

**SUPPLEMENTARY TABLE. Test results and duration of hospitalization for patients with clinically diagnosed botulism associated with consumption of home-canned cactus (nopales) — Fresno County, California, June 2024**

Patient *	Latency†	Serum test result, before receiving antitoxin	LOS (days) §
A¶	1 day	BoNT/A detected	25
B¶	1 day	BoNT/A detected	42
C	2 days	BoNT/A detected	5
D	1 day	BoNT/A detected	5
E	2 days	Neg	3
F	1 day	BoNT/A detected	3
H	3 days	Neg	2
I	5 days	Neg	2

**Abbreviations:** BoNT/A = botulinum neurotoxin, type A; LOS = length of hospital stay; Neg = negative test result

\* Two additional patients (G and J) were hospitalized, but botulism was excluded with physical examination and brief inpatient observation

†Days from presumptive exposure until symptom onset

§ Including intensive care unit, inpatient hospitalization, and rehabilitation facility

¶ Intubated because of impending respiratory failure
