

Supplementary Figure 1. Age-standardized five-year net survival (%) for women (aged 15-99 years) diagnosed with cervical cancer during 2001-2014, by SEER Summary Stage at diagnosis.

Footnote: The circles in the figure represent state-specific survival estimates. Open circles represent the state-specific estimate for White women and closed circles represent the state-specific estimate for Black women. The pooled (US) survival estimates for each calendar period are shown by the horizontal (solid) line with corresponding 95.0% and 99.8% control limits (dotted lines)

Supplementary Figure 1.
