# Forecasts of Flu Hospital Admissions

Updated January 26, 2024

## Reported and forecasted new influenza hospital admissions as of January 24, 2024.

### Interpretation of Forecasts of New Hospital Admissions

- This week's ensemble predicts that the number of new weekly laboratory confirmed influenza hospital admissions will likely decrease nationally, with **2,900 to 15,000** laboratory confirmed influenza hospital admissions likely reported in the week ending February 10, 2024.
- This week, 25 modeling groups contributed 30 forecasts that were eligible for inclusion in the ensemble forecasts for at least one jurisdiction. Contributing teams are listed below.
- Ensemble forecasts combine forecasts from diverse models into one forecast. They have been among the most reliable forecasts in performance for previous influenza and COVID-19 forecasting efforts, but even the ensemble forecasts may not reliably predict rapid changes.
- The figure shows the number of new laboratory confirmed influenza hospital admissions reported in the United States each week from September 1 through January 20 and forecasted new influenza hospital admissions per week for this week and the next 2 weeks, through February 10. Hospitals are required to report daily laboratory-confirmed influenza hospitalizations to HHS Protect. [See COVID-19 Guidance for Hospital Reporting and FAQs](#)  [658 KB, 52 pages] [↗](#) for additional details on this guidance.

## State Forecasts

State-level forecasts show the predicted number of new laboratory confirmed influenza hospital admissions per week for this week and the next 2 weeks by state. Each state forecast figure uses a different scale due to differences in the number of new influenza hospital admissions per week between states and only forecasts included in the ensemble are shown. Plots of the state-level ensemble forecasts and the underlying data can be downloaded below.
