Maps, charts, and data provided by CDC, updates Tues-Sun by 8 pm ET<sup>T</sup> CDC is working with states to provide more information on race/ethnicity for reported cases. The percent of reported cases that include race/ethnicity data is increasing.

Demographic Trends of COVID-19 cases and deaths in the US reported to

These data only represent the geographic areas that contributed data on race/ethnicity. Every geographic area has a

different racial and ethnic composition. These data are not generalizable to the entire U.S. population.

If cases were distributed equally across racial and ethnic populations, one would expect to see more cases in those populations that are more highly represented in geographic areas that contributed data. Percentages displayed in the charts below represent the percent of cases or deaths for which the demographic

variable of interest is known. CDC | Data as of: Wednesday, March 30, 2022 1:48 PM ET. Posted: Wednesday, March 30, 2022 3:44 PM ET

- might be delayed due to delays in reported data. Data Sources, References & Notes: The case classifications for COVID-19, a nationally notifiable disease, are described in an updated COVID-19 position statement and case definition issued by the Council of State and Territorial Epidemiologists. However, there is some variation in how jurisdictions implement these case classifications. More information on how CDC collects COVID-19 case surveillance data can be found
- On August 12, 2021, data on deaths were adjusted after the identification of a data discrepancy. This resulted in updated counts across several age groups. March 14, 2022: An adjustment was made to COVID Data Tracker's mortality data involving the removal of 72,277 deaths previously reported across 26 states. An error in CDC's algorithm led to misclassifying deaths that were not COVID-19 related. The algorithm has since been

On July 22, 2021, COVID Data Tracker released an update to display cases by age group using new age groupings.
