

Pfizer-BioNTech COVID-19 Vaccine

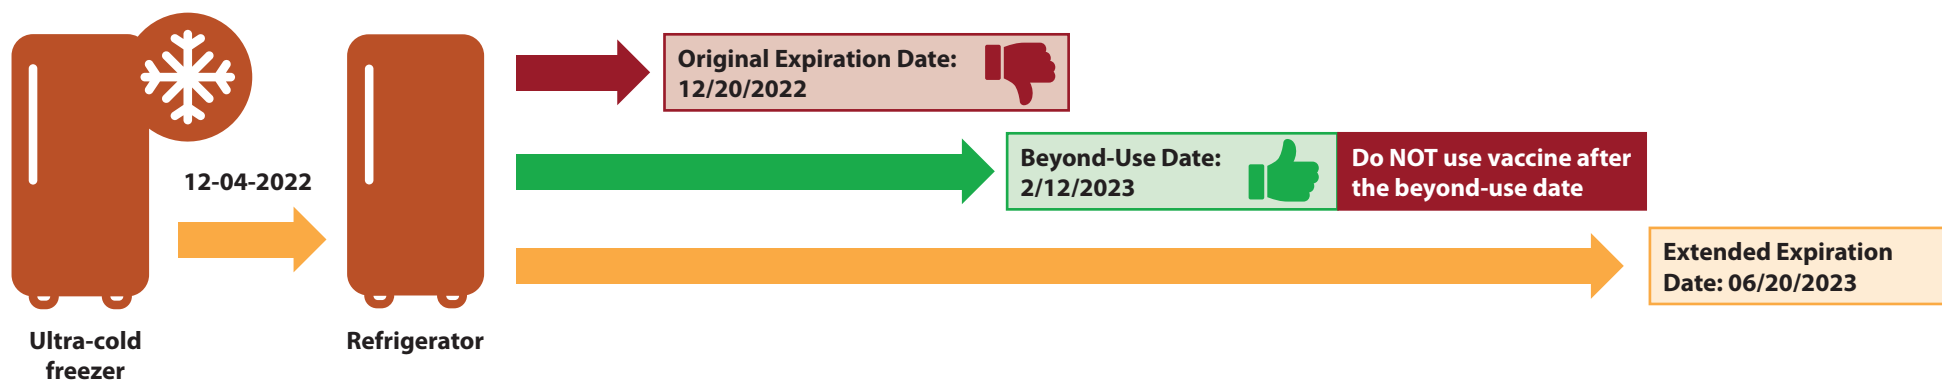

Expiration Date Extension and Beyond-Use Date

Recently the Food and Drug Administration (FDA) extended the expiration date for Pfizer-BioNTech COVID-19 Vaccine (monovalent and bivalent) from 12 to 18 months from manufacturer date. Before discarding any vaccine, providers should check the expiration date using Pfizer-BioNTech's expiration date tool at [Pfizer-BioNTech COVID-19 Lot Expiry \(cvdvaccine.com\)](https://www.cvdvaccine.com).

NOTE: This expiration date extension applies to both vaccine vials currently stored at ultra-cold temperatures (-90°C and -60°C [-130°F and -76°F]) or refrigerated temperatures (2°C and 8°C [36°F and 46°F])—even if these vials were moved to refrigerated temperatures prior to the extension.

Example

Vaccine (original expiration date = 12/20/2022) was removed from ultra-cold storage and placed in a refrigerator on 12/4/2022. Pfizer-BioNTech COVID-19 Vaccine stored in a refrigerator must be used within 10 weeks (beyond-use date [BUD]). Based on the date the vaccine was placed in the refrigerator, the vaccine's BUD is 2/12/2023. Without the expiration date extension, this vaccine could only be used up to the expiration date (12/20/2022)—not the full 10 weeks. **HOWEVER, with this extension, the expiration date is now AFTER the BUD. The vaccine can be used for the full 10 weeks.**
