* Cases per 100,000 population. Rates were calculated by using summed case counts and population size (persons aged 15-64 years) by gender and each level of urban-rural status, multiplied by 100,000.
${ }^{+}$Urban-rural status of county of residence is based on the 2013 National Center for Health Statistics (NCHS) Urban-Rural Classification Scheme for Counties. The two Nonmetro categories were combined into one rural (i.e., nonmetropolitan) category.
${ }^{\S}$ Estimates based on <3 cases and therefore might be unreliable
${ }^{\text {T }}$ Single-race population estimates, United States, 2020-2021. July 1 resident population by state, county, age, sex, single-race, and Hispanic origin, on CDC WONDER Online Database. CDC County-level data is available in 5-year data increments. Vintage 2021 estimates released by U.S. Census Bureau on June 30, 2022. **All persons who reported Hispanic or Latino (Hispanic) ethnicity, regardless of race, were categorized as Hispanic. Persons who did not report ethnicity as Hispanic (including missing ethnicity) were categorized as nonHispanic and reported race in the following categories: AI/AN, Asian, Black or African American, NH/OPI, White, and multiple races (more than one race category selected) or other race. Persons with missing data on ethnicity and race were categorized as missing or unknown. Among the 29,311 cases reported in 2022, 1,727 cases were missing data on race and ethnicity. Among cases reported in Black or African American (9,171), 20 were missing information on county of residence, therefore incidence rates for Black or African American persons were calculated from a total of 9,151 mpox cases. Among cases reported in Hispanic or Latino persons $(8,526), 26$ were missing information on county of residence, therefore incidence rates for Hispanic or Latino persons were calculated from a total of 8,500 mpox cases. Finally, 29 mpox cases reported among White persons $(8,079)$ were missing information on county of residence; therefore, incidences for White persons were calculated from a total of 8,050 cases.
