# COVID Data Tracker

Maps, charts, and data provided by CDC, updates Thu by 8pm ET

[COVID-19 Home >](#)

The last update to this page will be made on May 11, 2023. On June 15, 2023, this page will be removed from COVID Data Tracker, and a new page displaying updated vaccination data will be available. National and state level data will continue to be reported at [CDC COVID Data Tracker: Vaccine Confidence](#) and [COVID VaxView](#).

## United States at a Glance

Collapse —

### United States

At a Glance

Data Table for the Average of the Percentages of the Population with at Least One Dose in United States by Urban-Rural Classification Type

CDC | Data as of: May 10, 2023 6:00am ET. Posted: May 11, 2023

Download Data

Date	Location
------	----------

Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC’s COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

#### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

- 0-0.25
- 0.2501-0.50
- 0.5001-0.75
- 0.7501-1.0

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

*Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.*

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses**.
- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

#### Record Management:

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.

Click [here](#) to view all historical record management updates.

## COVID-19 Vaccination Equity

Maps, charts, and data provided by CDC, updates weekly on Thursday by 8pm ET<sup>†</sup>

[The percent of the population coverage metrics are capped at 95%. Learn how CDC estimates vaccination coverage.](#)

### View:

- ☒ Social Vulnerability Index (SVI)
- ☐ Metro/Non-Metro
- ☐ Urbanicity Charts

### Metric:

- ☐ At Least One Dose
- ☒ Completed Primary Series
- ☐ Updated (Bivalent) Booster Dose

### Population:

- ☒ Total Population
- ☐ Population < 18 Years of Age
- ☐ Population ≥ 18 Years of Age
- ☐ Population ≥ 65 Years of Age

This shows county-level social vulnerability and the percentage of residents with a completed primary series.

Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC's COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

#### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

- 0-0.25
- 0.2501-0.50
- 0.5001-0.75
- 0.7501-1.0

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

*Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.*

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses**.
- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

**Record Management:**

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.

Click [here](#) to view all historical record management updates.

Data Table for the Average of the Percentages of the Population with an Updated (Bivalent) Booster in United States by Urban-Rural Classification Type

Date	Location
------	----------

## Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC's COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

- 0-0.25
- 0.2501-0.50
- 0.5001-0.75
- 0.7501-1.0

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

*Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.*

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster**

**dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses.**

- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

**Record Management:**

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.

Click [here](#) to view all historical record management updates.

Data Table for the Average of the Percentages of the Population with at Least One Dose in United States by Urban-Rural Classification Type

Date	Location
------	----------

## Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC's COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

- 0-0.25
- 0.2501-0.50
- 0.5001-0.75
- 0.7501-1.0

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

*Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.*

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster**

**dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses.**

- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

**Record Management:**

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.

Click [here](#) to view all historical record management updates.

Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC's COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

#### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

- 0-0.25
- 0.2501-0.50
- 0.5001-0.75
- 0.7501-1.0

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

*Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.*

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses**.
- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

**Record Management:**

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.

Data Table for the Average of the Percentages of the Population with at Least One Dose in United States by Urban-Rural Classification Type

CDC | Data as of: May 10, 2023 6:00am ET. Posted: May 11, 2023

Download Data

Date	Location
------	----------

Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC’s COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs

will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

#### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

*Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.*

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses**.
- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

#### Record Management:

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.

Click [here](#) to view all historical record management updates.

## Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC's COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

#### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

- 0-0.25
- 0.2501-0.50
- 0.5001-0.75
- 0.7501-1.0

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

*Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.*

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses**.
- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

#### Record Management:

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.

Click [here](#) to view all historical record management updates.

County	State	Metro status	County of Residence Reporting Completeness	Percent of total population with updated (bivalent) booster
Sublette County	WY	Non-metro	97.1	8.8
Sweetwater County	WY	Non-metro	97.1	9.2
Teton County	WY	Non-metro	97.1	24.3
Uinta County	WY	Non-metro	97.1	9.7
Washakie County	WY	Non-metro	97.1	7.3
Weston County	WY	Non-metro	97.1	8.6

Data Table for the Average of the Percentages of the Population with an Updated (Bivalent) Booster in United States by Urban-Rural Classification Type

#### Footnotes

**Timing:**<sup>†</sup> Data will be updated after review and verification, usually before 8:00 pm ET. Note: Weekly updates might be delayed due to delays in reporting.

- Data on doses of vaccine distributed and administered include data received by CDC as of 6:00 am ET on Wednesdays.
- Vaccination data on CDC's COVID Data Tracker are updated weekly on Thursdays between 1:30 pm and 8:00 pm ET.
- Updates will occur the following day when Thursday reporting coincides with a federal holiday.
- Beginning **June 13, 2022**, instead of daily, jurisdictions and other partners will report vaccine administration and delivery data to CDC weekly on Wednesdays by 6 AM ET. As a result, instead of daily, the following COVID Data Tracker tabs will be refreshed weekly on Thursday by 8:00 PM ET: [Vaccinations in the United States](#), [Vaccinations by County](#), [Vaccination Trends](#), [Vaccination Demographic Trends](#), and [Vaccination Equity](#).

Visit the [COVID-19 Vaccination Data in the United States](#) pages for more information about COVID-19 vaccination data, including data definitions.

This site provides a county-level view of **COVID-19 vaccination coverage**, **Social vulnerability**, and **Metropolitan vs. Non-Metropolitan**:

- **Social vulnerability** is measured by [CDC Social Vulnerability Index \(SVI\)](#), which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.
- **Metropolitan vs. Non-Metropolitan** classification is based off an aggregation of the six [2013 National Center for Health Statistics \(NCHS\) Urban-Rural classifications](#), where "Metro" counties include Large Central Metro, Large Fringe Metro, Medium Metro, and Small Metro and "Non-Metro" counties include Micropolitan and Non-Core (Rural).

#### Methodology:

**Vaccination Data:** CDC's COVID Data Tracker includes vaccination data reported by state and, where applicable, local Immunization Information Systems (IISs). If an individual is vaccinated outside of the region covered by their local IIS, that dose will be reported to the state IIS and may not be reflected in the county-level totals reported by the local IIS.

**County of Residence:** CDC determines the county of residence for vaccine recipients based on the reported county Federal Information Processing Standard State (FIPS) code for the corresponding state. CDC makes every effort to determine the county of residence for all administered and reported doses. However, systematic missing data

in some states, either reported through jurisdiction, retail pharmacies, long-term care facilities, or federal entity facilities, may result in vaccination coverage by county appearing artificially low. CDC has excluded from county-level summary measures vaccination records missing county of residence.

**County Reporting Completeness:** Represents the proportion of people with a completed primary series whose FIPS code is reported and matches a valid county FIPS code in the jurisdiction. **States with lower percentages for valid county of residence should be interpreted with caution.**

**Map Notes:** CDC generates these maps by categorizing each percentage-based metric into four classes, SVI rank into four classes based on quartiles, and 2013 NCHS Urban-Rural classifications into two classes based on metro/non-metro status. Vaccination metrics are then combined with SVI rank to visualize county-level vaccination coverage by social vulnerability. Separately, vaccination metrics are combined with NCHS Urban-Rural classifications to visualize county-level vaccination coverage by metro/non-metro status.

**2013 NCHS Urban-Rural Classification Notes:** This chart shows trends of the average of percentages of the total population that has completed a primary series or received a first booster dose by urban-rural classification type at the national and jurisdictional levels. County-of-residence reporting completeness varies across states and territories. Therefore, the percent of the population that completed a primary series or received a first booster dose at the state/territory level might not align with the percent of the population that completed a primary series or received a first booster dose for each of the stratified urban-rural levels because the stratified values are county-level averages. **States with lower county reporting completeness should be interpreted with caution.**

#### CDC Social Vulnerability Index (SVI) Classification:

Overall social vulnerability is measured by [CDC Social Vulnerability Index \(SVI\)](#), vintage 2020, which uses U.S. Census data on categories like poverty, housing, and vehicle access to estimate a community's ability to respond to and recover from disasters or disease outbreaks.

- 0-0.25
- 0.2501-0.50
- 0.5001-0.75
- 0.7501-1.0

#### 2013 NCHS Metro/Non-Metro Classification:

**Metro vs. Non-Metro** status and **Urbanicity** are defined using the [2013 National Center for Health Statistics \(NCHS\) Urban-Rural Classification Scheme for Counties](#).

**Metro vs. Non-Metro** classification type is an aggregation of the six NCHS Urban/Rural Classification schemes:

- **"Metro" counties** include Large Central Metropolitan, Large Fringe Metropolitan, Medium Metropolitan, and Small Metropolitan classifications.
- **"Non-Metro" counties** include Micropolitan and Non-Core (Rural) classifications.

The six NCHS Urban/Rural Classification schemes are:

- **Large Central Metropolitan** - Counties in Metropolitan Statistical Areas (MSAs) of 1 million or more population that
  - Contain the entire population of the largest principal city of the MSA, or
  - Have their entire population contained in the largest principal city of the MSA, or
  - Contain at least 250,000 inhabitants of any principal city of the MSA
- **Large Fringe Metropolitan** - Counties in MSAs of 1 million or more population that did not qualify as large central metro counties
- **Medium Metropolitan** - Counties in MSAs of populations of 250,000 to 999,999
- **Small Metropolitan** - Counties in MSAs of populations of 50,000 to 249,999
- **Micropolitan** - Counties in micropolitan statistical areas of 10,000 to 49,999
- **Noncore** - Non-metropolitan counties that did not qualify as micropolitan

Counties in Puerto Rico do not have individual 2013 NCHS urban-rural classification types available.

#### Vaccination Data Updates:

Recent changes to vaccine data are reported below, when available.

Click [here](#) to view all historical vaccine data updates.

- **New Hampshire** lifted its national COVID-19 emergency response declaration in May 2021, which allows vaccine recipients to opt out of having their COVID-19 vaccinations included in the state's Immunization Information System registry. As such, data submitted by New Hampshire since May 2021 may not be representative of all COVID-19 vaccination occurring in the state.
  - Effective **July 14, 2022**, New Hampshire will only report year of birth instead of full birthdate for vaccine recipients to CDC. This will result in numbers and rates for some age groups being under- or over-estimated.
- On September 1, 2022, CDC [recommended](#) updated COVID-19 boosters from Pfizer-BioNTech for people ages 12 years and older and from Moderna for people ages 18 years and older. The **first booster dose** and **second booster dose** metrics currently on COVID-19 Data Tracker **include administrations of both the previously recommended and updated booster doses**.
- On **December 1, 2022**, the daily number of vaccine doses administered for New Hampshire was 132,994 doses. This total includes recent dose administrations and historic dose administrations from the 6 weeks prior that had not been reported to CDC by New Hampshire.
- On **December 14, 2022**, the daily number of vaccine doses administered for Delaware was 96,912 doses. This total includes recent dose administrations and historic dose administrations from the month prior that had not been reported to CDC by Delaware.

#### Record Management:

Beginning July 14, 2021, entities have the ability to update or delete their previously submitted records. Recent record management updates are reported below, when available.
