Appendix A. Effects of Homicide Exposure on Alternative Indicators of Pregnancy Desire, Estimated from Linear Models with Fixed-Effects

	Pronatalism	Antinatalism pole
	(-5/5)	(0/1)
Longer-term		
Ever exposed in any prior week	0.11*	-0.02**
	(0.05)	(0.01)
Constant	6.61	-0.90
	(7.27)	(1.26)
Cumulative		
Previously exposed once	0.10+	-0.02*
	(0.05)	(0.01)
Previously exposed twice	-0.04	-0.03+
	(0.09)	(0.02)
Previously exposed more than twice	0.46***	-0.06**
	(0.12)	(0.02)
Constant	6.78	-0.94
	(7.27)	(1.26)
Post-estimation tests of equality		
Exposed 1x v. 2x		
Exposed 1x v. >=3x		*
Exposed 2x v. >=3x	+	+

Note: In all models N=14,715 weeks from 387 women. All models adjust for time-varying age and previous exposure to police-involved fatalities during the RDSL study. Models further include month and year dummies and their interactions. Standard errors are shown in parentheses.
+p<.1, *p<.05, **p<.01, ***p<.001 (two-tailed tests).

Appendix B. Effects of Homicide Exposures on Pregnancy Desires, by Weeks Since Initial Exposure

	Any desire for pregnancy (0/1)					Strongest desire to avoid pregnancy (0/1)				
	M1: <=10 weeks	M2: 11-20 weeks	M3: 21-30 weeks	M4: 31-40 weeks	M5: 41-50 weeks	M1: <=10 weeks	M2: 11-20 weeks	M3: 21-30 weeks	M4: 31-40 weeks	M5: 41-50 weeks
Nearby homicides										
Exposed <=.25 Miles	-.004	.04**	.02	.03*	.07***	.01	-.02+	-.02	-.01	-.06***
	(.01)	(.01)	(.01)	(.01)	(.02)	(.01)	(.01)	(.01)	(.02)	(.02)
