

Foodborne Outbreaks

Active Investigations of Multistate Foodborne Outbreaks

Last updated September 14, 2022 (updated every Wednesday)

CDC typically coordinates between 17 and 36 investigations of foodborne illnesses involving multiple states each week. The table below shows the number of active CDC investigations for *Listeria monocytogenes*, *Salmonella*, and Shiga toxin-producing *E. coli*. It also includes links to any current CDC outbreak notices.

Germ	Number of Active Investigations	CDC Outbreak Notices
<i>Listeria</i>	6	<ul style="list-style-type: none"> Food Safety Alert: Ice Cream
<i>Salmonella</i>	16	<ul style="list-style-type: none"> No current outbreak notices
<i>E. coli</i>	7	<ul style="list-style-type: none"> Food Safety Alert: Ground Beef Investigation Notice: Unknown Food Source

CDC works closely with our federal regulatory partners, FDA and USDA-FSIS, on foodborne outbreak investigations. For more information about how they work to identify and remove contaminated food from the market, visit their website:
