

**SUPPLEMENTARY TABLE. Odds ratios for completing the mpox vaccine series, by those whose first dose was administered subcutaneously versus intradermally— California, August 9, 2023–March 31, 2023**

<b>Characteristic</b>	<b>Odds Ratio (99% CI)*</b>
<b>Total</b>	<b>0.97 (0.94–1.00)</b>
<b>Sex assigned at birth</b>	
Female	0.86 (0.80–0.93)
Male	0.99 (0.96–1.02)
Unknown or other†	NA
<b>Race and ethnicity</b>	
Asian, NH	0.98 (0.90–1.06)
Black or African American, NH	0.99 (0.90–1.10)
White, NH	0.97 (0.93–1.02)
Hispanic or Latino	0.96 (0.90–1.01)
Multiracial/Other	1.00 (0.90–1.11)
Unknown	NA
<b>Age group, yrs</b>	
18–24	0.96 (0.87–1.05)
25–34	0.99 (0.94–1.04)
35–44	1.03 (0.97–1.10)
45–54	0.99 (0.92–1.07)
55–64	0.96 (0.88–1.04)
≥65	0.85 (0.75–0.96)
<b>Healthy Places Index quartile§</b>	
1 (least healthy)	0.95 (0.89–1.03)

2	0.93 (0.87–1.00)
3	0.97 (0.91–1.03)
4 (healthiest)	0.98 (0.93–1.03)
Unknown	NA

**Abbreviations:** NH = non-Hispanic; NA = not applicable

\*Odds ratios were calculated by comparing the percent of persons who completed the vaccine series by those whose first dose of JYNNEOS vaccine was administered subcutaneously compared to those whose first dose was administered intradermally. An odds ratio (and corresponding confidence interval) below 1 means there were lower odds of completing the vaccine series when the first dose was administered subcutaneously.

†Data submitted to California Immunization Registry do not include sexual orientation or gender identity information and are generally based on the sex or gender entered at the time of the person’s first dose of any vaccine; however, some records have been updated to reflect a person’s gender identity as being “other” or “nonbinary.”

§ Healthy Places Index quartiles are based on data from 25 identified key drivers of health and life expectancy at birth. Each county and zip code is assigned to a quartile based on these 25 measures, ranked from 1 (least healthy) to 4 (healthiest). <https://map.healthyplacesindex.org>
