

Obesity Prevention and Control: Provider Feedback

Task Force Finding

Intervention Definition

Provider feedback interventions involve:

1. Assessing health care providers' delivery of weight management screening and treatment to their clients, and
2. Providing feedback on their performance to providers

The provider behaviors that are generally targeted for improvement are:

- Collection and recording of weight-related measures (e.g., weight, body mass index)
- Delivery of advice about weight loss
- Efforts to assist clients in their weight loss attempts

Task Force Finding (October 2007)

The Community Preventive Services Task Force finds insufficient evidence to determine the effectiveness of provider feedback alone to prevent and control obesity among child, adolescent, or adult clients because no studies of suitable quality were available.

The data presented here are preliminary and are subject to change as the systematic review goes through the scientific peer review process.

Disclaimer

The findings and conclusions on this page are those of the Community Preventive Services Task Force and do not necessarily represent those of CDC. Task Force evidence-based recommendations are not mandates for compliance or spending. Instead, they provide information and options for decision makers and stakeholders to consider when determining which programs, services, and policies best meet the needs, preferences, available resources, and constraints of their constituents.
