

SUPPLEMENTARY TABLE 1. Percentage of vaccines that emergency department patients aged ≥ 18 years had heard of and received and percentage of missing vaccines they would accept if offered in the emergency department, by age group — 10 emergency departments in eight U.S. cities,* April 18–December 31, 2024

Patient age (yrs)	% of vaccines (95% CI)		
	Recommended vaccines that participants had heard of	Recommended vaccines that participants had received	Missing vaccines that participants would accept
Total	84.8 (83.6–86.0)	51.3 (49.6–53.0)	68.2 (65.7–70.7)
18–26	83.6 (81.1–87.1)	54.9 (50.1–54.9)	72.6 (65.2–80.0)
27–49	85.8 (83.9–87.7)	50.3 (47.5–53.1)	65.4 (61.1–69.6)
50–64	85.1 (82.6–87.6)	49.4 (45.9–52.9)	68.3 (65.1–71.5)
≥ 65	83.7 (81.2–86.2)	52.7 (49.3–56.1)	70.8 (65.8–75.7)

* Chicago, Illinois; Detroit, Michigan; Durham, North Carolina; Fresno, California; Los Angeles, California; Philadelphia, Pennsylvania; San Francisco, California; and Sylmar, California
