#### **Supplementary Figures:**

**Supplementary Figure 1: Gating strategy in human PBMCs. (A) B cell gating. (B) T cell gating.**

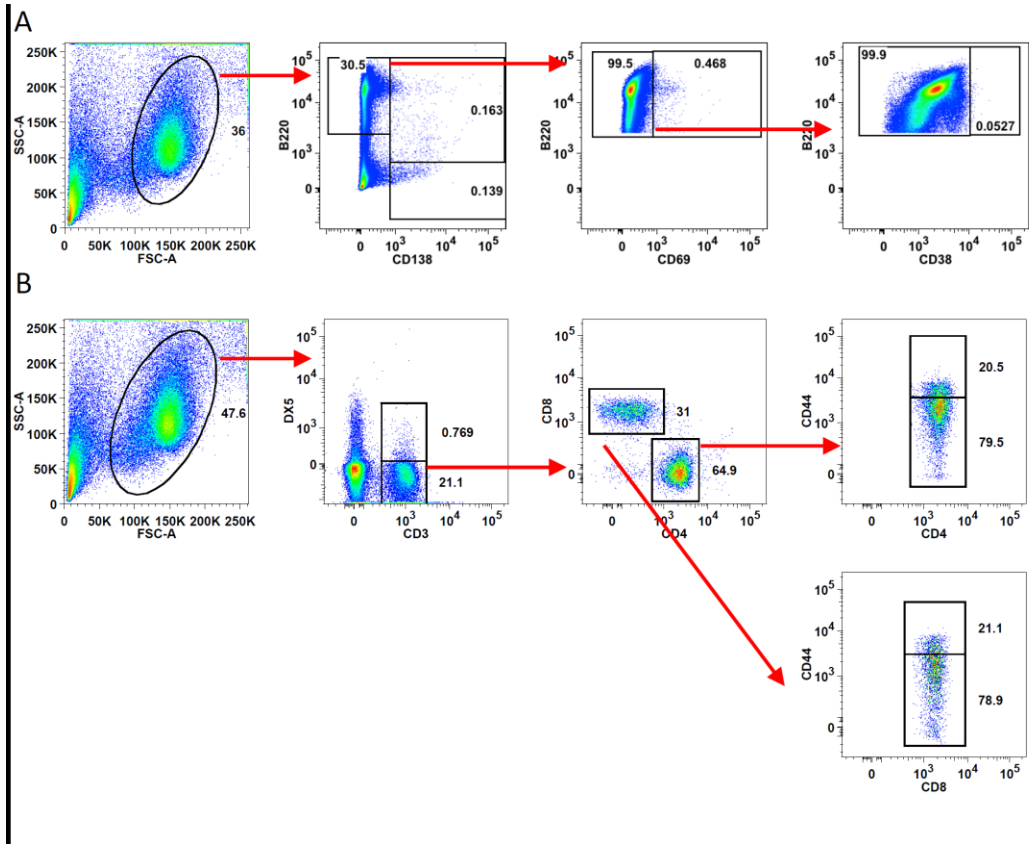

**Supplementary Figure 2: Gating strategy in mice. (A) B cell gating. (B) T cell gating.**

**Supplementary Figure 3: Influenza virus preferentially targets mouse innate cells expressing high levels of  $\alpha$ 2,3 sialic acids.** (A) Representative lectin binding and NS1-GFP expression of interstitial and alveolar macrophages and CD11b<sup>+</sup>/<sub>-</sub> dendritic cells before *in vivo* infection with PR8, (B) at day 1 p.i., (C) day 3 p.i., and (D) day 7 p.i. Pooled lung cells from 3-4 mice were used and the experiment was repeated at least twice.
