

AFM Cases and Outbreaks

As of December 3, 2021, there have been 22 confirmed cases in 2021 out of 48 reports of patients under investigation (PUIs). In 2020, there were 32 confirmed cases out of 59 reports of PUIs.

There have been 672 confirmed cases since CDC began tracking AFM in August of 2014. CDC has been thoroughly investigating cases since that time. We have seen increases in AFM cases, mostly in young children, in 2014, 2016 and 2018.

Annual AFM Cases by State

Annual maps represent only cases for whom information was sent to and confirmed by CDC as of December 3, 2021. Patients under investigation are still being classified, and the case counts are subject to change. Cases of AFM have occurred in 50 states and the District of Columbia.

2021

AFM Reported Cases-2021

In 2021, there have been 22 total confirmed cases in 12 states.

2020

AFM Reported Cases-2020

In 2020, there were 32 confirmed cases in 16 states and the District of Columbia.

2019

AFM Reported Cases-2019

In 2019, there were 47 total confirmed cases in 18 states.

2018

AFM Reported Cases-2018

In 2018, there were 238 total confirmed cases in 42 states. One of the confirmed cases is a foreign resident (based on the country of usual residence) and therefore not included in the state map.

2017

AFM Reported Cases-2017

In 2017, there were 38 total confirmed cases in 17 states.

2016

AFM Reported Cases-2016

In 2016, there were 153 total confirmed cases in 39 states and the District of Columbia.

2015

AFM Reported Cases-2015

In 2015, there were 22 total confirmed cases in 17 states.

2014

AFM Reported Cases-2014

In 2014, there were 120 total confirmed cases in 34 states between the months of August and December. These case counts include only pediatric patients younger than 22 years of age.

We defer to the states to release additional information on cases as they choose.

Cases by Month, 2014-2021

Most patients developed AFM between August and November, with increases in AFM cases in 2014, 2016, and 2018. Many viruses commonly circulate at this same time of year, including enteroviruses, which are likely responsible for the increase in cases in peak years.

Confirmed AFM cases by CDC

Data table

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Total
2014	—	—	—	—	—	—	—	21	51	24	15	9	120
2015	2	2	1	0	1	0	2	3	1	4	2	4	22
2016	1	0	6	1	7	9	13	33	43	27	9	4	153
2017	2	5	5	4	2	4	3	1	4	0	3	5	38
2018	0	4	1	2	3	8	8	30	88	66	21	7	238
2019	2	4	4	3	5	2	5	4	6	7	2	3	47
2020	7	3	5	2	1	2	3	3	3	2	0	1	32
2021	3	2	3	1	5	3	2	2	1				22

Confirmed cases of AFM by month of illness onset. Case Counts are subject to change.

[^] Confirmed AFM cases by CDC from August 2014 through December 3, 2021. Case counts are subject to change.

* The data shown from August 2014 to July 2015 are based on the AFM investigation case definition: onset of acute limb weakness on or after August 1, 2014, and a magnetic resonance image (MRI) showing a spinal cord lesion largely restricted to gray matter in a patient age ≤ 21 years.

† The data shown from August 2015 to present are based on the AFM case definition adopted by the Council of State and Territorial Epidemiologists (CSTE): acute onset of focal or flaccid limb weakness and an MRI showing spinal cord lesion largely restricted to gray matter and spanning one or more spinal segments, regardless of age.
