

Seasonal Influenza (Flu)

Error processing SSI file

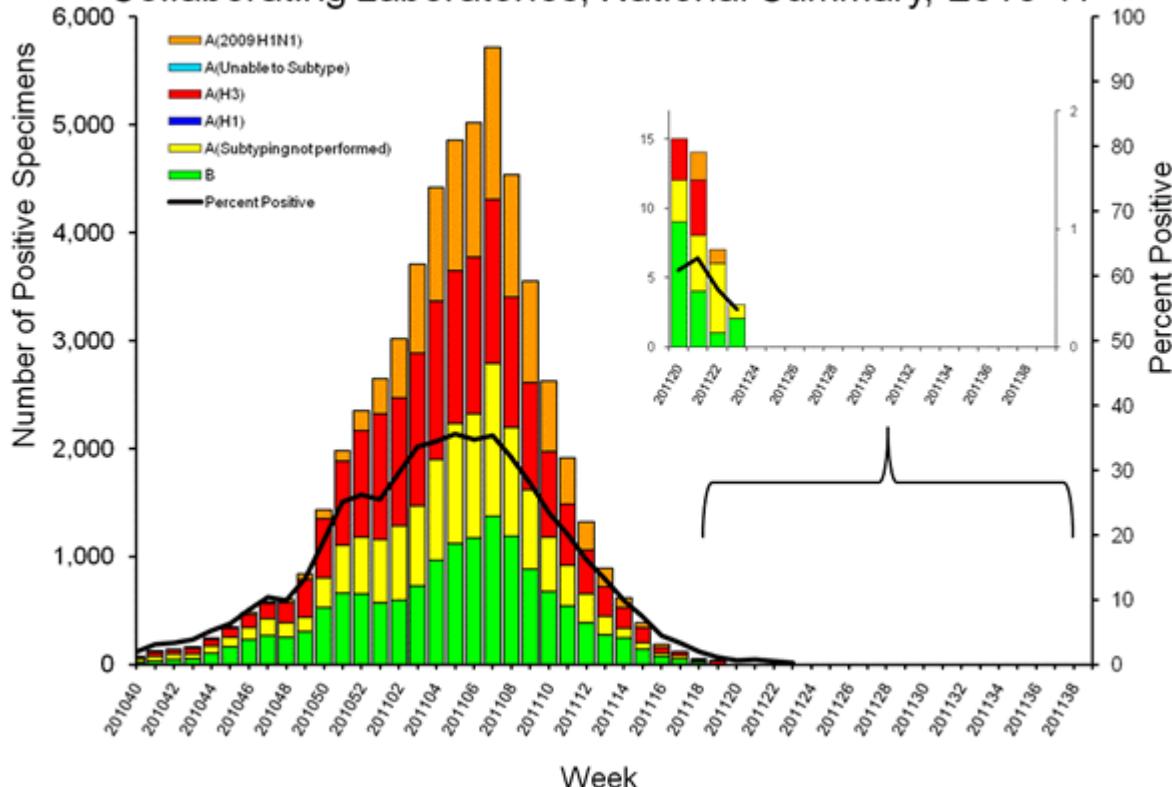

2010-2011 Influenza Season Week 23 ending June 11, 2011

All data are preliminary and may change as more reports are received.

U.S. Virologic Surveillance:

WHO and NREVSS collaborating laboratories located in all 50 states and Washington, D.C. report to CDC the number of respiratory specimens tested for influenza and the number positive by influenza type and subtype.

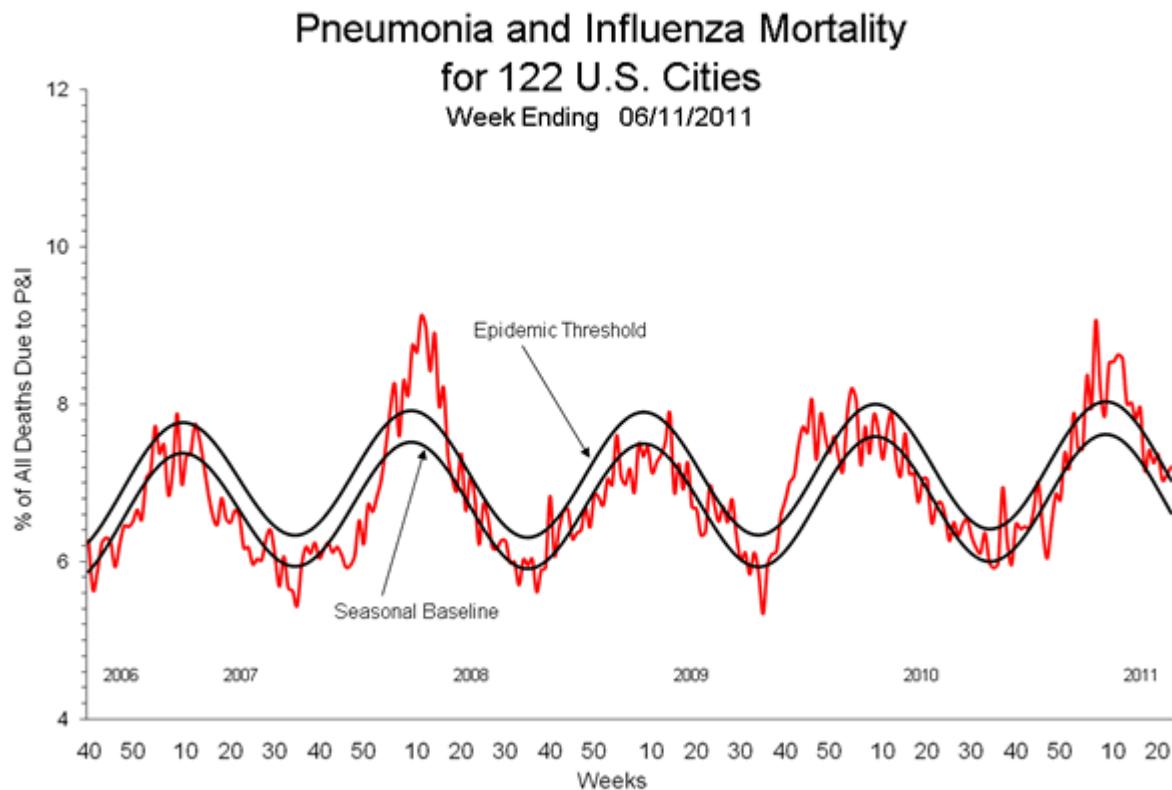

Influenza Positive Tests Reported to CDC by U.S. WHO/NREVSS Collaborating Laboratories, National Summary, 2010-11

Influenza-Associated Pediatric Mortality

Two influenza-associated pediatric deaths were reported to CDC during week 23. Both of these deaths were associated with a 2009 influenza A (H1N1) virus.

This season, 108 laboratory-confirmed influenza-associated pediatric deaths from 33 states, Chicago, and New York City have been reported. Forty-one of the 108 deaths reported were associated with influenza B viruses; 29 were associated with 2009 influenza A (H1N1) viruses; 18 deaths reported were associated with influenza A (H3N2) viruses, and 20 were associated with an influenza A virus for which the subtype was not determined.

Number of Influenza-Associated Pediatric Deaths by Week of Death: 2007-08 season to present
