CI, confidence interval; NAICS, North American Industry Classification System; n.e.c., not elsewhere classified.

\* Among participants who had had an influenza vaccination within the previous 12 months.

\*\* California, Delaware, Florida, Georgia, Hawaii, Idaho, Illinois, Kansas, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, New Hampshire, New Jersey, New Mexico, New York, North Carolina, North Dakota, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Washington, and Wisconsin.

\*\*\* Weighted to the state populations of the 30 states.

\*\*\*\* "Workplace" may have been underreported because some workers who work in doctors' offices, clinics, stores, hospitals, or other specified workplaces may have reported those options rather than the option "workplace."

US Census codes: <https://www.census.gov/topics/employment/indestry-occupation/guidance/code-lists.html>

NAICS codes: <https://www.census.gov/business/indestry-occupation/guidance/code-lists.html>

Note: Industry codes are hierarchical, so they can be grouped at different levels of detail. Each participant's industry text response was coded to an individual US Census code. Census industry codes can be cross-walked to NAICS codes. This table presents both Census and NAICS codes. The blue rows are the broadest grouping of codes, and subsumed under them are the industries in the gray and white rows. The gray rows are narrower groups of industries than blue rows. The industries in the white rows are individual Census codes and are the most detailed; they are subsumed within the gray or blue rows above them.

Note: Reporting is limited to estimates with a relative standard error (RSE) <= 30% and an unweighted denominator >= 50. This restriction is why some industry rows are not included in this table and why some cells are blank.

Note: Prevalence estimates highlighted in yellow are significantly higher than the prevalence estimate for all workers; significance is defined as nonoverlapping 95% CIs.

Note: Prevalence estimates highlighted in red are significantly lower than the prevalence estimate for all workers; significance is defined as nonoverlapping 95% CIs.
