# Active Investigations of Multistate Foodborne Outbreaks

*Last updated January 11, 2023 (updated every Wednesday)*

CDC typically coordinates between 17 and 36 investigations of foodborne illnesses involving multiple states each week. The table below shows the number of active CDC investigations for *Listeria monocytogenes*, *Salmonella*, and Shiga toxin-producing *E. coli*. It also includes links to any current CDC outbreak notices.

Germ	Number of Active Investigations	CDC Outbreak Notices
<a href="#">Listeria monocytogenes</a>	2	<ul style="list-style-type: none"> <li>Investigation Notice: <a href="#">Enoki Mushrooms</a></li> <li>Investigation Notice: <a href="#">Deli Meat and Cheese</a></li> </ul>
<a href="#">Salmonella</a>	2	<ul style="list-style-type: none"> <li>Food Safety Alert: <a href="#">Alfalfa Sprouts</a></li> </ul>
<a href="#">Shiga toxin-producing E. coli (STEC)</a>	0	<ul style="list-style-type: none"> <li>No active notices</li> </ul>

CDC works closely with our federal regulatory partners, FDA and USDA-FSIS, on foodborne outbreak investigations. For more information about how they work to identify and remove contaminated food from the market, visit their website:
