NIOSH AGRICULTURE BIBLIOGRAPHY

The following bibliography is a list of selected documents on agriculture prepared by the National Institute for Occupational Safety and Health (NIOSH). This bibliography is not exhaustive. However, it should provide the reader with an indication of the breadth and depth of NIOSH activities related to the various facets of agriculture. Additional information may be available on specific agricultural safety and health issues by contacting the address below.

Documents are arranged by type of NIOSH publication, which include numbered publications, contract and grant reports, control technology reports, hazard evaluations and technical assistance reports, industrywide study reports, fatal accident circumstances and epidemiology reports, journal articles and book chapters, testimonies, and miscellaneous reports. A brief description of each publication type precedes the listing of documents in that section.

Most items in this bibliography are NOT available from NIOSH. They must be purchased from the U.S. Government Printing Office (GPO) or the National Technical Information Service (NTIS). Order numbers and prices for paper copy are provided for each item. Microfiche copies are also available from NTIS; prices for microfiche should be confirmed with NTIS before ordering. For your convenience, GPO and NTIS order forms are included at the back of this bibliography. Availability and prices are subject to change without notice. In addition, you may now expedite NTIS orders by telephone facsimile machines. NTIS FAX number: (703) 321-8547.

Numbered publications with the notation "Available from NIOSH" may be obtained without charge from the NIOSH Publications Office. Supplies are limited and availability is subject to change.

To order copies of publications available from NIOSH, or to request safety and health information on specific agricultural topics, write to:

CONTROL TECHNOLOGY REPORTS evaluate effective health hazard control systems and promote the widespread use of these systems through symposia and publications. The field studies begin with preliminary or walk-through surveys to evaluate control systems subjectively to identify those worthy of in-depth study. Generally, few if any air sampling or ventilation measurements are taken during these surveys. In-depth surveys are performed to provide a detailed evaluation of selected control systems. Normally, extensive air samples and ventilation measurements are taken. Work practices and use of personal protective equipment are documented. Also, use of continuous workplace monitoring is noted.

INDUSTRYWIDE STUDY REPORTS represent the results of industrial hygiene field studies that assess whether specific occupational exposures of particular workers are associated with the adverse health effects. The majority of these reports document information obtained during brief 1- to 2-day walk-through surveys at plant sites to evaluate their suitability for industrywide studies. In-depth survey reports present detailed exposure information collected during a 1-week survey of a plant site.
