## SUPPLEMENTARY FIGURE 3. Prevalences of vaccine-induced, infection-induced, and hybrid<sup>¶</sup> immunity<sup>†</sup> against SARS-CoV-2 among blood donors aged ≥16 years, by race and ethnicity<sup>§</sup> — United States, April 2021–September 2022

<sup>¶</sup> Immunity derived from a combination of vaccination and infection.

<sup>†</sup> Ascertained by the presence of anti-spike antibodies (present in both COVID-19–vaccinated and SARS-CoV-2–infected persons) and anti-nucleocapsid antibodies (present only in previously infected persons) and self-reported history of vaccination.

<sup>§</sup> Persons of Hispanic or Latino (Hispanic) origin might be of any race but are categorized as Hispanic; all racial groups are non-Hispanic.

<sup>\*</sup> Includes American Indian or Alaska Native and non-Hispanic persons of other races.
