CDC recommends use of COVID-19 Community Levels to determine the impact of COVID-19 on communities and take action. Community Transmission levels are provided for healthcare facility use only.

At this time, booster dose metrics refer to people who have received a **first booster dose**. CDC is updating its booster dose metrics on COVID-19 Data Tracker to accommodate updated booster dose recommendations.

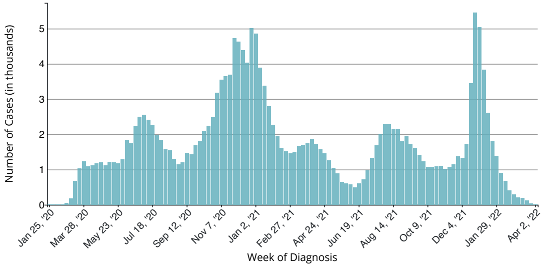
Visit CDC's Birth and Infant Outcomes data page for information on delivery type, preterm birth, and infant test results.

Pregnant Women[1] with COVID-19, United States, January 22, 2020 - April 4, 2022

TOTAL CASES[1]	TOTAL DEATHS
196,638	282

Cases of COVID-19 among Pregnant Women by Week of Diagnosis*

Data were collected from 196,638 women and date of diagnosis** was available for 196,638 (100%) women.



Download Chart

*Jurisdictions may take 2-4 weeks to confirm a case of SARS-CoV-2 in a pregnant woman and report it to CDC.

**Date of diagnosis is derived from the earliest date of either 1) when the case report was received by CDC from a jurisdictional health department or 2) the earliest available date related to the illness or specimen collection.

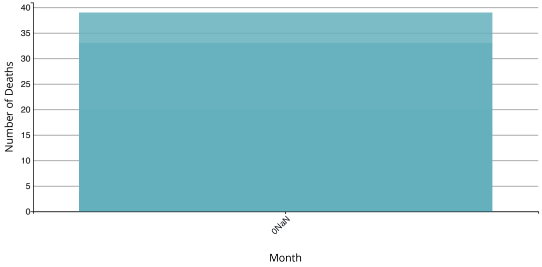
Deaths* among Pregnant Women with COVID-19 by Month**



Download Chart

*Deaths reported by jurisdictional health departments reflect the most up-to-date information received by CDC based on preliminary reporting using the case report. Date of death is used for reporting, and if missing, then date of diagnosis is used. Delays may exist in reporting of deaths from initial confirmation of SARS-CoV-2 infection.

** In July 2021, the Delta variant of SARS-CoV-2 became the predominant variant in the United States.

Pregnant Women with COVID-19 Who Were Hospitalized, United States, January 22, 2020 - April 4, 2022

Data were collected from 196,638 women, but hospitalization data were only available for 158,942 (80.8%).

HOSPITALIZED CASES[2]

31,581

Pregnant Women with COVID-19 Admitted to the ICU, Who Required Invasive Ventilation, or Who Required ECMO, United States, January 22, 2020 - April 4, 2022

Data were collected from 196,638 women, but ICU admission data were only available for 18,715 (9.5%) women, invasive ventilation data were only available for 13,624 (6.9%) women, and ECMO data were only available for 12,726 (6.5%).

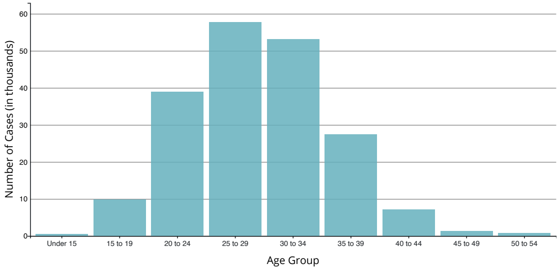
Pregnant Women with COVID-19 by Age, United States, January 22, 2020 - April 4, 2022

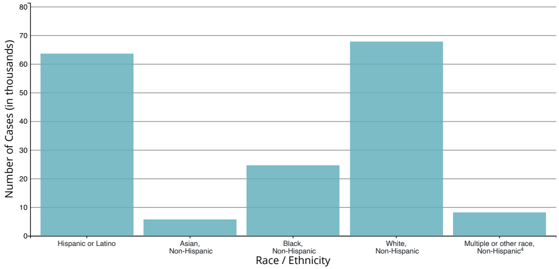
Data were collected from 196,638 women, and age was available for 196,638 (100%) women.



Download Chart

Pregnant Women with COVID-19 by Race/Ethnicity, United States, January 22, 2020 - April 4, 2022

Data were collected from 196,638 women, but race/ethnicity was only available for 169,626 (86.3%) women.



Download Chart

[1] Cases with age <9 years and >54 years are excluded. Cases with unknown age are included.

[2] Data were not available to distinguish hospitalization for COVID-19-related indications, such as worsening respiratory status, from hospital admission for pregnancy-related indications, such as delivery.

[3] Abbreviation: ICU, intensive care unit; ECMO, extracorporeal membrane oxygenation, an advanced life support technique used for patients with life-threatening heart and/or lung problems.

[4] Other race includes non-Hispanic American Indian or Alaska Native or non-Hispanic Native Hawaiian or Other Pacific Islander.

Footnotes

This webpage is updated weekly. The cases reported include only confirmed cases with laboratory evidence of SARS-CoV-2 infection.

About the Data:

All data on this page come from the Human Infection with 2019 Novel Coronavirus Case Report Form. There are currently 56 U.S.-affiliated jurisdictions reporting cases of COVID-19 to CDC. This includes 50 states, District of Columbia, Guam, New York City, the Northern Mariana Islands, Puerto Rico, and the U.S Virgin Islands. Only about a third of case report forms include information on pregnancy status. Therefore, these numbers likely do not include all pregnant women with COVID-19 in the U.S. and must be interpreted with caution. The completeness of the pregnancy variable continues to improve each week. Increases in the total number of cases of COVID-19 among pregnant women are largely due to the updating of pregnancy status among already reported cases. Case numbers reported on other websites may differ from what is posted on CDC's website because CDC's overall case numbers are validated through a confirmation process with each jurisdiction. Differences between reporting jurisdictions and CDC's website may occur due to the timing of reporting and website updates. The process used for finding and confirming cases reported by other sites may differ. Case counts may fluctuate from week to week due to data quality and cleaning processes.

Since October 2020, CDC has excluded reports of cases of COVID-19 among pregnant women who are younger than age 9 and older than age 54 in the weekly reporting. Based on review of data quality, cases reported as pregnant with ages younger than 9 or older than 54 are less likely to be true pregnancies, and more likely to be data errors. Cases with unknown age are still included.

For more information on how CDC collects COVID-19 surveillance data, see FAQ: COVID-19 Data and Surveillance

For information on the multiple efforts CDC is supporting to understand the impact of COVID-19 on pregnant women and infants, see Investigating the Impact of COVID-19 during Pregnancy.

For surveillance data on birth and infant outcomes from the Surveillance for Emerging Threats to Mothers and Babies Network (SET-NET) see COVID-19 during Pregnancy: Birth and Infant Outcomes.
