

Respiratory Illnesses

Groups Most Impacted—Emergency Department Visits

Provides an update on which groups are currently most affected by illness from COVID-19, influenza, and RSV.

Groups Most Impacted Update:

- As a percent of all emergency department visits, children under 18 have the highest proportion of diagnosed influenza visits. Influenza visits decreased or remained stable in all age groups. COVID-19-related emergency department visits are highest among infants under 12 months and adults 65+; visits due to diagnosed RSV are highest among infants under 12 months.
- Rates of influenza-related hospitalizations are elevated in all age groups; adults 65+ have the highest rate compared to other age groups. Non-Hispanic American Indian/Alaska Native and Non-Hispanic Black persons have the highest age-adjusted influenza hospitalization rate compared with other racial and ethnic groups. Rates of COVID-19 and RSV hospitalizations are decreasing but remain elevated among adults 65+ and infants under 12 months.
- Nationally, the percent of total deaths due to COVID-19, influenza, or RSV were highest (4.2%) among adults 65+.

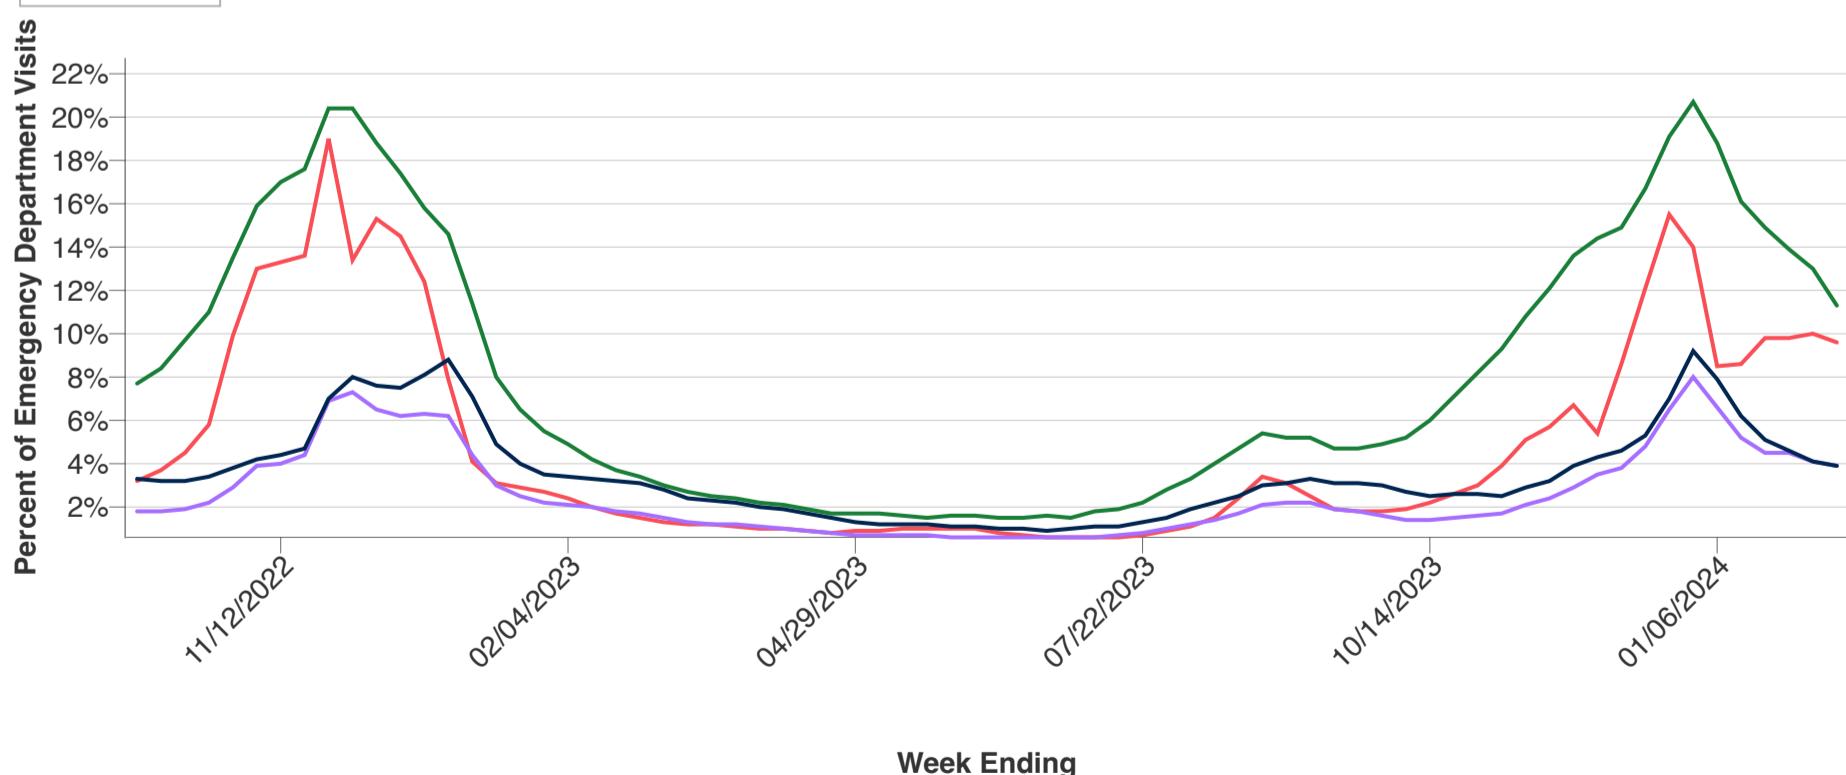

Reported on Friday, February 16th, 2024.

Emergency Department Visits for Viral Respiratory Illness, by Age

Weekly percent of total emergency department visits associated with COVID-19, influenza, and RSV.
