COVID-NET Laboratory-confirmed COVID-19 hospitalizations

COVID-NET is a population-based surveillance system that collects data on laboratory-confirmed COVID-19-associated hospitalizations among children and adults. The current network is comprised of over 300 acute-care hospitals in 13 states. Hospitalization rates are updated weekly. COVID-NET also provides important clinical information on COVID-19-associated hospitalizations, including age group, sex, race/ethnicity, and underlying health conditions.

For more information about COVID-NET, please see <https://www.cdc.gov/coronavirus/2019-ncov/covid-data/covid-net/purpose-methods.html>

[< HOME COVID-19](#)

Updated Sept. 22, 2023 [Español](#) [Print](#)

The [Coronavirus Disease 2019 \(COVID-19\)-Associated Hospitalization Surveillance Network \(COVID-NET\)](#) conducts active, population-based surveillance for laboratory-confirmed COVID-19-associated hospitalizations in children younger than 18 years of age and adults. The network currently includes 98 counties in 13 states that participate in the [Emerging Infections Program](#) (California, Colorado, Connecticut, Georgia, Maryland, Minnesota, New Mexico, New York, Oregon, and Tennessee) or the [Influenza Hospitalization Surveillance Program](#) (Michigan, Ohio, and Utah). COVID-NET covers approximately 10% of the U.S. population, or around 32 million people.

The rates presented on the COVID-NET interactive dashboard can be used to follow trends and comparisons of COVID-19-associated hospitalizations in different demographic groups and over time.

COVID-NET hospitalization data are preliminary and subject to change as more data become available. All data are subject to reporting lags that might increase around holidays or during periods of increased hospital utilization. As new data are received each week, previous case counts and rates are updated accordingly.
