**Abbreviation:** Wgt = weighted, EAPC = estimated annual percent change, NA = not applicable.

\*National HIV/AIDS Strategy quality of life indicators are: good or better self-rated health, defined as reporting one's general health at the time of interview to be good, very good, or excellent as opposed to poor or fair; unmet need for mental health services among those with any need, defined as needing but not receiving services from a mental health professional during the past 12 months among all persons reporting receiving, or needing but not receiving, services from a mental health professional; unemployment, defined as being out of work at the time of interview, as opposed to being employed for wages, a homemaker, a student, retired, or unable to work; hunger/food insecurity, defined as being hungry and not eating due to lack of money for food during the past 12 months; and unstable housing/homelessness, defined as moving in with others due to financial issues, moving more than two times, being evicted, or living on the street, in a shelter, in a single-room-occupancy hotel, or in a car during the past 12 months.

†National HIV/AIDS Strategy quality of life Indicator goals are to increase self-rated health to 95% and decrease all other indicators by 50% from their respective baselines by 2025.

§Factors were collected in annual data collection cycles that began June 1 of the cycle year and ran through May 30 of the following year.

¶Coefficient of variation > 0.30, estimate might be unstable and should be interpreted with caution.
