Footnotes

Updates will occur Monday through Friday as soon as they are reviewed and verified, oftentimes before 8 pm ET. Updates will occur the following day when reporting coincides with a federal holiday. Note: Daily updates (8 pm ET) might be delayed due to delays in reporting.

- The COVID-19 case and death surveillance data reported by jurisdictions to CDC are subject to change. These data, featured on [COVID Data Tracker](#) and within [Data.CDC.gov](#), may be incomplete for recent days due to processing and reporting delays. All data are provisional.

Case and Death Data

State cases and death metrics are for New York State excluding data for New York City. Testing metrics for New York State include data for New York City. The map can be modified to show:

- cases and deaths per 100,000 people in the last 7 days
- total new cases and deaths in the last 7 days
- rates for cases (cases/100,000 people) and deaths (deaths/100,000)

The 7-day cumulative rate is calculated (as current day + 6 preceding days) per 100,000 people using the [US Census Bureau Population Estimates Program](#) (2019 Vintages). Data for New York State or deaths per 100,000 people using the [US Census Bureau Population Estimates Program](#) (2019 Vintages).

Zero values for cases/deaths are subject to change due to reduced frequency of state reporting and subsequent adjustments for data that may occur. The 7-day case/death averages therefore may be artificially low over the weekend before adjustment to these zero values.
