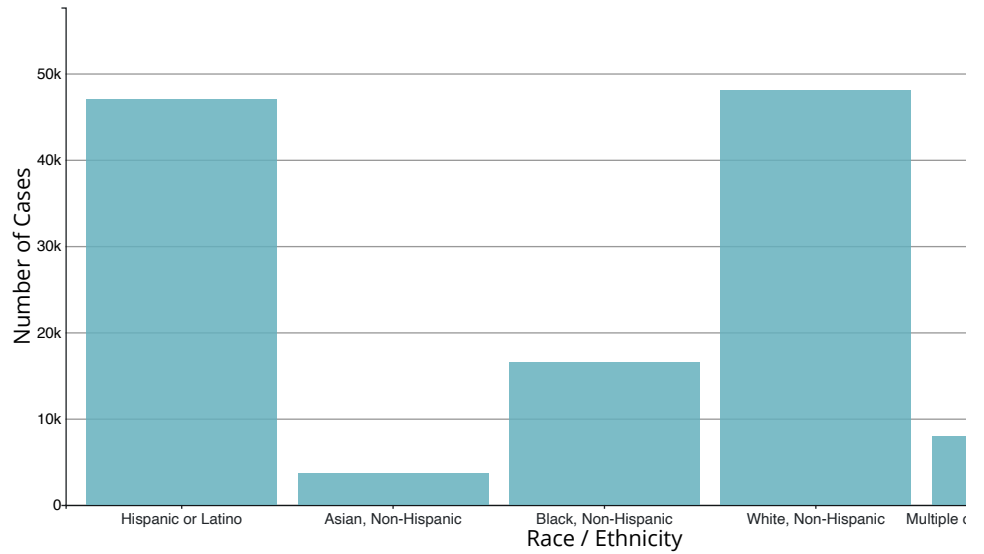

Pregnant women with COVID-19 by age, United States, Jan 2020 - November 1, 2021

Data were collected from 141,499 women, and age was available for 141,499 (100%)

Pregnant women with COVID-19 by race/ethnicity, United States, January 22, 2020 - November 1, 2021

Data were collected from 141,499 women, but race/ethnicity was only available for 123,237

Pregnant Women with COVID-19 who were hospitalized, United States, January 22, 2020 - November 1, 2021

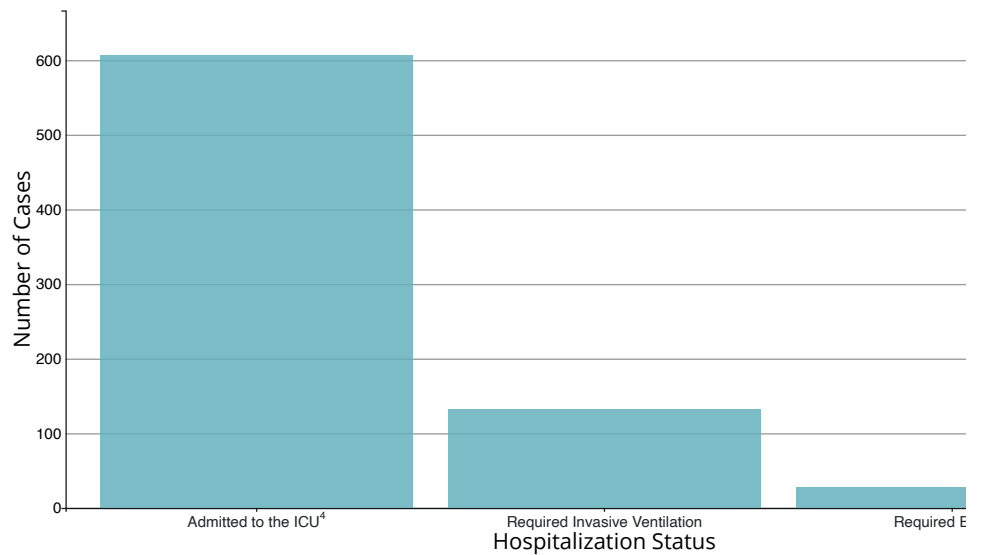

Data were collected from 141,499 women, but hospitalization data were only available for 1

HOSPITALIZED CASES³

24,388

Pregnant women with COVID-19 admitted to the ICU, who invasive ventilation, or who required ECMO, United States, 22, 2020 - November 1, 2021

Data were collected from 141,499 women, but ICU admission data were only available for 1 women, invasive ventilation data were only available for 12,144 (8.6%) women, and ECMO c available for 12,571 (8.9%).

¹Cases with age <9 years and >54 years are excluded. Cases with unknown age are included.

²Other race includes non-Hispanic American Indian or Alaska Native or non-Hispanic Native Hawaiian or Other Pacific Islander

³Data were not available to distinguish hospitalization for COVID-19-related indications, such as worsening respiratory status, for pregnancy-related indications, such as delivery.

⁴Abbreviation: ICU, intensive care unit; ECMO, extracorporeal membrane oxygenation, an advanced life support technique used for threatening heart and/or lung problems.

There are currently 56 U.S.-affiliated jurisdictions reporting cases of COVID-19 to CDC. This includes 50 states, DC, and Puerto Rico. CDC's weekly COVID-19 surveillance data are based on reports from these jurisdictions. CDC's report forms include information on pregnancy status. Therefore, these numbers likely do not include all pregnant women with COVID-19 in the U.S. and must be interpreted with caution. The completeness of the pregnancy variable continues to improve each week. Increases in the total number of cases of COVID-19 among pregnant women are largely due to the increase in pregnancy status among already reported cases. Case numbers reported on other websites may differ from what is reported on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases reported by other sites may differ. Case counts may fluctuate week due to data quality and cleaning processes.

Since October 2020, CDC has excluded reports of cases of COVID-19 among pregnant women who are younger than age 18 or older than age 54 in the weekly reporting. Based on review of data quality, cases reported as pregnant with age younger than 18 or older than 54 are less likely to be true pregnancies, and more likely to be data errors. Cases with unknown age are included.

For more information on how CDC collects COVID-19 surveillance data, see [FAQ: COVID-19 Data and Surveillance](#).

For surveillance data on birth and infant outcomes from the Surveillance for Emerging Threats to Mothers and Infants (SET-NET) see [COVID-19 during Pregnancy: Birth and Infant Outcomes](#).

Looking for data on birth and infant outcomes among pregnant women with COVID-19?

Visit CDC's Birth and Infant Outcomes data page for information on delivery type, preterm birth, and infant test results.

Want to learn more about COVID-19 risk for pregnant women and those who are breastfeeding?
