

Respiratory Viruses

Groups Most Impacted—Emergency Department Visits

Provides an update on which groups are currently most affected by illness from COVID-19, influenza, and RSV.

Groups Most Impacted Update:

- The percentage of all emergency department visits with a discharge diagnosis of COVID is highest among adults 65+; visits due to RSV are highest among children under 4 years; influenza visits are highest among school aged children (5-17 years).
- Rates of COVID-19-associated hospitalizations are elevated for infants and young children and highest among older adults. RSV-associated hospitalization rates are elevated among children under 4 years and are increasing among adults 65+. Rates of influenza-associated hospitalizations are low but increasing and adults 65+ have the highest rate.
- Nationally, the percent of deaths due to respiratory viruses (COVID-19, influenza, and RSV combined) is highest among adults 65+.

Reported on Friday, December 8th, 2023.

Emergency Department Visits for Viral Respiratory Illness, by Age

Weekly percent of total emergency department visits associated with COVID-19, influenza, and RSV.
