**Abbreviations:** MSM = men who have sex with men; PrEP = HIV preexposure prophylaxis.

\* Data reported to CDC as of March 16, 2023.

† The numerator is calculated as the number of JYNNEOS doses administered to all persons aged ≥13 years, by jurisdiction, who have been either partially or fully vaccinated. The total number of first doses and second doses displayed in this table might differ from total doses reported elsewhere based on the inclusion criteria for the coverage calculation.

§ Fully vaccinated is defined as receipt of 2 JYNNEOS doses on different days, irrespective of time interval, with the second dose administered ≥14 days earlier.

¶ The denominator represents the estimated population at increased risk for *Monkeypox virus* exposure, calculated by the following method: the number of MSM who are eligible for PrEP (among those aged ≥16 years) plus the number of MSM with HIV (among those aged ≥13 year) in each jurisdiction (data are publicly available via CDC AtlasPlus: <https://gis.cdc.gov/grasp/nchhstpatlas/tables.html>), plus a 25% increase for each jurisdiction to account for additional persons eligible for vaccination. Data accessed October 31, 2022 (state-level data) and November 2, 2022 (county-level data).
