

## Acute Flaccid Myelitis (AFM)

### AFM Cases and Outbreaks

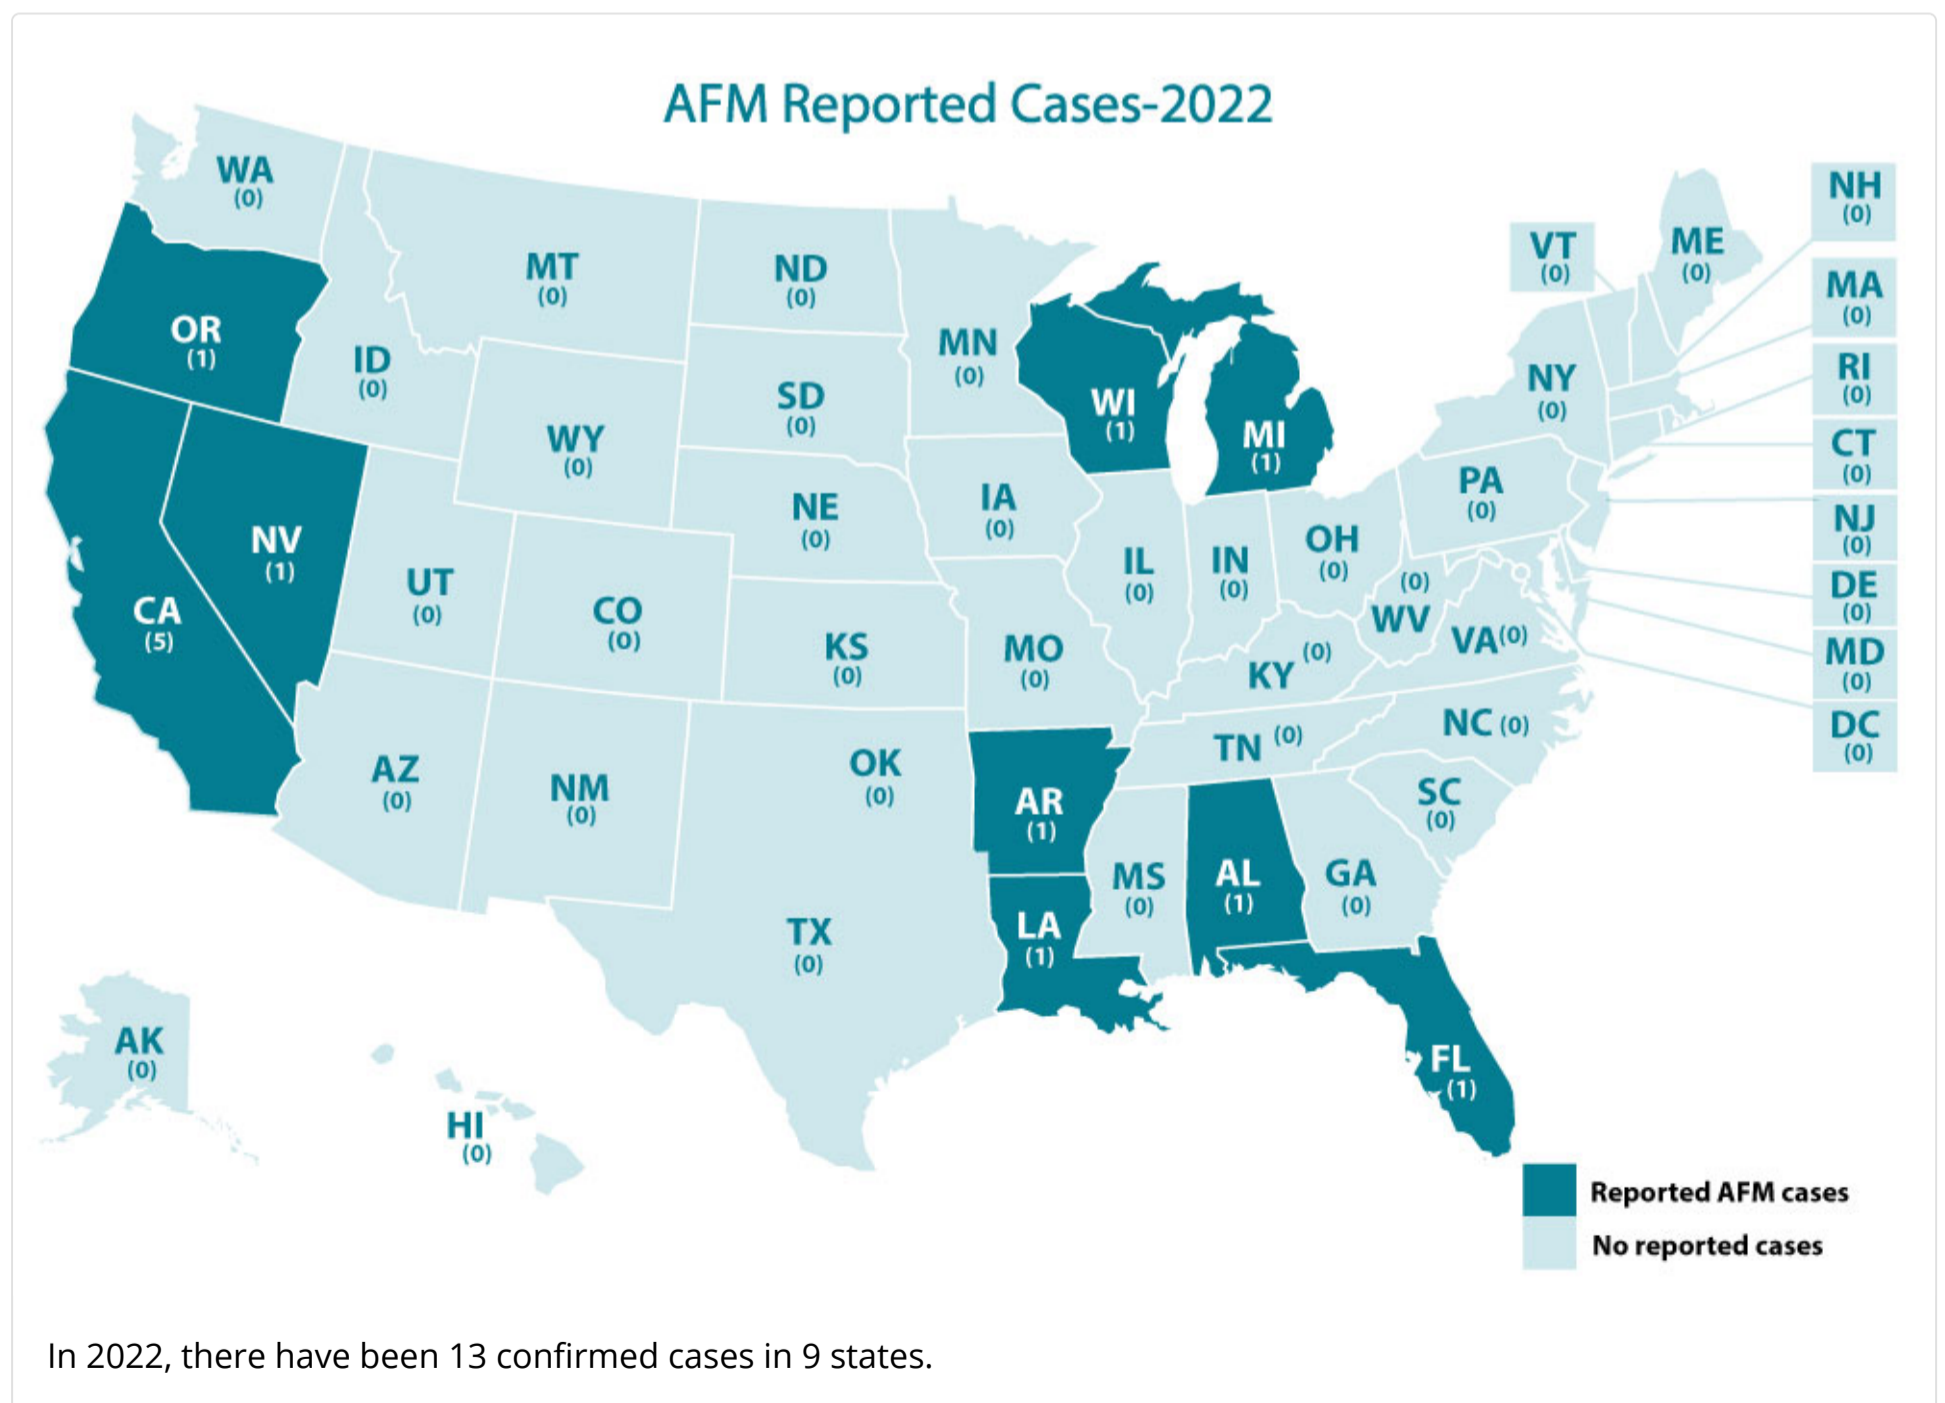

As of September 2, 2022, there have been **13 confirmed cases** in 2022 out of 33 reports of patients under investigation (PUIs).

There have been **692 confirmed cases** since CDC began tracking AFM in August of 2014. CDC has been thoroughly investigating cases since that time. We have seen increases in AFM cases, mostly in young children, in 2014, 2016 and 2018.

### Annual AFM Cases by State

Annual maps represent only cases for whom information was sent to and confirmed by CDC as of September 2, 2022. Patients under investigation are still being classified, and the case counts are subject to change. Cases of AFM have occurred in 49 states and the District of Columbia.

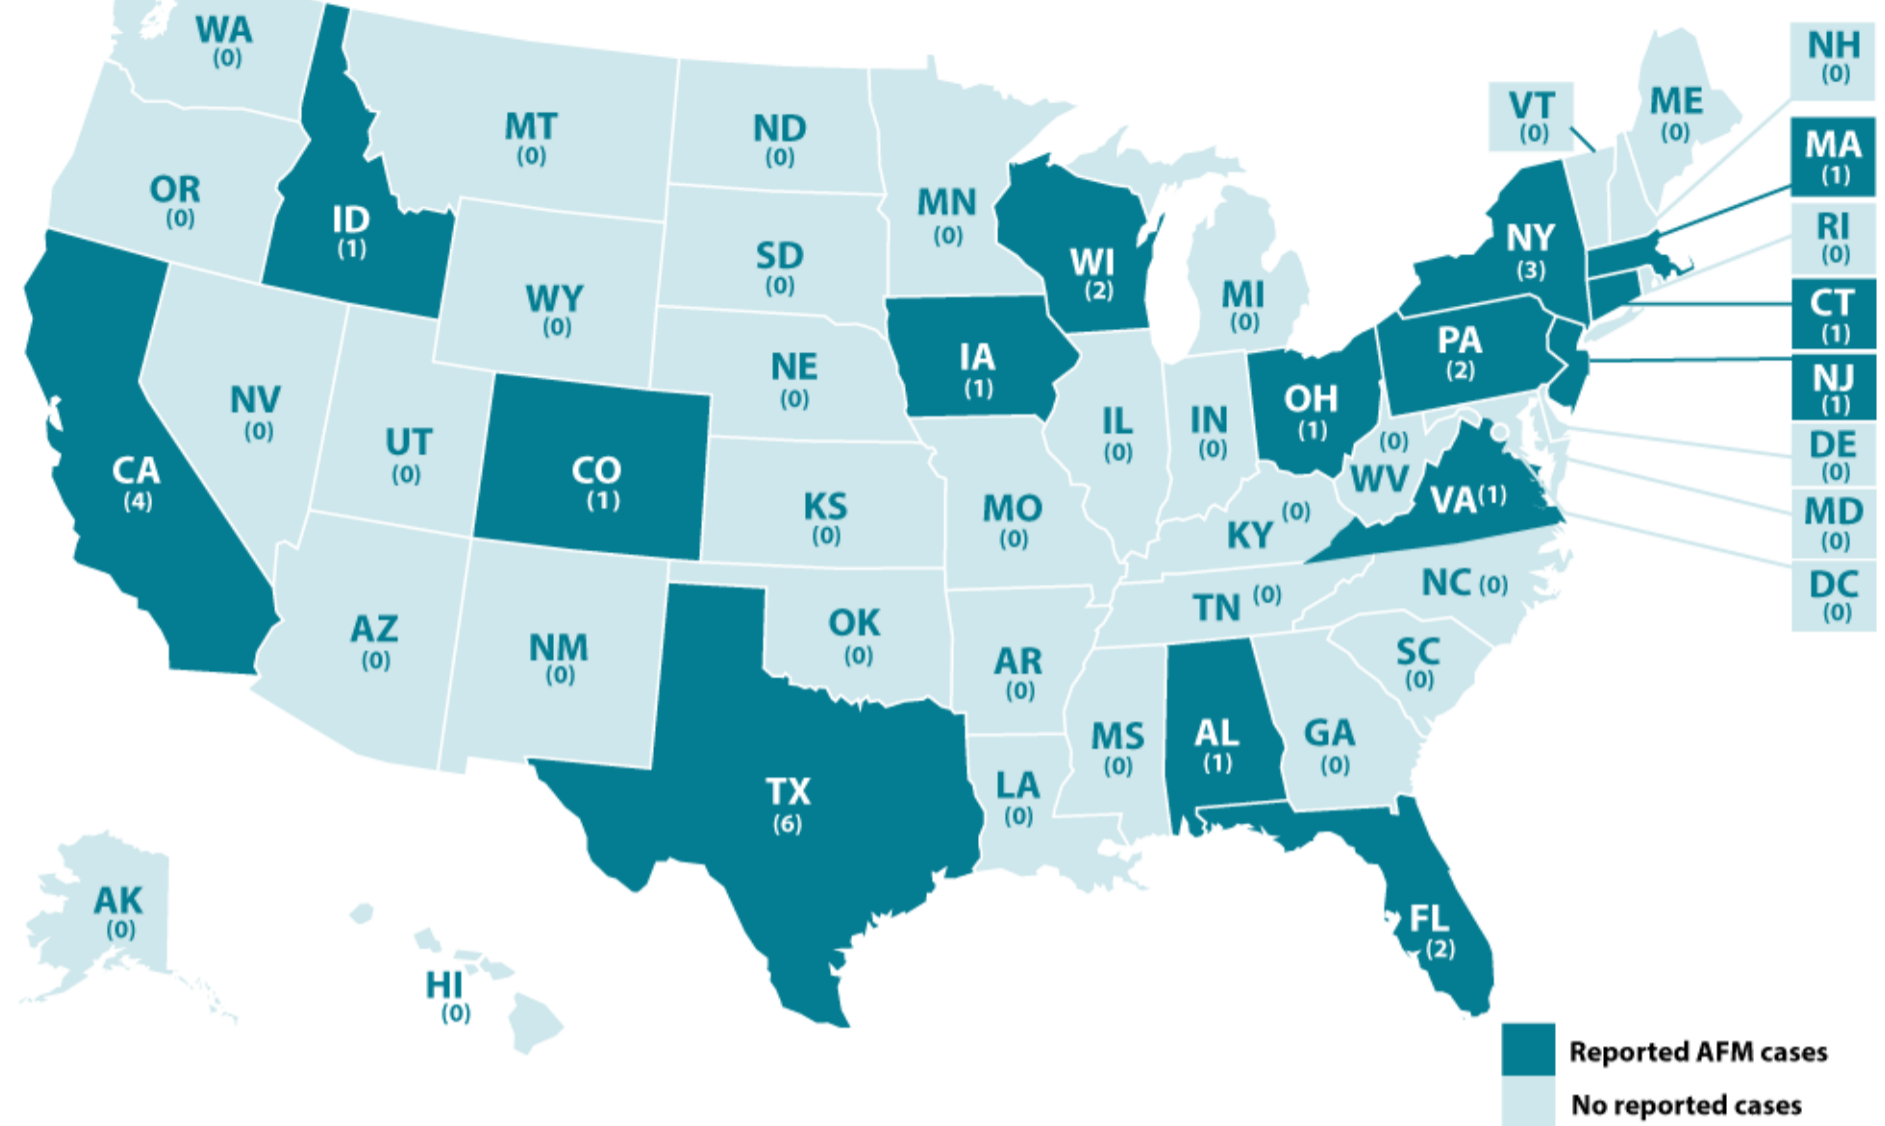

2022

2021

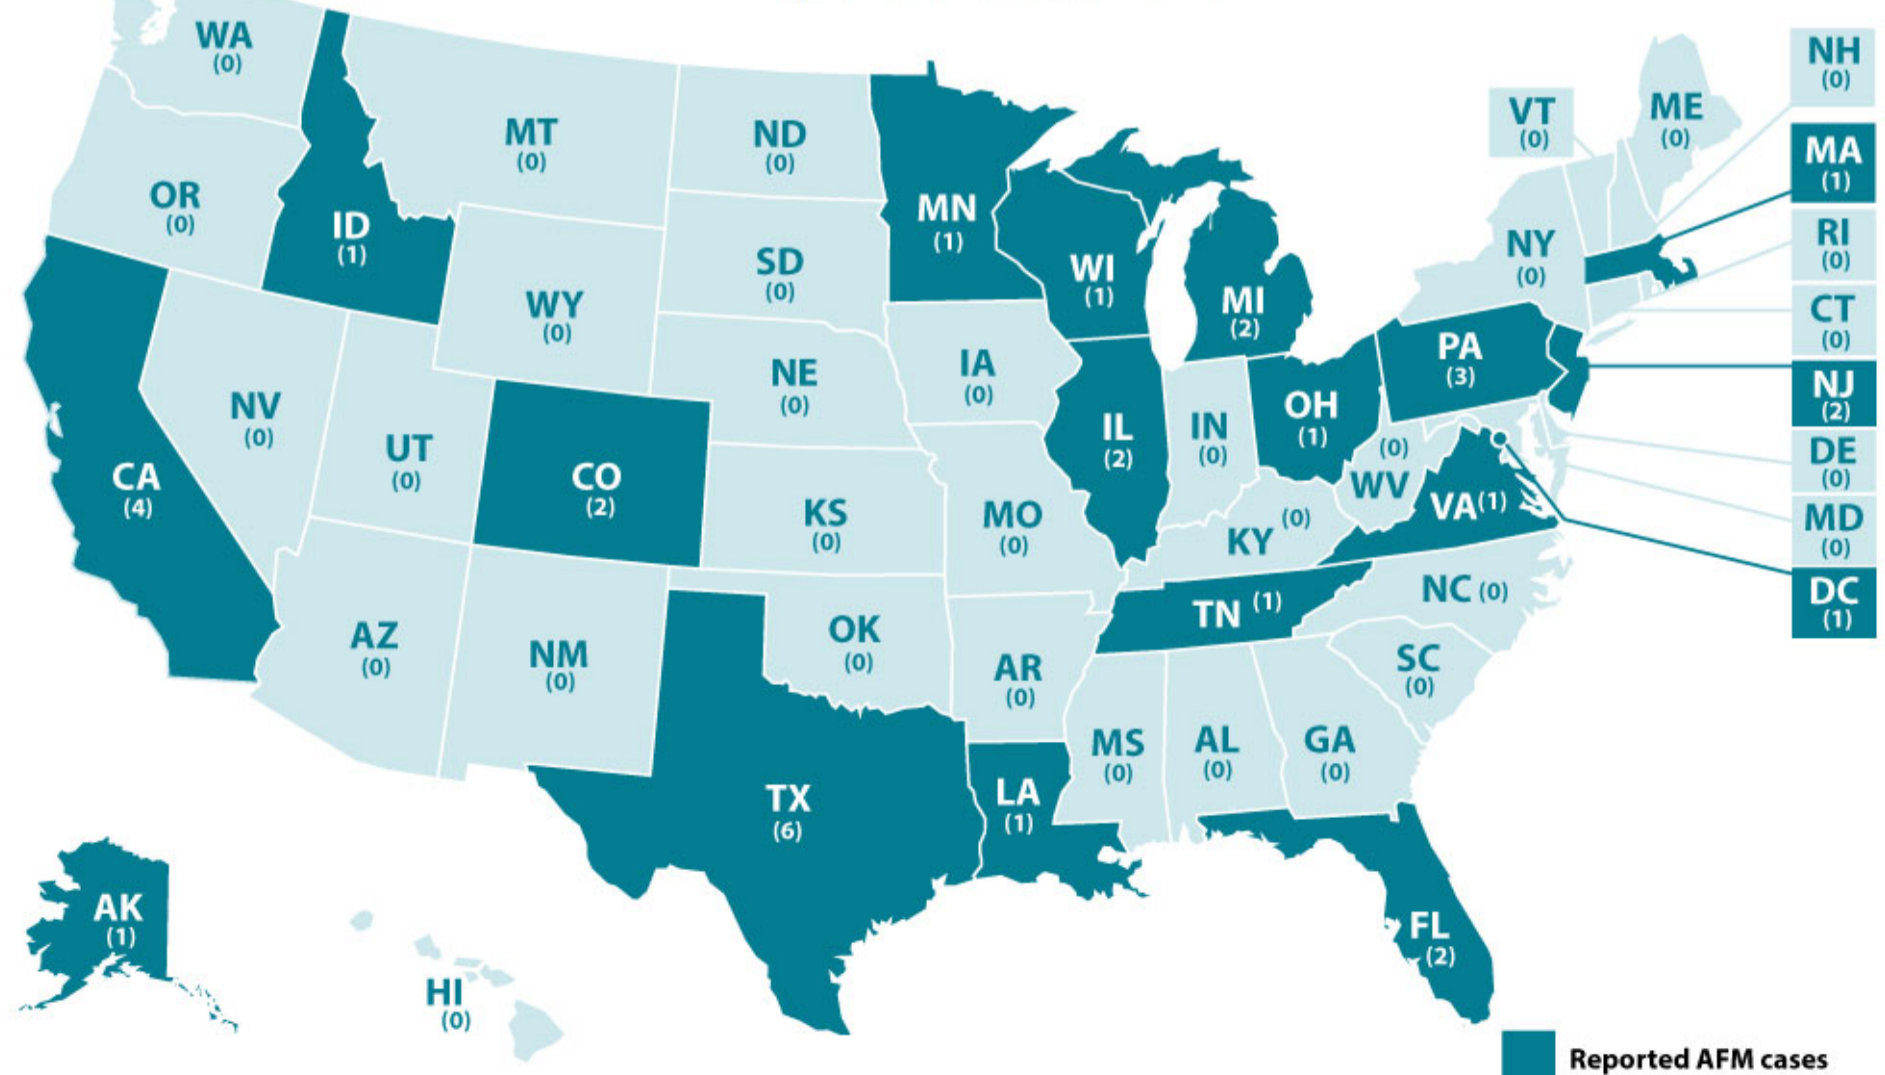

### AFM Reported Cases-2021

In 2021, there were 28 total confirmed cases in 15 states.

### AFM Reported Cases-2020

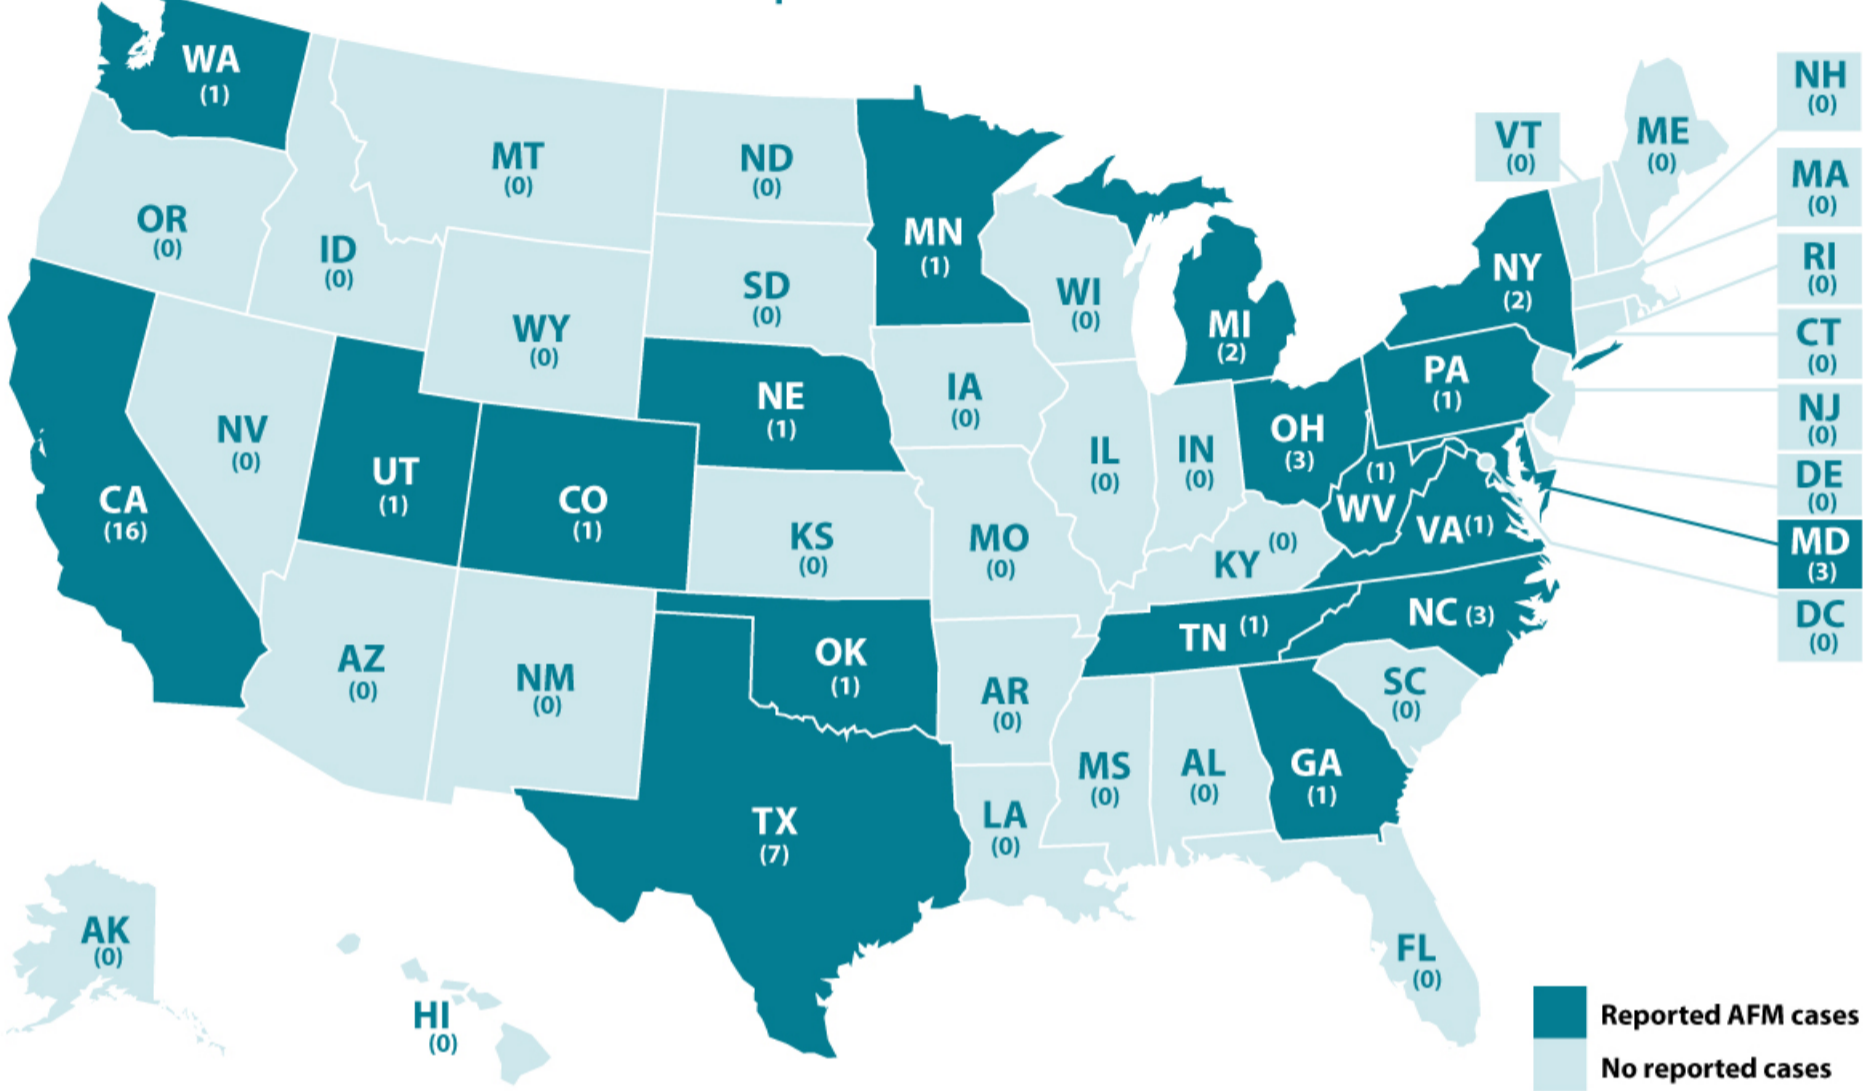

No reported cases

In 2020, there were 33 confirmed cases in 18 states and the District of Columbia.

2019

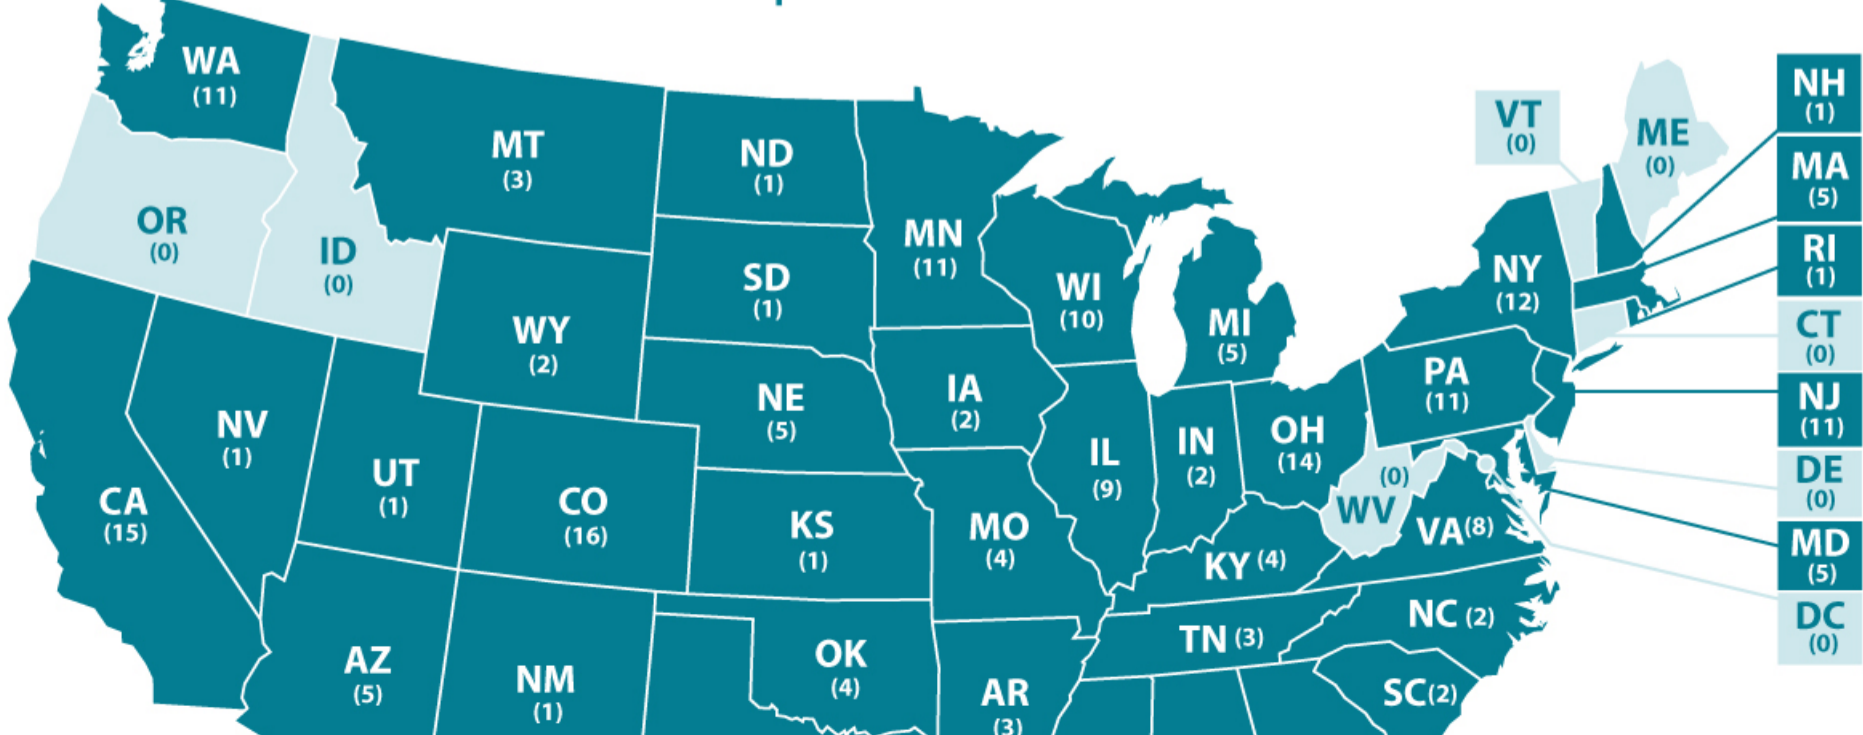

### AFM Reported Cases-2019

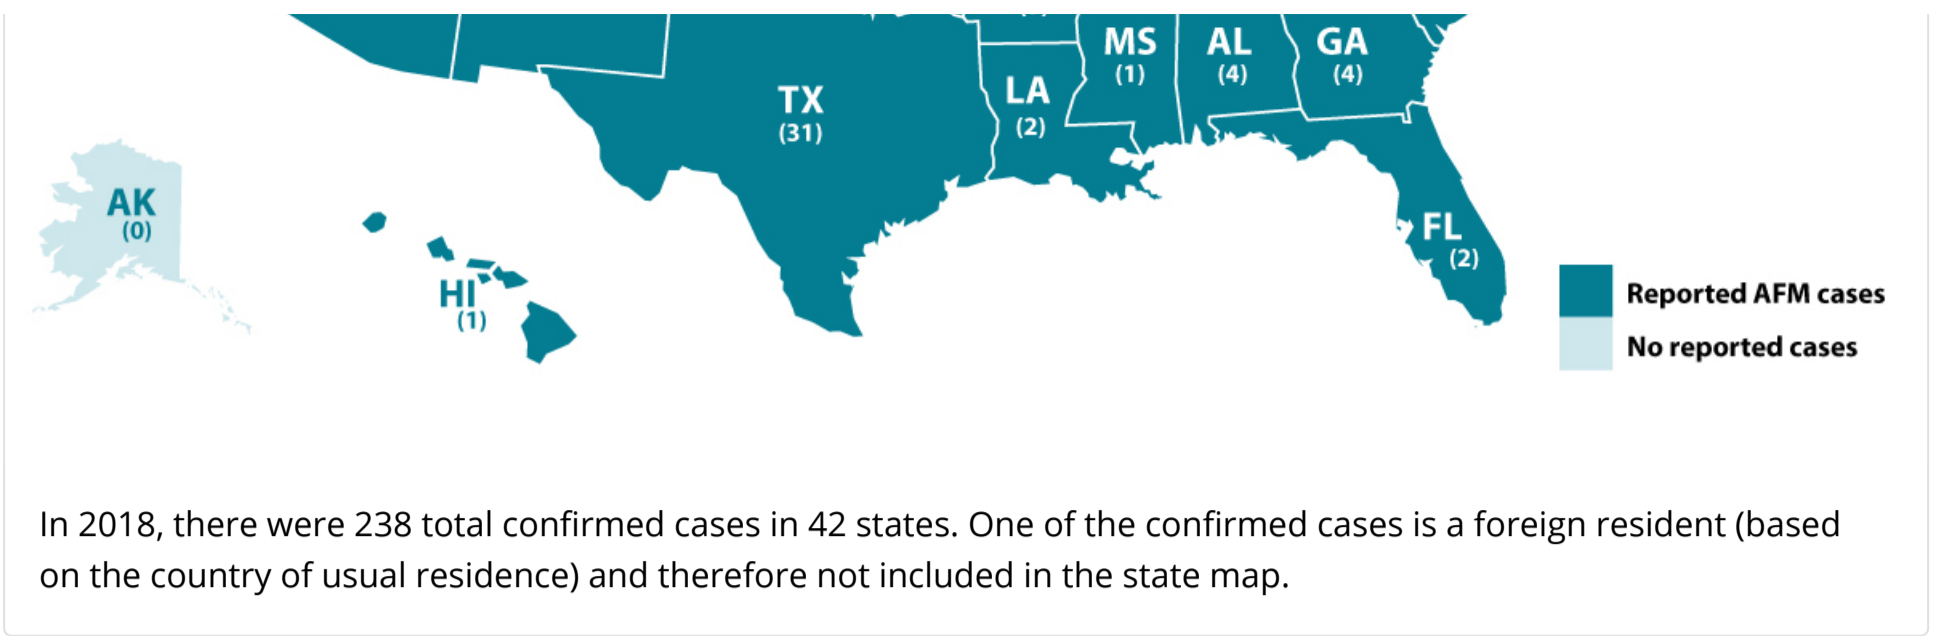

In 2019, there were 47 total confirmed cases in 18 states.

2018

### AFM Reported Cases-2018

2014

## AFM Reported Cases-2014

In 2014, there were 120 total confirmed cases in 34 states between the months of August and December. These case counts include only pediatric patients younger than 22 years of age.

We defer to the states to release additional information on cases as they choose.

## Cases by Month, 2014-2022

Most patients developed AFM between August and November, with increases in AFM cases in 2014, 2016, and 2018. Many viruses commonly circulate at this same time of year, including enteroviruses, which are likely responsible for the increase in cases in peak years.

## Confirmed AFM cases by CDC

Data table

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Total
2014	—	—	—	—	—	—	—	21	51	24	15	9	120
2015	2	2	1	0	1	0	2	3	1	4	2	4	22
2016	1	0	6	1	7	9	13	33	43	27	9	4	153
2017	2	5	5	4	2	4	3	1	4	0	3	5	38
2018	0	4	1	2	3	8	8	30	88	66	21	7	238
2019	2	4	4	3	5	2	5	4	6	7	2	3	47
2020	7	3	5	2	1	2	3	3	3	3	0	1	33
2021	3	2	3	1	3	3	2	2	2	1	3	3	28
2022	2	1	3	2	3	1	1	0	0	0	0	0	13

Confirmed cases of AFM by month of illness onset. Case Counts are subject to change.

^ Confirmed AFM cases by CDC from August 2014 through September 2, 2022. Case counts are subject to change.

\* The data shown from August 2014 to July 2015 are based on the AFM investigation case definition: onset of acute limb weakness on or after August 1, 2014, and a magnetic resonance image (MRI) showing a spinal cord lesion largely restricted to gray matter in a patient age ≤21 years.

† The data shown from August 2015 to present are based on the AFM case definition adopted by the Council of State and Territorial Epidemiologists (CSTE): acute onset of focal or flaccid limb weakness and an MRI showing spinal cord lesion largely restricted to gray matter and spanning one or more spinal segments, regardless of age.
