

# Respiratory Illnesses

# Groups Most Impacted—Emergency Department Visits

Provides an update on which groups are currently most affected by illness from COVID-19, influenza, and RSV.

### **Groups Most Impacted Update:**

- As a percent of all emergency department visits, children under 18 have the highest proportion of diagnosed influenza visits. Influenza visits decreased in all age groups. COVID-19-related emergency department visits are highest among infants under 12 months and adults 65+ and decreasing among all age groups; visits due to diagnosed RSV are highest among infants under 12 months but decreasing or stable among all age groups.
- Rates of influenza-related hospitalizations are elevated in all age groups; adults 65+ have the highest rate compared to other age groups. Non-Hispanic Black persons have the highest age-adjusted influenza hospitalization rate compared with other racial and ethnic groups. Rates of COVID-19 and RSV hospitalizations are decreasing but remain elevated among adults 65+ and infants under 12 months.
- Nationally, the percent of total deaths due to COVID-19, influenza, or RSV were highest (2.8%) among adults 65+.

Reported on Friday, March 22nd, 2024.

# Emergency Department Visits for Viral Respiratory Illness, by Age

Weekly percent of total emergency department visits associated with COVID-19, influenza, and RSV.
