Respiratory Virus Data Channel Weekly Snapshot

Provides a summary of the key viral respiratory illness findings for COVID-19, influenza, and RSV from the past week and access to additional information and figures.

Note: data summaries are based on CDC subject matter expert interpretation of publicly available findings across multiple data systems, some of which are not included in the data visualizations on these web pages.

The amount of respiratory illness (fever plus cough or sore throat) causing people to seek healthcare is **low** nationally. This week, no jurisdictions experienced moderate, high, or very high activity.

Reported on Friday, July 12th, 2024.

Summary

Seasonal influenza and RSV activity are low nationally, but COVID-19 activity is increasing in many areas.

COVID-19

Many areas of the country are experiencing consistent increases in COVID-19 activity. COVID-19 test positivity, emergency department visits, and rates of COVID-19–associated hospitalizations are increasing, particularly among adults 65+ and in western states. Recent increases in activity level are from very low levels in May 2024, when they were lower than at any time since March 2020. CDC will continue to closely monitor trends in COVID-19 activity.

Influenza

Nationally, seasonal influenza activity remains low. Additional information about current influenza activity can be found at: [Weekly U.S. Influenza Surveillance Report | CDC](#).

RSV

Nationally, RSV activity remains low.

Vaccination

National vaccination coverage for COVID-19, influenza, and RSV vaccines [remained low for children and adults](#) for the 2023-24 respiratory illness season. [COVID-19 vaccines continue to be recommended](#) and can provide a layer of protection.

Explore deeper data

Wastewater

Wastewater (sewage) data specific to SARS-CoV-2, the virus that causes COVID-19, are displayed at the national, regional, and state levels. These data can provide an early signal of changes in infection levels.

Nursing Homes

Data on COVID-19 cases and deaths among residents and staff of nursing homes are displayed at the national and state levels.

Voluntarily Reported Hospitalizations Data

Weekly trends in COVID-19-related and overall hospital bed occupancy.

Forward Outlook

Estimated trends for COVID-19 and influenza infections and hospitalizations, based on modeling and forecasting, are displayed at the national and state levels.
