

Influenza (Flu) (</flu/index.htm>)

Weekly U.S. Influenza Surveillance Report

Updated September 15, 2023

FLUVIEW
A Weekly Influenza Surveillance Report Prepared by the Influenza Division

2022-2023 Influenza Season
Week 36 ending September 9, 2023

All data in this report are preliminary and may change as more reports are received.

A description of the CDC influenza surveillance system, including methodology and detailed descriptions of each data component, is available on the [surveillance methods](http://www.cdc.gov/flu/weekly/overview.htm) (<http://www.cdc.gov/flu/weekly/overview.htm>) page.

Additional information on the current and previous influenza seasons for each surveillance component is available on [FluView Interactive](https://www.cdc.gov/flu/weekly/fluviewinteractive.htm) (<https://www.cdc.gov/flu/weekly/fluviewinteractive.htm>).

U.S. Virologic Surveillance

(<https://www.cdc.gov/flu/weekly/overview.htm#LabSurveillance>)

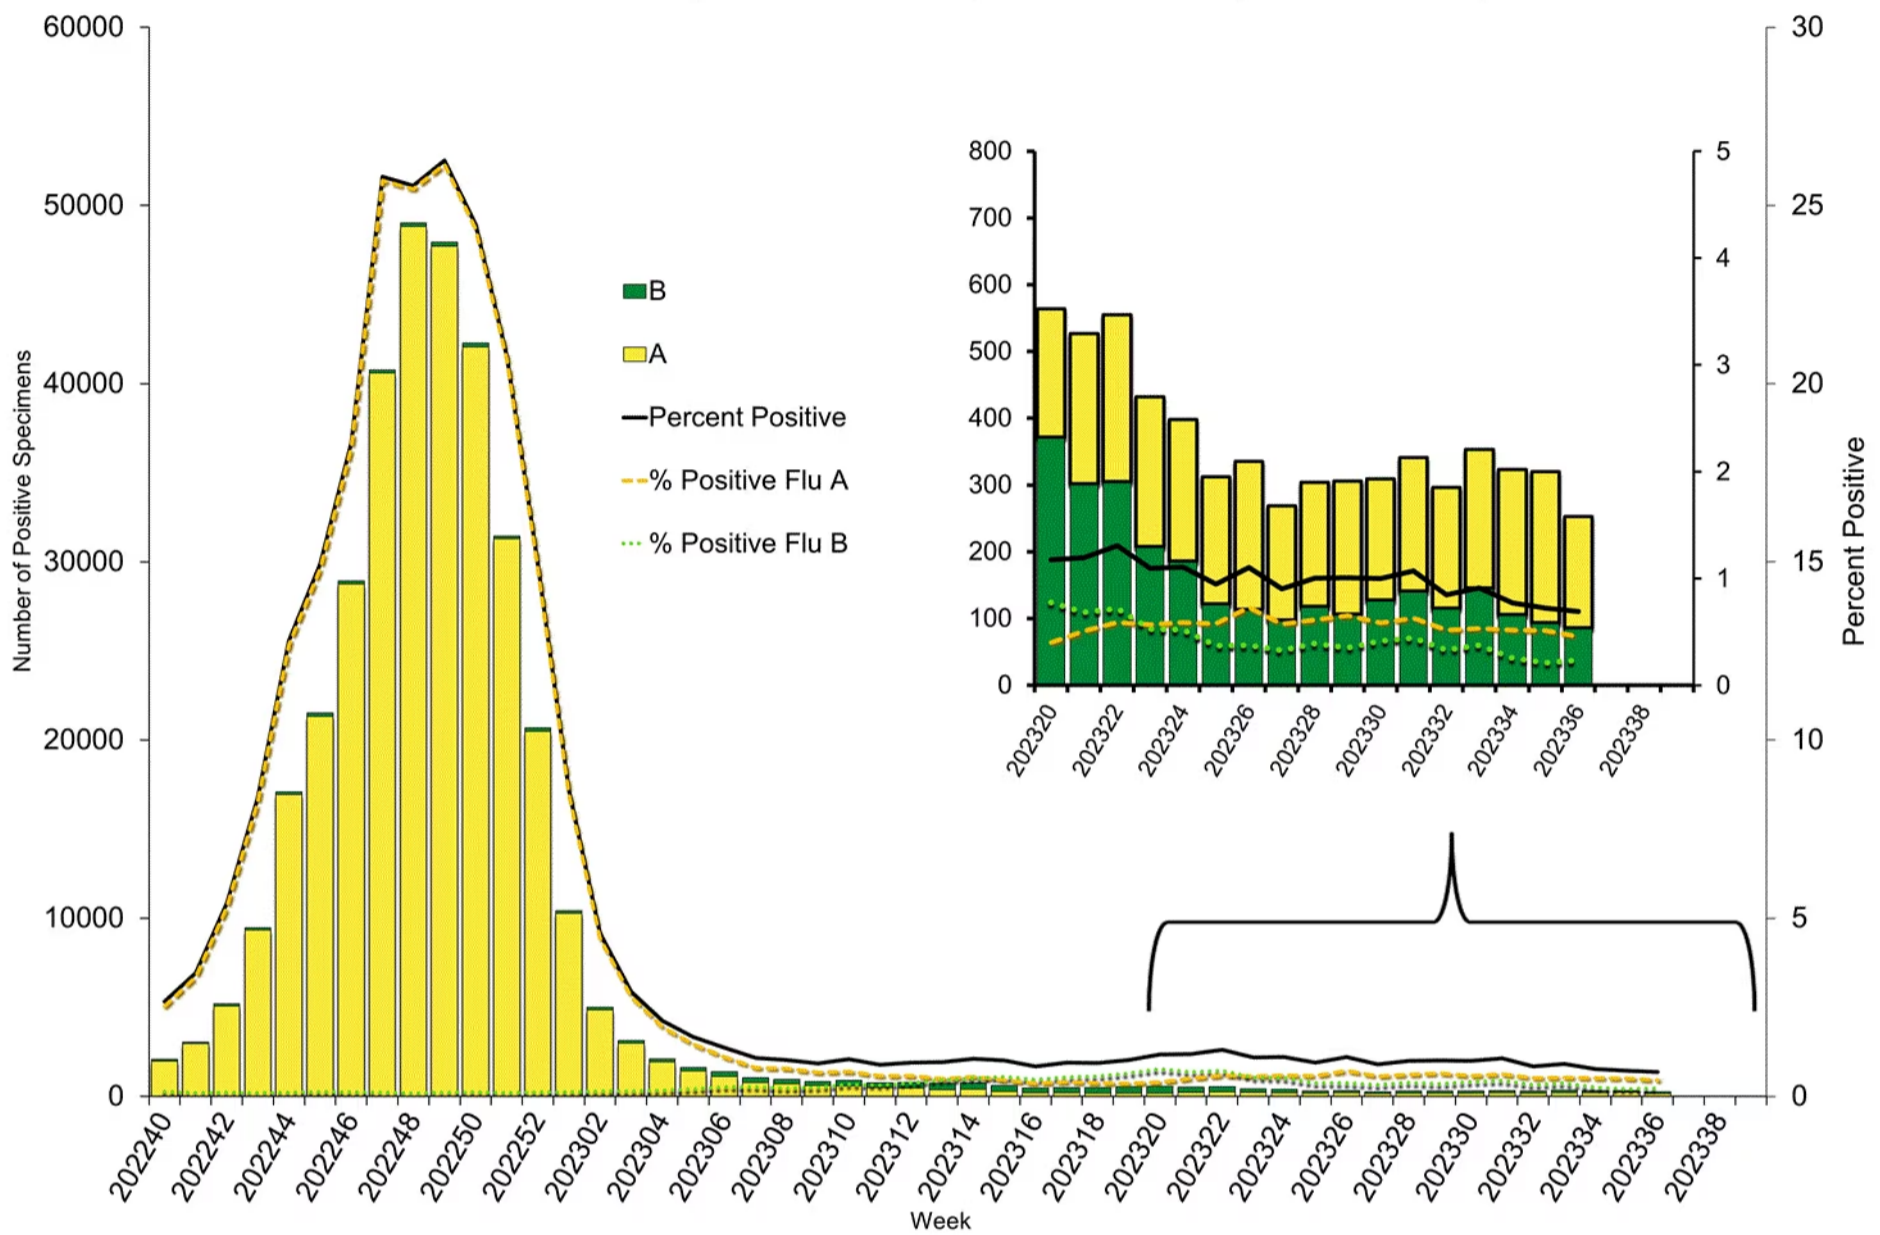

Clinical Laboratories

The results of tests performed by clinical laboratories nationwide are summarized below. Data from clinical laboratories (the percentage of specimens tested that are positive for influenza) are used to monitor whether influenza activity is increasing or decreasing.

| | Week 36 | Data Cumulative since October 2, 2022 (Week 40) |
|-----------------------------------|-------------|--|
| No. of specimens tested | 36,600 | 4,023,390 |
| No. of positive specimens (%) | 253 (0.7%) | 358,781 (8.9%) |
| <i>Positive specimens by type</i> | | |
| Influenza A | 167 (66.0%) | 349,050 (97.3%) |

| | | |
|-------------|------------|--|
| | Week 36 | Data Cumulative since October 2, 2022 (Week 40) |
| Influenza B | 86 (34.0%) | 9,731 (2.7%) |

Influenza Positive Tests Reported to CDC by U.S. Clinical Laboratories, National Summary, October 2, 2022 – September 9, 2023

[View Chart Data \(/flu/weekly/weeklyarchives2022-2023/data/whoAllregt_cl36.html\)](/flu/weekly/weeklyarchives2022-2023/data/whoAllregt_cl36.html) | [View Full Screen \(/flu/weekly/WeeklyArchives2022-2023/WHONPHL36.html\)](/flu/weekly/WeeklyArchives2022-2023/WHONPHL36.html)

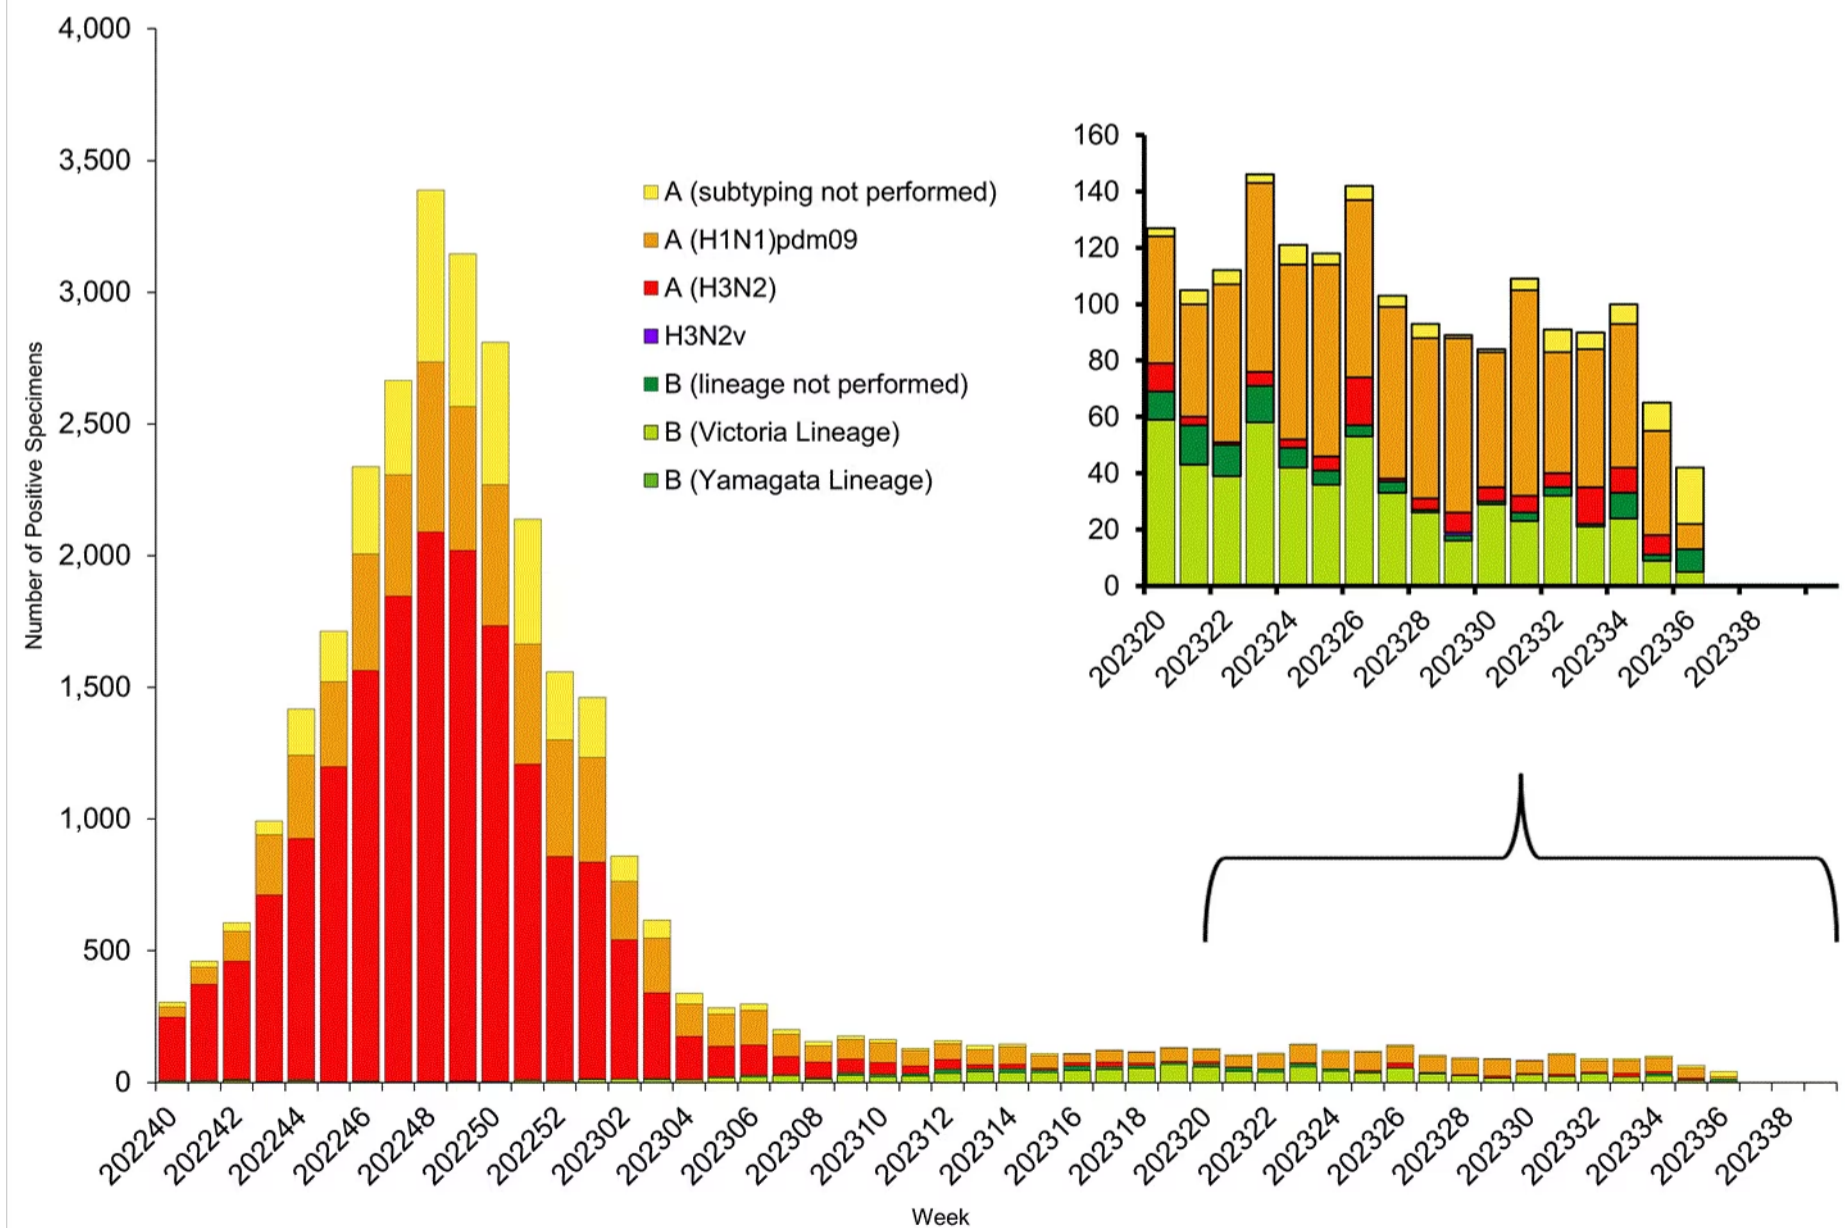

Public Health Laboratories

The results of tests performed by public health laboratories nationwide are summarized below. Data from public health laboratories are used to monitor the proportion of circulating viruses that belong to each influenza virus type/subtype/lineage. Viruses known to be associated with recent live attenuated influenza vaccine (LAIV) receipt or found upon further testing to be a vaccine virus are not included as they are not circulating influenza viruses.

| | Week 36 | Data Cumulative since October 2, 2022 (Week 40) |
|---|---------|--|
| No. of specimens tested | 1,981 | 283,440 |
| No. of positive specimens | 42 | 30,993 |
| <i>Positive specimens by type/subtype</i> | | |

| | Week 36 | Data Cumulative since October 2, 2022 (Week 40) |
|-------------------------|----------|---|
| Influenza A | | |
| (H1N1)pdm09 | 9 (100%) | 7,465 (29.7%) |
| H3N2 | 0 (0%) | 17,695 (70.3%) |
| H3N2v | 0 | 2 (<0.1%) |
| Subtyping not performed | 20 | 4,390 |
| Influenza B | | |
| Yamagata lineage | 0 (0%) | 0 |
| Victoria lineage | 5 (100%) | 1,168 (100%) |
| Lineage not performed | 8 | 273 |

Influenza Positive Tests Reported to CDC by U.S. Public Health Laboratories, National Summary, October 2, 2022 – September 9, 2023

<http://gis.cdc.gov/grasp/fluview/fluportaldashboard.html>

Additional virologic surveillance information for current and past seasons:

Surveillance Methods (</flu/weekly/overview.htm#LabSurveillance>) | FluView Interactive: National, Regional, and State Data (<http://gis.cdc.gov/grasp/fluview/fluportaldashboard.html>) or Age Data (https://gis.cdc.gov/grasp/fluview/flu_by_age_virus.html)

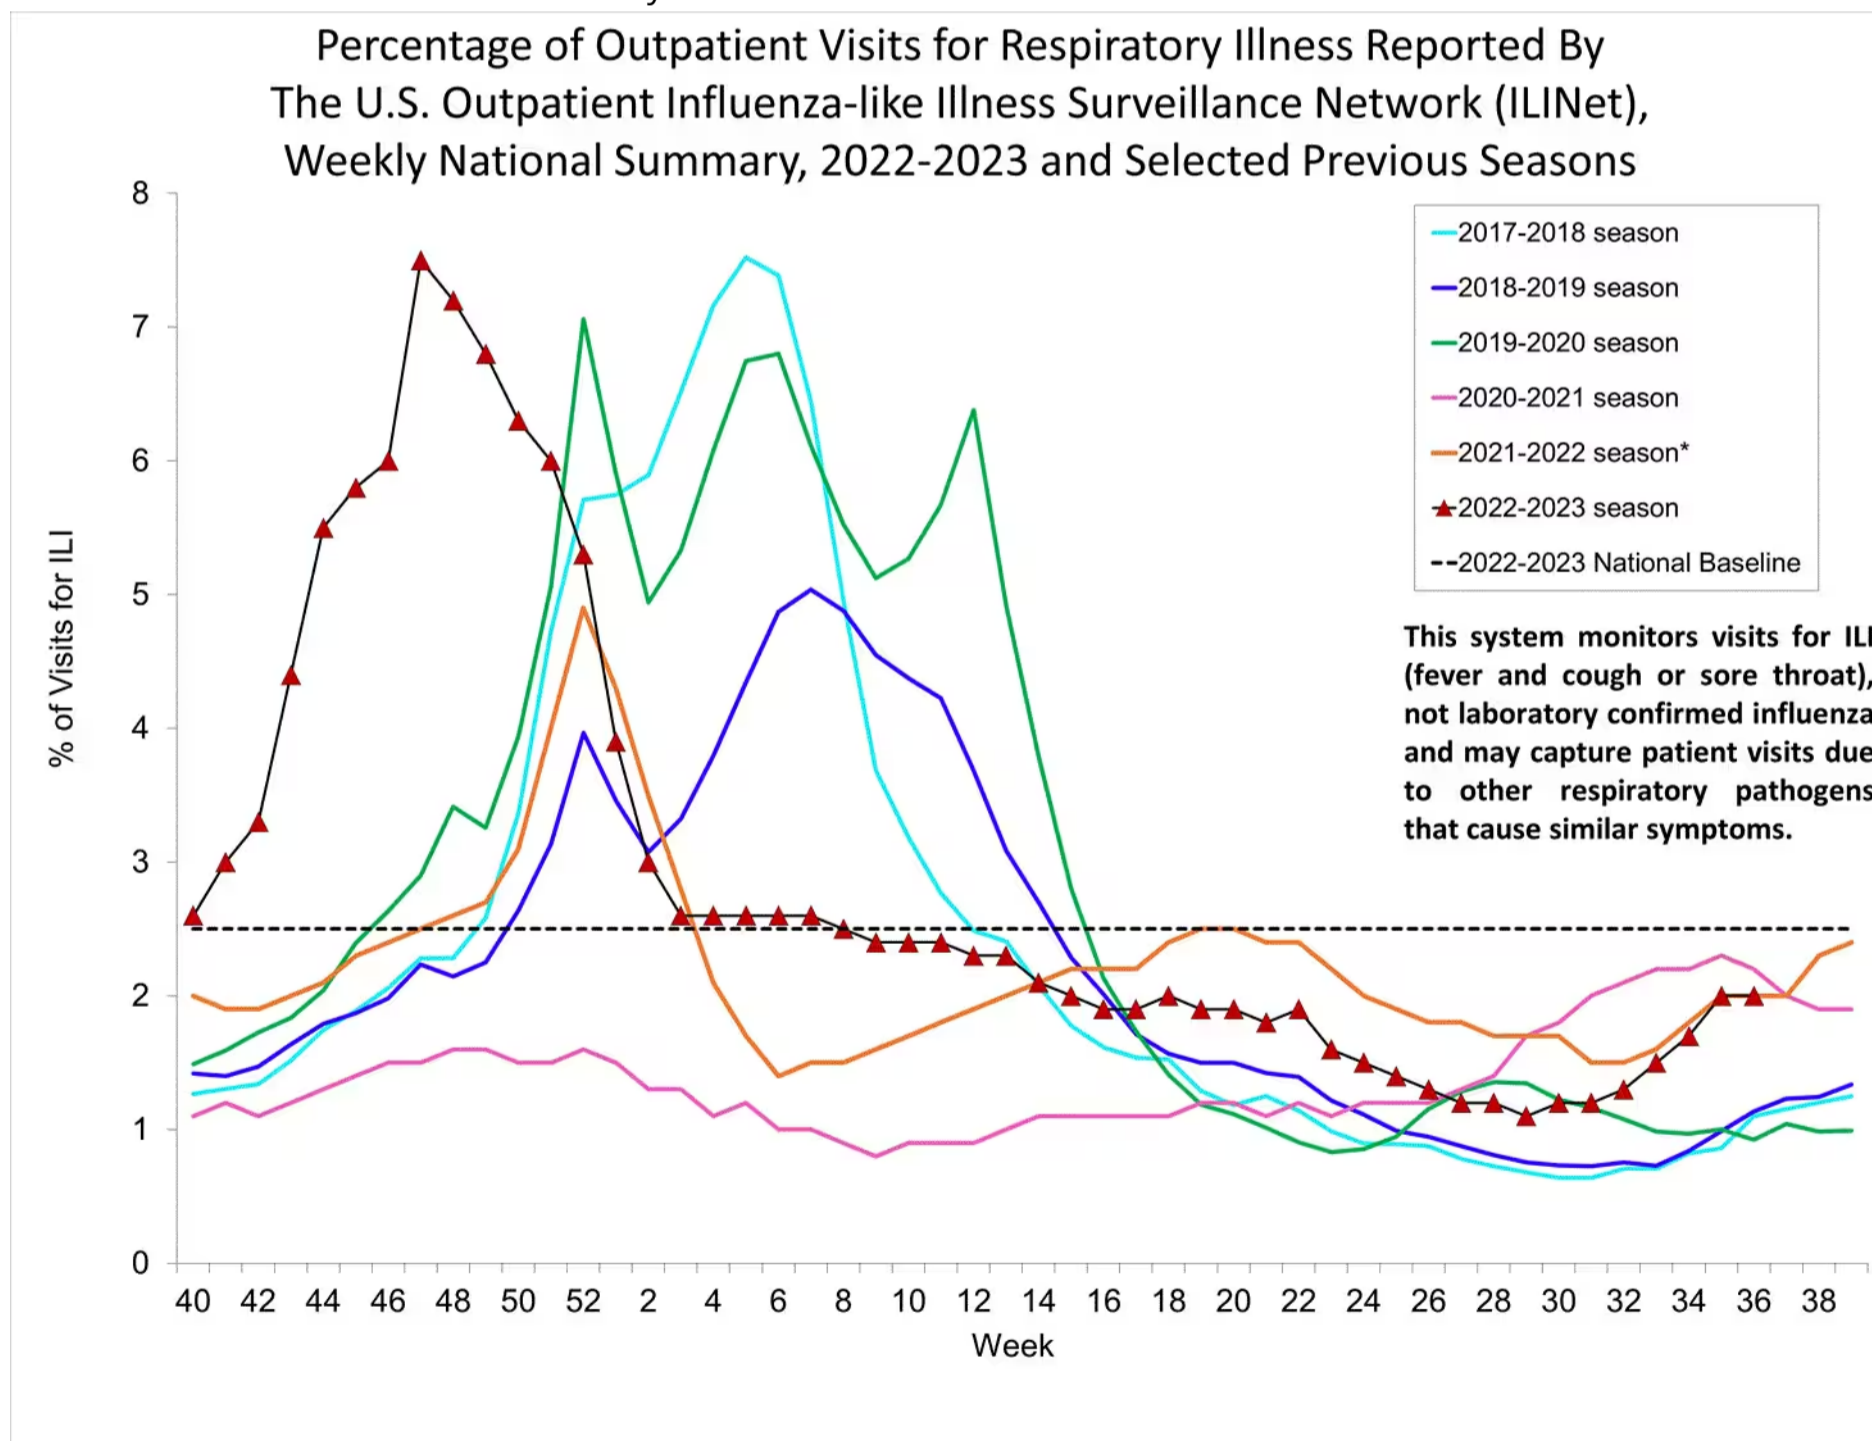

Outpatient Respiratory Illness Surveillance

(<https://www.cdc.gov/flu/weekly/overview.htm#ILINet>)

The U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet) monitors outpatient visits for respiratory illness referred to as influenza-like illness [ILI (fever plus cough or sore throat)], not laboratory-confirmed influenza, and may capture respiratory illness visits due to infection with any pathogen that can present with similar symptoms, including influenza, SARS-CoV-2, and RSV. Therefore, it is important to evaluate syndromic surveillance data, including that from ILINet, in the context of other sources of surveillance data to obtain a complete and accurate picture of influenza, SARS-CoV-2, and other respiratory virus activity. Other respiratory virus surveillance data can be found on CDC's [COVID Data Tracker](https://covid.cdc.gov/covid-data-tracker/#datatracker-home) (<https://covid.cdc.gov/covid-data-tracker/#datatracker-home>), [NCIRD Surveillance Systems website](https://www.cdc.gov/ncird/surveillance/index.html) (<https://www.cdc.gov/ncird/surveillance/index.html>) and [National Respiratory and Enteric Virus Surveillance System \(NREVSS\) website](https://www.cdc.gov/surveillance/nrevss/index.html) (<https://www.cdc.gov/surveillance/nrevss/index.html>).

Outpatient Respiratory Illness Visits

Nationwide during week 36, 2.0% of patient visits reported through ILINet were due to respiratory illness that included fever plus a cough or sore throat, also referred to as ILI. Multiple respiratory viruses are co-circulating, and the relative contribution of influenza virus infection to ILI varies by location.

(<http://gis.cdc.gov/grasp/fluview/fluportaldashboard.html>)

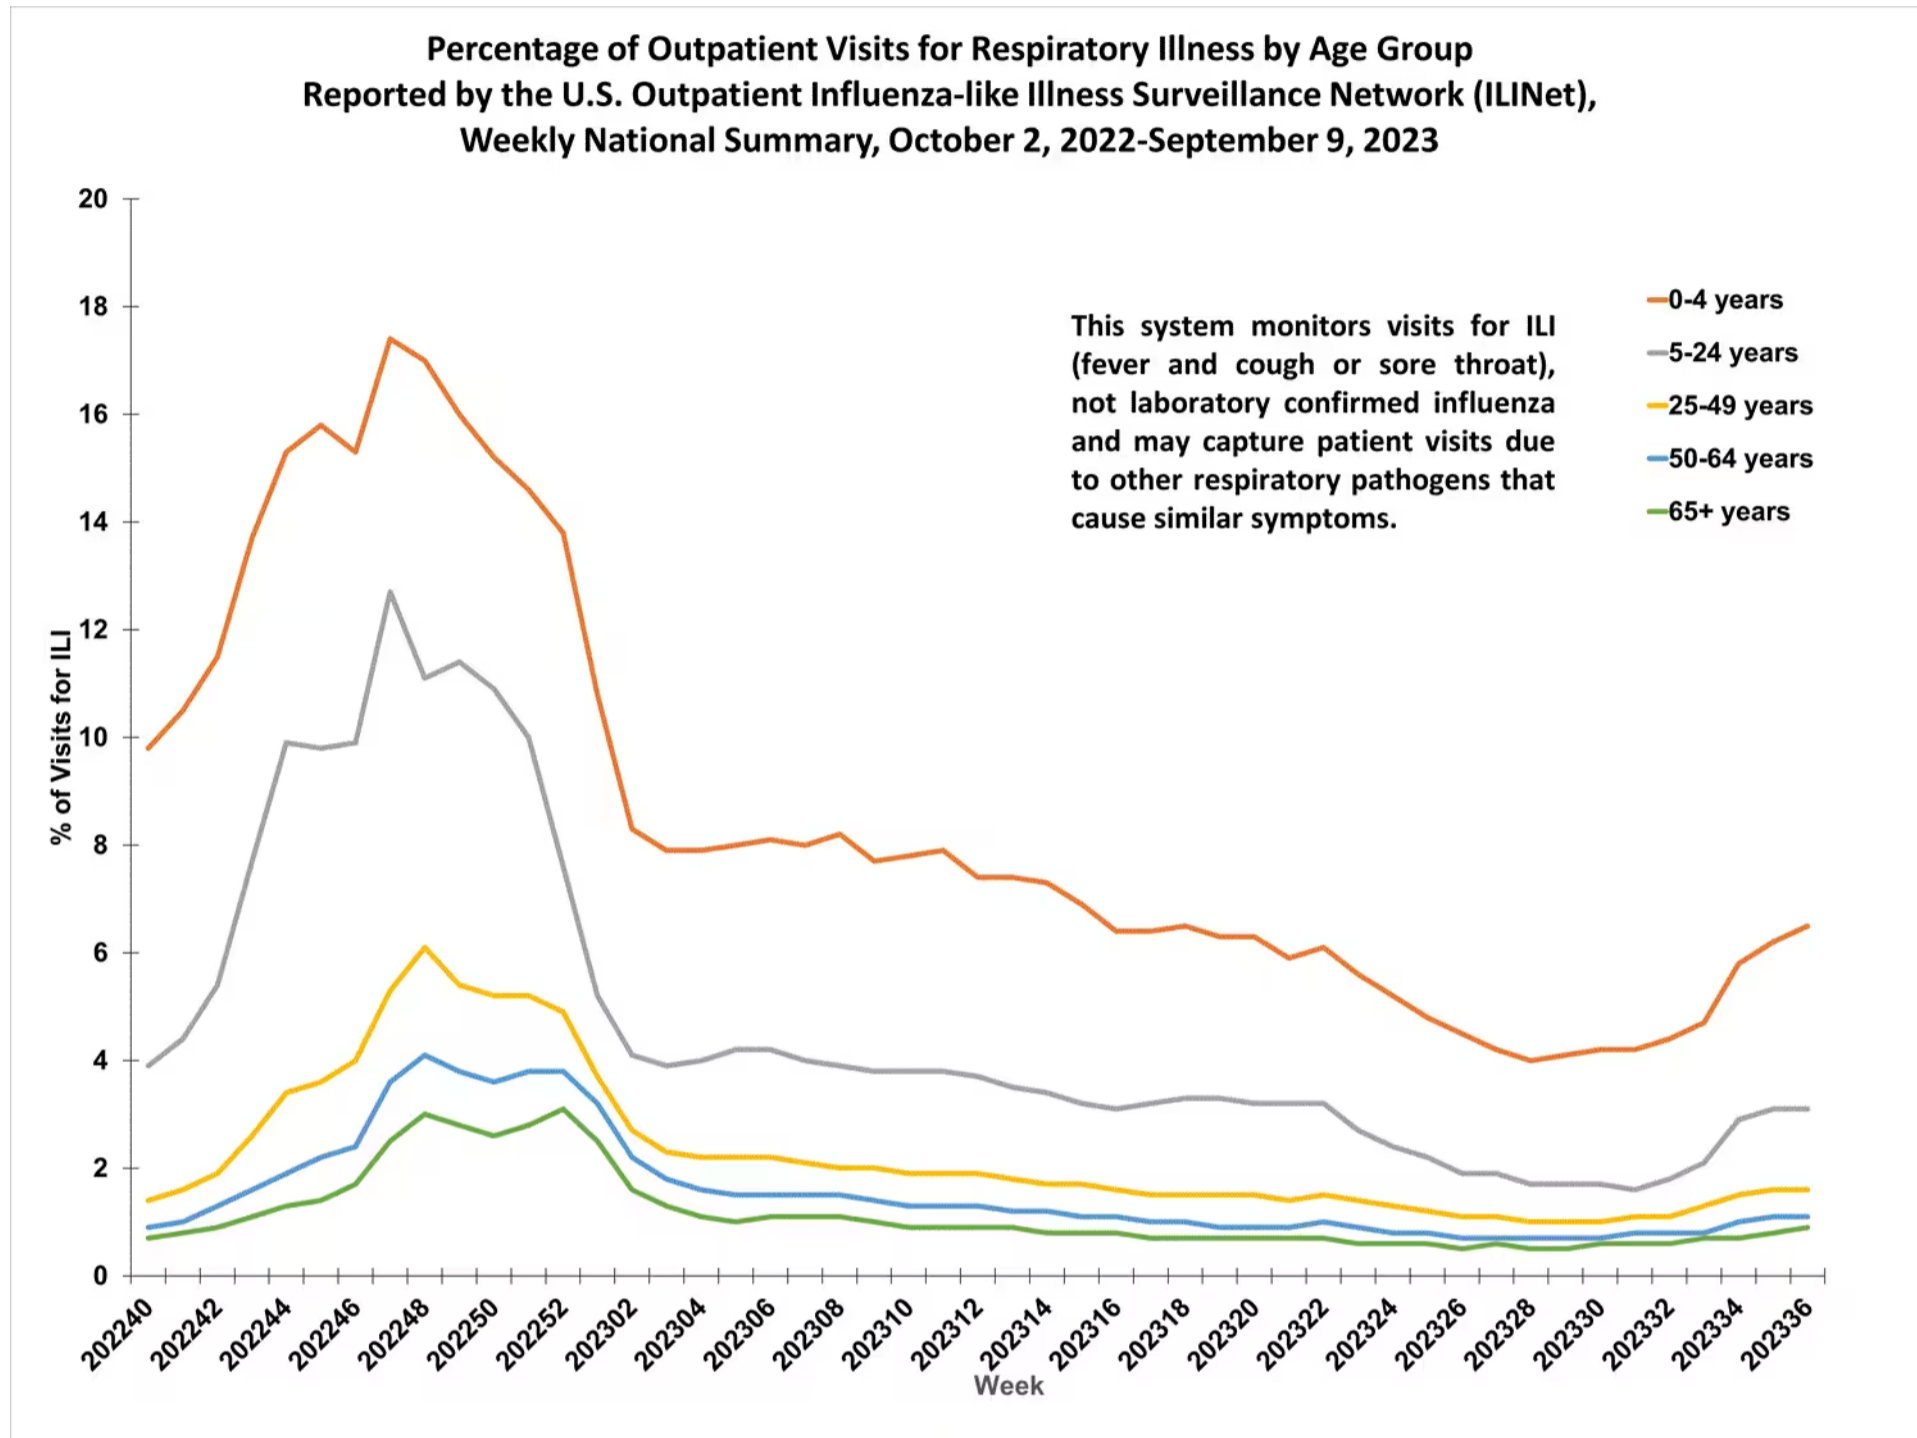

* Effective October 3, 2021 (week 40), the ILI definition (fever plus cough or sore throat) no longer includes "without a known cause other than influenza."

[View Chart Data \(current season only\) \(/flu/weekly/weeklyarchives2022-2023/data/senAllregt36.html\)](/flu/weekly/weeklyarchives2022-2023/data/senAllregt36.html) | [View Full Screen \(/flu/weekly/weeklyarchives2022-2023/ILI36.html\)](#)

Outpatient Respiratory Illness Visits by Age Group

More than 70% of ILINet participants provide both the number of patient visits for respiratory illness and the total number of patient visits for the week broken out by age group. Data from this subset of providers are used to calculate the percentages of patient visits for respiratory illness by age group.

During week 36, the percentage of visits for respiratory illness reported in ILINet was 6.5% among those 0-4 years, 3.1% among those 5-24 years, 1.6% among those 25-49 years, 1.1% among those 50-64 years, and 0.9% among those 65 years and older.

<http://gis.cdc.gov/grasp/fluview/fluportaldashboard.html>

[View Chart Data \(/flu/weekly/weeklyarchives2022-2023/data/iliage36.html\)](/flu/weekly/weeklyarchives2022-2023/data/iliage36.html) | [View Full Screen \(/flu/weekly/weeklyarchives2022-2023/ILIAge36.html\)](/flu/weekly/weeklyarchives2022-2023/ILIAge36.html)

Outpatient Respiratory Illness Activity Map

Data collected in ILINet are used to produce a measure of ILI activity*

https://www.cdc.gov/flu/weekly/overview.htm#anchor_1633697504110 by state/jurisdiction and Core Based Statistical Areas (CBSA).

| Activity Level | Number of Jurisdictions | | Number of CBSAs | |
|----------------|---|---|---|---|
| | Week 36 (Week ending Sept. 9, 2023) | Week 35 (Week ending Sept. 2, 2023) | Week 36 (Week ending Sept. 9, 2023) | Week 35 (Week ending Sept. 2, 2023) |
| Very High | 0 | 0 | 3 | 3 |

| Activity Level | Number of Jurisdictions | | Number of CBSAs | |
|-------------------|---|---|---|---|
| | Week 36 (Week ending Sept. 9, 2023) | Week 35 (Week ending Sept. 2, 2023) | Week 36 (Week ending Sept. 9, 2023) | Week 35 (Week ending Sept. 2, 2023) |
| High | 1 | 0 | 8 | 14 |
| Moderate | 3 | 1 | 25 | 31 |
| Low | 9 | 9 | 82 | 57 |
| Minimal | 42 | 45 | 543 | 569 |
| Insufficient Data | 0 | 0 | 268 | 255 |

A Weekly Influenza Surveillance Report Prepared by the Influenza Division

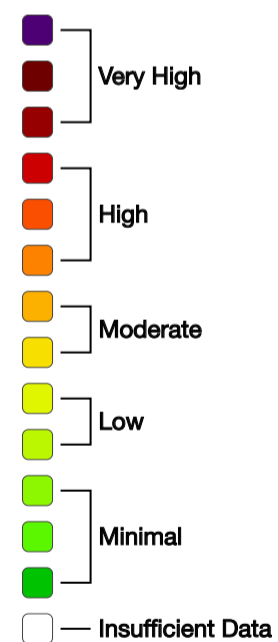

Outpatient Respiratory Illness Activity Map Determined by Data Reported to ILINet

This system monitors visits for respiratory illness that includes fever plus a cough or sore throat, also referred to as ILI, not laboratory confirmed influenza and may capture patient visits due to other respiratory pathogens that cause similar symptoms.

State CBSA

ILI Activity Level

Season: 2022-23 ▲

(<https://www.cdc.gov/flu/weekly/flureport.xml>)View Full Screen (<http://gis.cdc.gov/grasp/fluview/main.html>)

*Data collected in ILINet may disproportionately represent certain populations within a jurisdiction or CBSA, and therefore, may not accurately depict the full picture of influenza activity for the entire jurisdiction or CBSA. Differences in the data presented here by CDC and independently by some health departments likely represent differing levels of data completeness with data presented by the health department likely being the more complete.

Additional information about medically attended visits for ILI for current and past seasons:

Hospitalization Surveillance

(<http://www.cdc.gov/flu/weekly/overview.htm#HospitalizationSurv>)

FluSurv-NET

The Influenza Hospitalization Surveillance Network (FluSurv-NET) conducts population-based surveillance for laboratory-confirmed influenza-related hospitalizations in select counties in 13 states and represents approximately 9% of the U.S. population. FluSurv-NET hospitalization data are preliminary. Patients admitted for laboratory-confirmed influenza-related hospitalization after April 30, 2023, will not be included in FluSurv-NET for the 2022-2023 season. Data on patients admitted through April 30, 2023, will continue to be updated on FluView Interactive as additional information is received.

Additional FluSurv-NET hospitalization surveillance information for current and past seasons and additional age groups:

HHS Protect Hospitalization Surveillance

Hospitals report to HHS Protect the number of patients admitted with laboratory-confirmed influenza. During week 36, 775 patients with laboratory-confirmed influenza were admitted to a hospital.

New Influenza Hospital Admissions Reported to HHS Protect, National Summary, October 2, 2022 – September 9, 2023

Additional HHS Protect hospitalization surveillance information:

Mortality Surveillance

(<https://www.cdc.gov/flu/weekly/overview.htm#MortalitySurveillance>)

National Center for Health Statistics (NCHS) Mortality Surveillance

Based on NCHS mortality surveillance data available on September 14, 2023, 7.0% of the deaths that occurred during the week ending September 9, 2023 (week 36), were due to pneumonia, influenza, and/or COVID-19 (PIC). This percentage is above the epidemic threshold of 5.6% for this week. Among the 1,548 PIC deaths reported for this week, 507 had COVID-19 listed as an underlying or contributing cause of death on the death certificate, and 12 listed influenza. The data presented are preliminary and may change as more data are received and processed.

Influenza-Associated Pediatric Mortality

No influenza-associated pediatric deaths were reported to CDC during week 36.

A total of 174 influenza-associated pediatric deaths occurring during the 2022-2023 season have been reported to CDC.

<http://gis.cdc.gov/GRASP/Fluview/PedFluDeath.html>
