

Respiratory Illnesses

Respiratory Virus Data Channel Weekly Snapshot

Provides a summary of the key viral respiratory illness findings for COVID-19, influenza, and RSV from the past week and access to additional information and figures.

Note: data summaries are based on CDC subject matter expert interpretation of publicly available findings across multiple data systems, some of which are not included in the data visualizations on these web pages.

The amount of respiratory illness (fever plus cough or sore throat) causing people to seek healthcare continues to decrease across most areas of the country. This week, 1 jurisdiction experienced high activity (0 were very high) compared to 6 jurisdictions experiencing high activity (0 very high) the previous week.

Reported on Friday, April 12th, 2024.

Summary

Seasonal influenza activity remains elevated but continues to decrease. COVID-19 activity is decreasing in most areas of the country. RSV activity is decreasing in all areas of the country. Hospital bed occupancy for all patients, including within ICUs, remains stable nationally.

Influenza

Nationally, seasonal influenza activity remains elevated but is continuing to decrease. Additional information about current influenza activity can be found at: [Weekly U.S. Influenza Surveillance Report | CDC](#).

COVID-19

Most key indicators, including [wastewater viral activity](#), are showing decreasing levels of activity nationally.

RSV

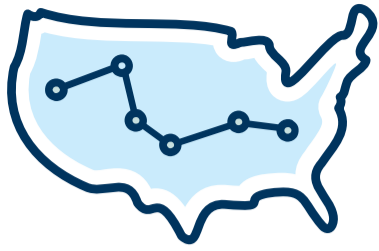

Decreases in RSV activity have been observed in all areas of the country. Nine of ten regions are below the [3% percent positivity epidemic threshold](#) indicating that the RSV season is ending in those areas. Hospitalization rates are decreasing in all age groups.

Vaccination

National vaccination coverage for COVID-19, influenza, and RSV vaccines [remained low for children and adults](#) for the 2023-24 respiratory illness season. [COVID-19 vaccines continue to be recommended](#) and can provide a layer of protection.

Activity Levels

Provides an update on how COVID-19, influenza, and RSV may be spreading nationally and in your state.

[Activity Level >](#)

Illness Severity

Provides an update on how respiratory viruses are contributing to serious health outcomes, like hospitalizations and deaths, both nationally and in your state.

[Illness Severity >](#)

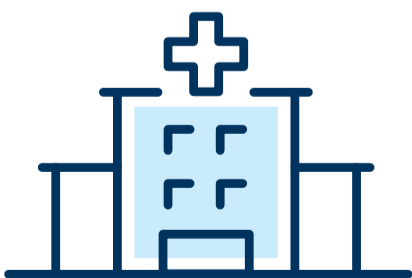

Groups Most Impacted

Provides an update on how COVID-19, influenza, and RSV illness, hospitalizations, and deaths are affecting different groups.

[Emergency Department Visits >](#)

[Hospitalizations >](#)

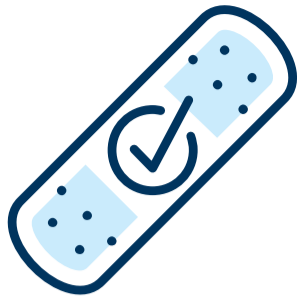

[Deaths >](#)

Hospital Occupancy

Provides an update on current overall hospital occupancy levels and how patients hospitalized with COVID-19 or influenza are contributing to inpatient and intensive care unit bed use.

[Hospital Occupancy >](#)

Vaccination Trends

Provides an update on receipt of vaccination and intent for vaccination for COVID-19 (children and adults), influenza (children and adults), and RSV (adults) based on weekly updated National Immunization Survey (NIS) survey responses.

[Vaccination Trends—Children >](#)

[Vaccination Trends—Adults >](#)

Explore deeper data

Wastewater

Wastewater (sewage) data specific to SARS-CoV-2, the virus that causes COVID-19, are displayed at the national, regional, and state levels. These data can provide an early signal of changes in infection levels.

Nursing Homes

Data on COVID-19 cases and deaths among residents and staff of nursing homes are displayed at the national and state levels.

Forward Outlook

Estimated trends for COVID-19 and influenza infections and hospitalizations, based on modeling and forecasting, are displayed at the national and state levels.
