

# CDC Recognizes World Water Day

Worldwide, **780 million** people do not have access to an improved water source.

= 100 million people

40%

Diarrheal diseases can account for up to 40% of deaths in acute emergency settings

21%

Improved water sources can reduce diarrhea deaths by up to 21%

## HAITI

To address cholera, CDC helps ensure trucked and municipal water sources are chlorinated and routinely monitored

## ETHIOPIA

CDC responded to an outbreak of acute watery diarrhea and helped with the chlorination of drinking water supplies and improvement of water quality monitoring

## MOZAMBIQUE

After the country was struck by two devastating cyclones in April of 2019, CDC responded to waterborne disease outbreaks by creating a mobile phone based water quality monitoring system to monitor daily free residual chlorine (FRC) levels in the piped water network.

## ZIMBABWE

CDC responded quickly following a confirmed cholera outbreak in 2018. After collecting measures of water quality, WASH experts recommended boosting chlorine levels in highly affected areas.
