

**FLUO  
census  
1966**

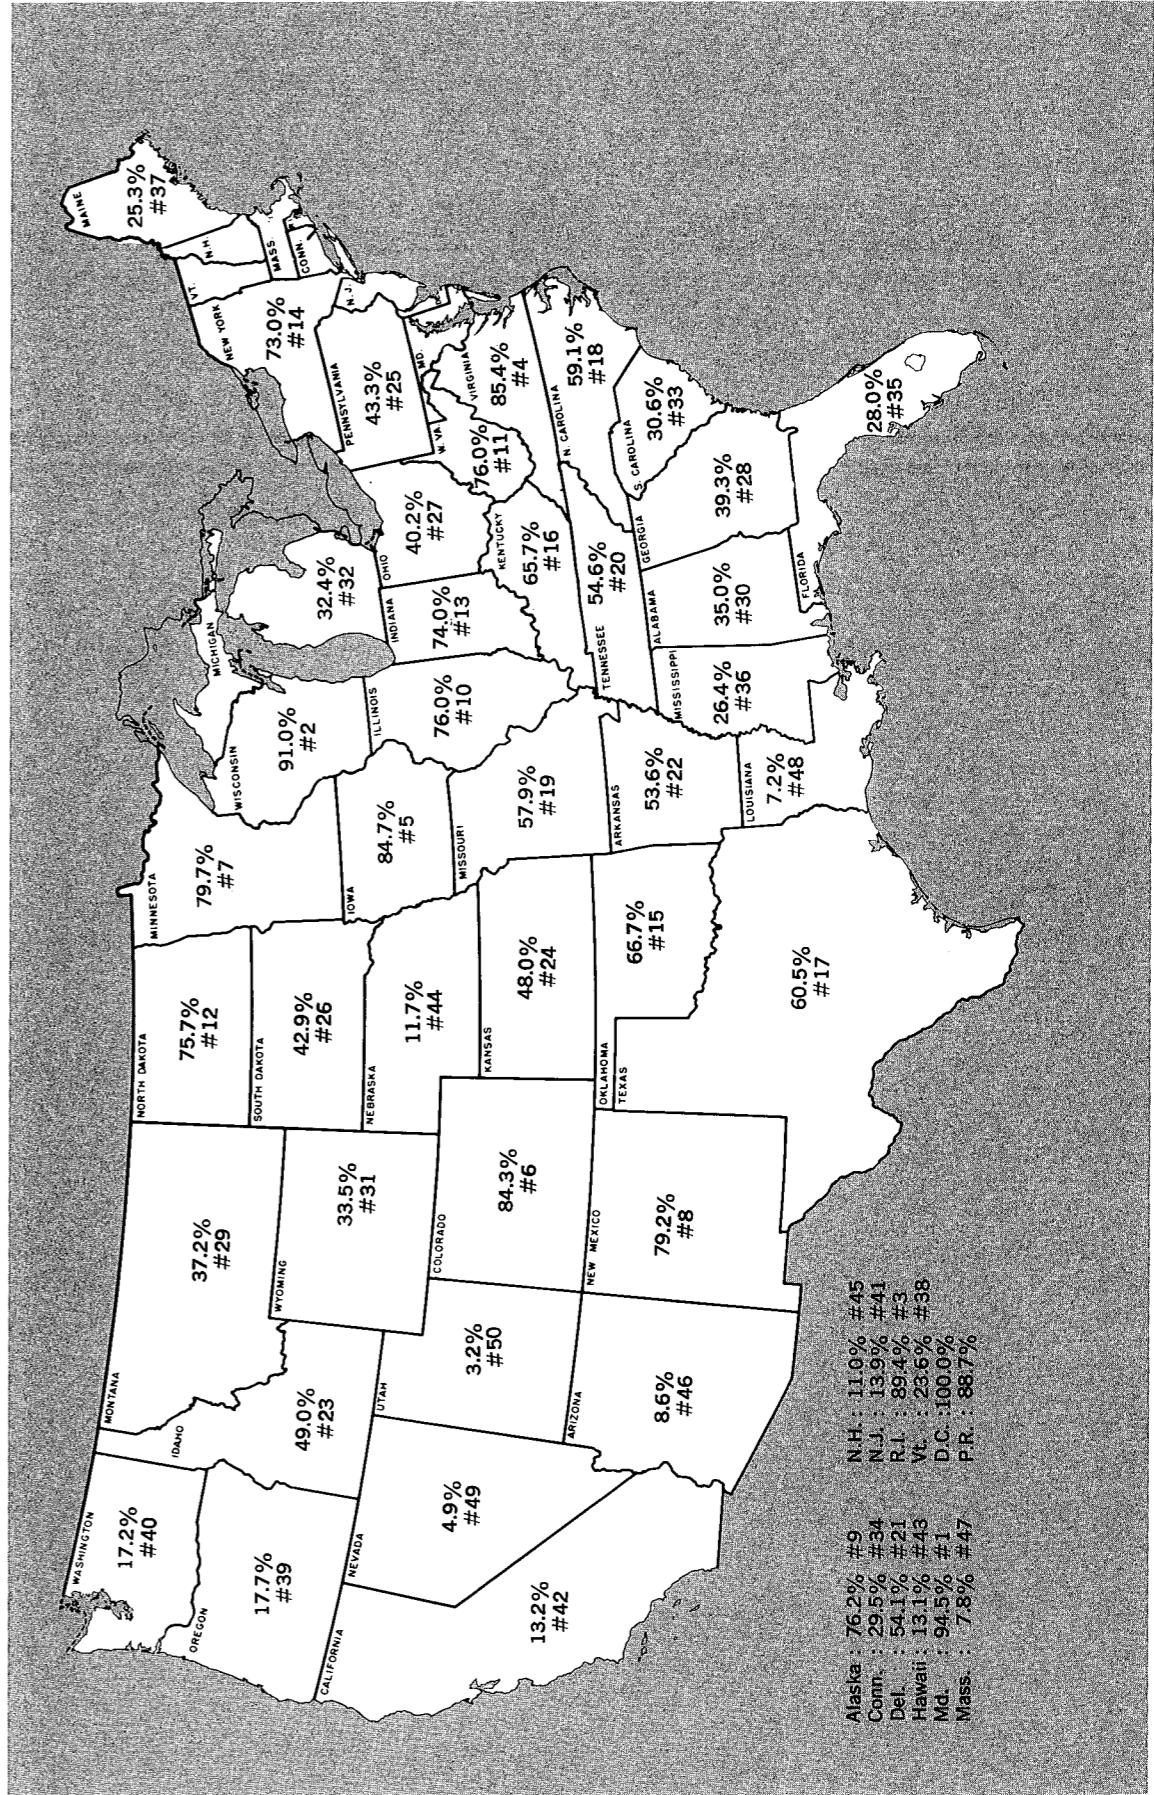

**Public Health Service Publication No. 1670**

**U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE • Public Health Service**

The information presented in this work is based on reports from the department of health of each State. No community is listed nor its population included in the statistical summaries unless the Division of Dental Health, U.S. Public Health Service, has been officially notified by the appropriate State health department. Where a community name appears more than once in the list of fluoridated communities, the population is served by more than one water supplier.

## HOW DOES YOUR STATE STAND ON FLUORIDATION?

The first number in each State refers to the percentage of its population on public water supplies with natural or controlled fluoridation. The second number shows the State's position in a ranking of all States according to percentages. Statistics as of December 31, 1966.

# **FLUORIDATION**

**Census**

**1967 Annual Edition**

**U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE**  
**Public Health Service • Division of Dental Health**  
**Bethesda, Maryland 20014**

## PREFACE

At the year's end, 47 percent of the population that could benefit from fluoridation--those served by public water supplies--were using water containing an adequate amount of fluorides (Table 1). Most of the large cities were fluoridating--New York, Chicago, Philadelphia, Baltimore, Cleveland, Washington, St. Louis, Milwaukee, San Francisco, Pittsburgh, and Buffalo (Table 6). In five states and territories more than 85 percent of the population was using water containing an adequate amount of fluorides--the District of Columbia, Maryland, Rhode Island, Wisconsin, and Puerto Rico (Table 1).

However, most water supplies serve small communities, and few places with populations of less than 2,500 people are fluoridating (Table 6). As a result, states with relatively large numbers of small communities have small percentages of their populations using fluoridated water--Arizona, Louisiana, Massachusetts, Nevada, New Hampshire and Utah (Table 1).

In more than three-quarters of all communities where the water supply is fluoridated, the decision was made by the elected representatives of the people. In less than 10 percent of the areas now fluoridating was the decision to do so taken out of the hands of the governing body by the voters (Table 7).

Where fluoridation is voted upon, the majority of such elections result in the rejection of this public health measure (Table 8). In addition, a vote to fluoridate has not always resulted in fluoridation actually being started (compare "Won," Table 8, with "Referendum," Table 7).

Nearly two-thirds of the water supply systems adding fluorides use one of the silicofluorides-hydrofluosilicic acid or sodium silicofluoride. Less than one-third of the water supplies use sodium fluoride as the fluoridating agent (Table 5).

The annual rate of increase in the population using fluoridated water returned in 1966 to the trend established in 1957 (see cover graph and Table 3). The larger increase in 1965 resulted from the initiation of fluoridation in New York City.

1/ Includes adjustments for population growth based on U.S. Census estimates.

2/ Bureau of the Census: United States Census of Housing; 1960, Series HC (1), Nos. 1-52.

3/ Data on fluoridation reported to Regional Offices of the United States Public Health Service by State Dental Directors. Information on fluoridation in military areas is supplied by the Department of Defense.

4/ Based on 1965-1966 Survey of all communal water supplies having 0.7 ppm or more natural fluoride. For those states which did not submit new information, 1956 data were used.
