Influenza (Flu) (</flu/index.htm>)

Weekly U.S. Influenza Surveillance Report

Updated June 16, 2023

FLUVIEW

A Weekly Influenza Surveillance Report Prepared by the Influenza Division

2022-2023 Influenza Season

Week 23 ending June 10, 2023

All data in this report are preliminary and may change as more reports are received.

A description of the CDC influenza surveillance system, including methodology and detailed descriptions of each data component, is available on the [surveillance methods](http://www.cdc.gov/flu/weekly/overview.htm) (<http://www.cdc.gov/flu/weekly/overview.htm>) page.

Additional information on the current and previous influenza seasons for each surveillance component is available on [FluView Interactive](https://www.cdc.gov/flu/weekly/fluviewinteractive.htm) (<https://www.cdc.gov/flu/weekly/fluviewinteractive.htm>).

U.S. Virologic Surveillance

(<https://www.cdc.gov/flu/weekly/overview.htm#LabSurveillance>)

Clinical Laboratories

The results of tests performed by clinical laboratories nationwide are summarized below. Data from clinical laboratories (the percentage of specimens tested that are positive for influenza) are used to monitor whether influenza activity is increasing or decreasing.

	Week 23	Data Cumulative since October 2, 2022 (Week 40)
No. of specimens tested	25,830	3,530,424
No. of positive specimens (%)	255 (1.0%)	353,954 (10.0%)
Positive specimens by type		
Influenza A	139 (54.5%)	346,167 (97.8%)

	Week 23	Data Cumulative since October 2, 2022 (Week 40)
Influenza B	116 (45.5%)	7,787 (2.2%)

(<http://gis.cdc.gov/grasp/fluview/fluportaldashboard.html>)

[View Chart Data \(/flu/weekly/weeklyarchives2022-2023/data/whoAllregt_cl23.html\)](/flu/weekly/weeklyarchives2022-2023/data/whoAllregt_cl23.html) | [View Full Screen \(/flu/weekly/WeeklyArchives2022-2023/WHONPHL23.html\)](/flu/weekly/WeeklyArchives2022-2023/WHONPHL23.html)

Public Health Laboratories

The results of tests performed by public health laboratories nationwide are summarized below. Data from public health laboratories are used to monitor the proportion of circulating viruses that belong to each influenza subtype/lineage. Viruses known to be associated with recent live attenuated influenza vaccine (LAIV) receipt or found upon further testing to be a vaccine virus are not included as they are not circulating influenza viruses.

	Week 23	Data Cumulative since October 2, 2022 (Week 40)
No. of specimens tested	2,441	257,498
No. of positive specimens	39	29,736
<i>Positive specimens by type/subtype</i>		

	Week 23	Data Cumulative since October 2, 2022 (Week 40)
Influenza A	13 (33.3%)	28,759 (96.7%)
(H1N1)pdm09	9 (90.0%)	6,687 (27.6%)
H3N2	1 (10.0%)	17,529 (72.4%)
H3N2v	0	1 (<0.1%)
Subtyping not performed	3	4,542
Influenza B	26 (66.7%)	977 (3.3%)
Yamagata lineage	0	0
Victoria lineage	21 (100%)	756 (100%)
Lineage not performed	5	221

Outpatient Respiratory Illness Surveillance

(https://www.cdc.gov/flu/weekly/overview.htm#ILINet)

The U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) monitors outpatient visits for respiratory illness referred to as influenza-like illness [ILI (fever plus cough or sore throat)], not laboratory-confirmed influenza, and may capture respiratory illness visits due to infection with any pathogen that can present with similar symptoms, including influenza, SARS-CoV-2, and RSV. Therefore, it is important to evaluate syndromic surveillance data, including that from ILINet, in the context of other sources of surveillance data to obtain a complete and accurate picture of influenza, SARS-CoV-2, and other respiratory virus activity. Other respiratory virus surveillance data can be found on CDC’s COVID Data Tracker (https://covid.cdc.gov/covid-data-tracker/#datatracker-home), NCIRD Surveillance Systems website (https://www.cdc.gov/ncird/surveillance/index.html) and National Respiratory and Enteric Virus Surveillance System (NREVSS) website (https://www.cdc.gov/surveillance/nrevss/index.html).

Outpatient Respiratory Illness Visits

Nationwide during week 23, 1.6% of patient visits reported through ILINet were due to respiratory illness that included fever plus a cough or sore throat, also referred to as ILI. Multiple respiratory viruses are co-circulating, and the relative contribution of influenza virus infection to ILI varies by location.

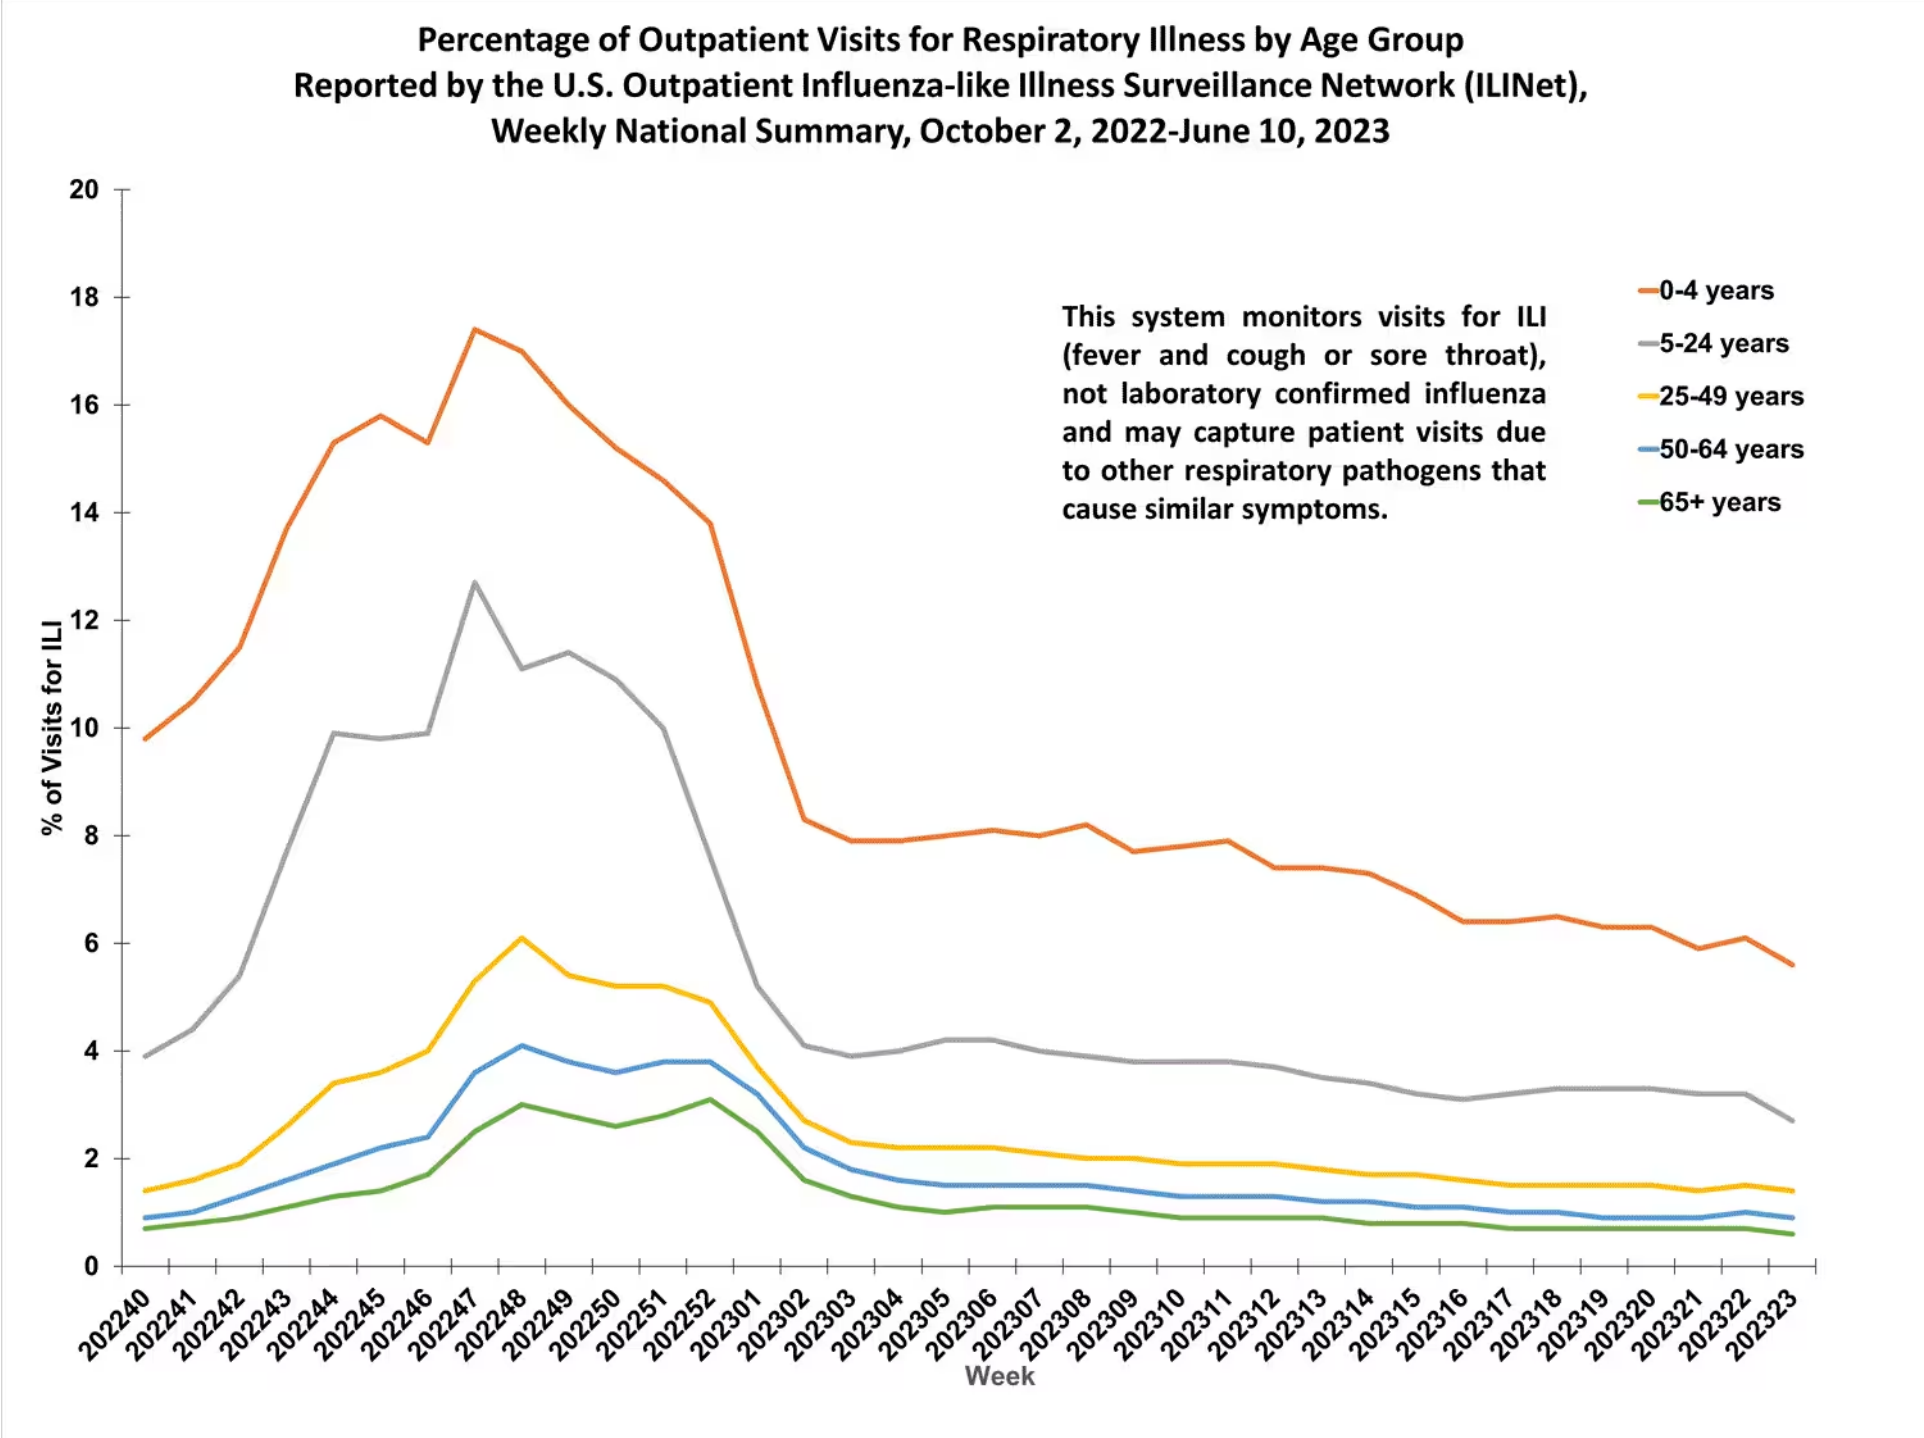

(http://gis.cdc.gov/grasp/fluview/fluportaldashboard.html)

* Effective October 3, 2021 (week 40), the ILI definition (fever plus cough or sore throat) no longer includes “without a known cause other than influenza.”

Outpatient Respiratory Illness Visits by Age Group

More than 70% of ILINet participants provide both the number of patient visits for respiratory illness and the total number of patient visits for the week broken out by age group. Data from this subset of providers are used to calculate the percentages of patient visits for respiratory illness by age group.

During week 23, the percentage of visits for respiratory illness reported in ILINet was 5.6% among those 0-4 years, 2.7% among those 5-24 years, 1.4% among those 25-49 years, 0.9% among those 50-64 years, and 0.6% among those 65 years and older.

(<http://gis.cdc.gov/grasp/fluview/fluportaldashboard.html>)

[View Chart Data \(/flu/weekly/weeklyarchives2022-2023/data/iliage23.html\)](/flu/weekly/weeklyarchives2022-2023/data/iliage23.html) | [View Full Screen \(/flu/weekly/weeklyarchives2022-2023/ILIAge23.html\)](/flu/weekly/weeklyarchives2022-2023/ILIAge23.html)

Outpatient Respiratory Illness Activity Map

Data collected in ILINet are used to produce a measure of [ILI activity*](#) (https://www.cdc.gov/flu/weekly/overview.htm#anchor_1633697504110) by state/jurisdiction and Core Based Statistical Areas (CBSA).

Activity Level	Number of Jurisdictions		Number of CBSAs	
	Week 23 (Week ending Jun. 10, 2023)	Week 22 (Week ending Jun. 3, 2023)	Week 23 (Week ending Jun. 10, 2023)	Week 22 (Week ending Jun. 3, 2023)
Very High	0	0	1	1

Hospitalization Surveillance

(http://www.cdc.gov/flu/weekly/overview.htm#HospitalizationSurv)

FluSurv-NET

The Influenza Hospitalization Surveillance Network (FluSurv-NET) conducts population-based surveillance for laboratory-confirmed influenza-related hospitalizations in select counties in 13 states and represents approximately 9% of the U.S. population. FluSurv-NET hospitalization data are preliminary. Patients admitted for laboratory-confirmed influenza-related hospitalization after April 30, 2023, will not be included in FluSurv-NET for the 2022-2023 season. Data on patients admitted through April 30, 2023, will continue to be updated on FluView Interactive as additional information is received.

Additional FluSurv-NET hospitalization surveillance information for current and past seasons and additional age groups:
Surveillance Methods (https://www.cdc.gov/flu/weekly/overview.htm#FluSurvNet) | FluView Interactive: Rates by Age, Sex, and Race/Ethnicity (http://gis.cdc.gov/GRASP/Fluview/FluHospRates.html) or Data on Patient Characteristics
(http://gis.cdc.gov/grasp/fluview/FluHospChars.html) | RESP-NET Interactive (https://www.cdc.gov/surveillance/resp-net/dashboard.html)

HHS Protect Hospitalization Surveillance

Hospitals report to HHS Protect the number of patients admitted with laboratory-confirmed influenza. During week 23, 850 patients with laboratory-confirmed influenza were admitted to a hospital.

Additional HHS Protect hospitalization surveillance information:
Surveillance Methods (<https://www.cdc.gov/flu/weekly/overview.htm#HHSProtect>) | Additional Data [↗](https://healthdata.gov/Hospital/COVID-19-Reported-Patient-Impact-and-Hospital-Capa/anag-cw7u) (<https://healthdata.gov/Hospital/COVID-19-Reported-Patient-Impact-and-Hospital-Capa/anag-cw7u>)

Mortality Surveillance

(<https://www.cdc.gov/flu/weekly/overview.htm#MortalitySurveillance>)

National Center for Health Statistics (NCHS) Mortality Surveillance

Based on NCHS mortality surveillance data available on June 15, 2023, 6.3% of the deaths that occurred during the week ending June 10, 2023 (week 23), were due to pneumonia, influenza, and/or COVID-19 (PIC). This percentage is above the epidemic threshold of 6.1% for this week. Among the 1,295 PIC deaths reported for this week, 233 had COVID-19 listed as an underlying or contributing cause of death on the death certificate, and 10 listed influenza. The data presented are preliminary and may change as more data are received and processed.

Additional pneumonia, influenza and COVID-19 mortality surveillance information for current and past seasons:
[Surveillance Methods](https://www.cdc.gov/flu/weekly/overview.htm#NCHSMortality) (<https://www.cdc.gov/flu/weekly/overview.htm#NCHSMortality>) | [FluView Interactive](https://gis.cdc.gov/grasp/fluview/mortality.html) (<https://gis.cdc.gov/grasp/fluview/mortality.html>)

Influenza-Associated Pediatric Mortality

Three influenza-associated pediatric deaths were reported to CDC during week 23.

One death was associated with an influenza A virus for which no subtyping was performed and occurred during week 49 of 2022 (the week ending December 10, 2022).

Two deaths were associated with influenza B viruses. One of these deaths was associated with an influenza B virus for which the lineage was not determined and occurred during week 7 of 2023 (the week ending February 18, 2023). The other death was associated with an influenza B/Victoria virus and occurred during week 22 of 2023 (the week ending June 3, 2023).
