

SUPPLEMENTARY FIGURE. Influenza-associated deaths* among children aged <5 years (A) and 5–17 years (B) — United States, 2016–17 through 2022–23[†] influenza seasons[§]

* With 95% credible intervals shown with error bars

[†] No deaths in children aged <18 years were observed through the Influenza Hospital Surveillance Network (FluSurv-NET) during the 2021–22 influenza season. As a result, it was not possible to estimate deaths in this age group.

[§] Excluding 2020–2021.
